

Can You Trust Your Data?

(you can now)

RightData has the tools you need to ensure 100% data trust

While businesses focus on streaming vs. batch data, they forget what's really important — trusted, accurate, and verifiable data. RightData is a comprehensive set of data trust tools to monitor data, find problems, and make fixes before it becomes a topic at the next board meeting.

What is RightData Trust?

it's the full set of tools that you need to observe data, use ML to automatically find anomalies, generate business rules, validate data, and reconcile issues. All in one. All code-free.

RightData. Data Trust by Design.

It's everything you need to ensure that the data you're using is accurate and can be trusted for critical business decisions .

1 MONITOR & VALIDATE

RightData Trust has the complete set of tools you need to perform the full set of data observability tasks. Profile data, get quality scores, drill into the details for identified issues, validate, and get alerts when issues are found.

All without the need to write complex code, all in minutes, not weeks.

2 DETECT ANOMALIES

Making full use of machine learning, RightData Trust finds anomalies both in the data itself and in your metadata.

There's no more hoping you didn't miss a critical pattern or trends in your data. RightData finds the anomalies you might have missed. Automatically.

3 AUTO RULE CREATION

Some companies give up on data observability and trust simply because creating all the required business rules manually takes so much time. With RightData, it's all done automatically. Our ML engine profiles your data and suggests rules which you can accept, modify, or discard saving massive amounts of time and finding rules you may never have considered.

Why does everyone from startups to the Fortune 500 choose RightData?

Up & Running Fast

Nothing is faster than RightData when it comes to delivering value. While setting up your data stack can take weeks or months with multiple tools, you're up-and-running in about 15 minutes. And just as fast when you need to add new data sources or APIs to your business

Powerfully Easy

They say you need to write lots of complicated code to do real work with data. We say that's so 2018. Do everything from ingesting, transforming, cleansing, enriching, & predicting with ML in RightData without a lick of code. Welcome to 2023.

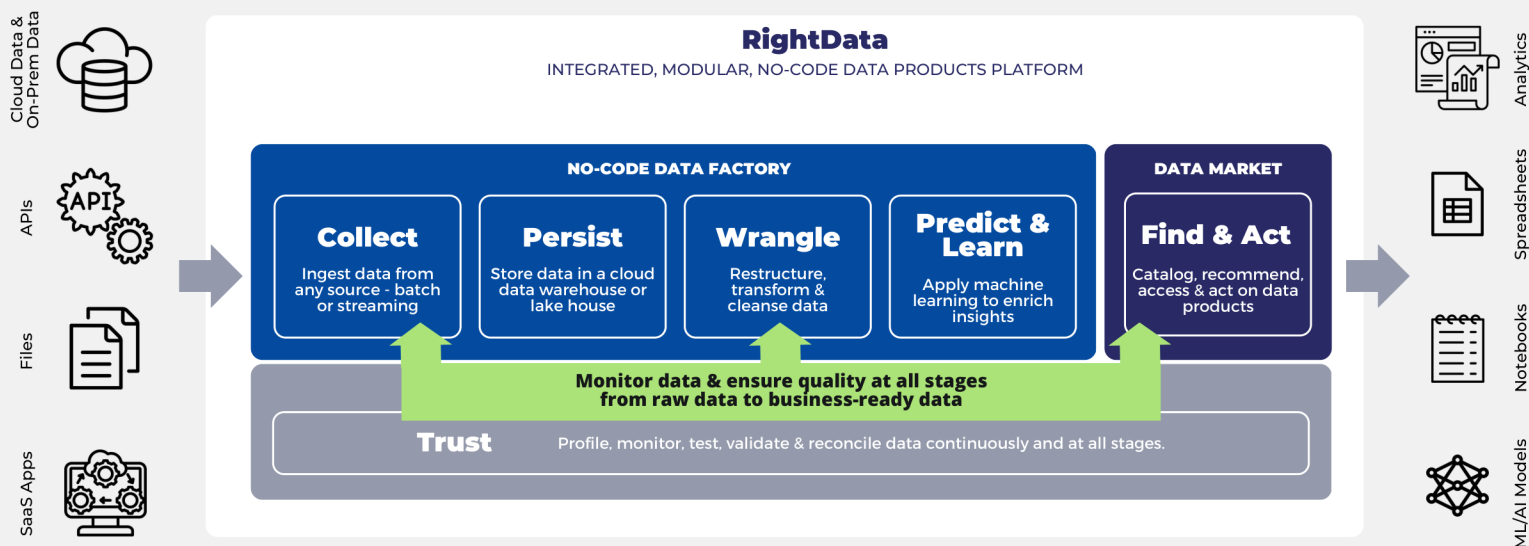

Ready for Business

Business needs more than spreadsheets and bar charts. Teams need to be able to actually find the data available, understand who produced it and when (and where it's from) and above all, they need to be able to know the data is accurate & trusted. Business needs RightData.

"RightData saved us \$5.3 million dollars in annual spending for data quality."

P&G data governance team

One platform. Integrated. Modular. Built for Modern Data Products.

We're RightData.

We're the "modern" modern data stack. Entirely built for data products. Everything you need to go from raw data to business-ready data in a single platform.

Built for Data Products. Built for Trust.
