

KASM WORKSPACES

The Container Streaming Platform®

Streaming containerized apps and desktops to end-users. The Workspaces platform provides enterprise-class orchestration, data loss prevention, and web streaming technology to enable the delivery of containerized workloads to your browser.

Desktop as a Service

Cloud Workspaces provide users with a consistent and secure computing experience, regardless of their location.

Cyber Threat Research

OSINT collection in disposable workspaces to safely investigate threats and collect data without putting your own systems at risk.

Training and Collaboration

Collaborative development/work environments provide a convenient and secure way for students to learn in a fully configured environment.

Security and Privacy

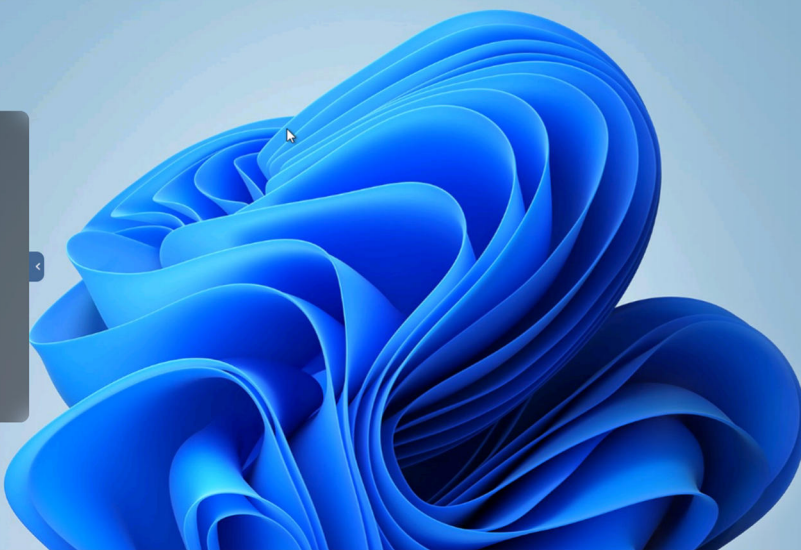

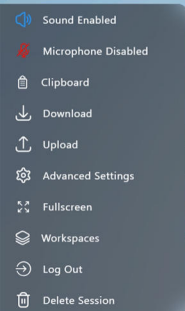

Add a layer of security and privacy to your online hygiene by relegating risky clicks to disposable browser containers. This can help to protect you from malware, phishing attacks, and other online threats.

Jump Box

Bastion host for web-native remote access into your lab without a VPN or software agent, from any device, from anywhere in the world.

Web Isolation and Data Loss Prevention

Provide internet access to users in sensitive environments that protect your private data by restricting upload/clipboard so that your information is secured.

The Next Generation Zero-Trust Solution

Organizations of all sizes and sophistication fall victim to malware and ransomware attacks at an alarming rate. Even with a robust security strategy, it has become clear that current methods of protection such as user education and detection-based technology are not enough.

Zero-Trust Isolation

Kasm moves the attack vector outside of the enterprise adding the ultimate layer of defense. Users access an on demand, remote browser running in a secure sandbox from within their system's native browser. Website code and content are safely rendered inside the remote browser and transmitted back to the user. Kasm secures the enterprise by creating a "chasm" between the user and web threats.

Enterprise Scaling

Kasm uses our Containerized Desktop Infrastructure (CDI) technology to create work environments that are easy to setup/maintain, but also scale to meet even the most complex enterprise requirements. Kasm provides a cost-effective and modern DevOps-enabled approach to traditional Virtualized Desktop Infrastructure (VDI) or Desktop as a Service (DaaS) environments.

Simplified Deployment & Management

The Workspaces environment is fast and simple to deploy, since users stream desktop, browser, and applications directly to their web browser, without needing an agent or application install. Your Remote Workspaces are customized with your applications, configurations, and security controls, providing your workforce with the resources they need, while still maintaining the same control as if they were in the office.

Kasm Technologies is a privately held small business led by a team of offensive/defensive cybersecurity engineers experienced in developing web-native remote work platforms. Their innovative products empower organizations to embrace the flexibility of the digital era while ensuring robust security and efficient operations.
