## How it works?

Finding the best talent is the key to any successful organization, but it doesn't stop at hiring – it's just as important to support new hires beyond day 1, empowering them to be productive and successful in their new role.

Sapling can import all of your candidate data from Lever (yes - all of it!) - streamlining the handoff from recruitment to HR or People Operations.

Using Sapling, you can then coordinate your onboarding program with internal stakeholders and push you data seamlessly into other systems.

This means no more manual data entry or custom third party solutions.

Here is what you can expect

1. Candidate is labelled as Hired in Lever
2. A notification is sent to Sapling that a hiring event has occurred
3. Sapling retrieves the candidates information from Lever, and adds them to Sapling's Pending Hires

## Customer Story: How Apartment List built a streamlined onboarding program with Lever & Sapling

Growing rapidly, Apartment List had limited visibility of what onboarding activities had been completed, what was outstanding, and who was responsible for each activity.

Sapling helped to automate 72 workflows per new hire across multiple stakeholders and departments, saving an estimated 140 emails between employees.
