

Company Profile

Time Doctor is a global leader in workplace time-analytics technology.

What We Do

Our mission is to facilitate the effective management of computer-based employees, while at the same time giving both employers & employees geographic freedom and peace of mind.

Time Doctor provides both high level and granular insight into where & how time is spent in a company. This information allows companies to monitor and encourage employee effectiveness, and to make both HR and time allocation decisions with confidence.

We're most proud of enabling employer-employee relationships that wouldn't have been possible if not for Time Doctor.

Our History

Time Doctor was founded in 2012. Cofounders Rob Rawson and Liam Martin started Time Doctor out of their own need for an effective way to manage the employees of their own previous businesses. Today, Time Doctor has over 50 employees, and thousands of businesses around the world use Time Doctor every day.

Our People

Time Doctor has employees in 14 countries. Thanks to the time analytics software that we've built, most of our employees work either from home or from shared workspaces with no onsite supervisors. The Time Doctor software allows us to effectively manage our own employees remotely.

Our Future

Time Doctor's growth has been steady since our inception. The next milestone in our sights is 1 million users tracking their work with Time Doctor. We'll reach that milestone through the expansion of our medium to large enterprise customer base; primarily technology businesses and BPOs.

Our Customers

Time Doctor's customers range from small tech startups to large enterprises with thousands of employees. A few of Time Doctor's customers:
