

On-Screen Takeoff®

Takeoff software that works the way you do—only faster

The takeoff process does not have to involve hours of tedious and repetitive work.

On-Screen Takeoff helps estimators save time and money by creating fast, accurate quantity measurements and calculations for areas and counts as you perform takeoff on your drawings—just point, click, and drag.

Going digital with On-Screen Takeoff can make your work easier and help you simplify your next project.

Get more time back in your day

- Efficiently quantify repeated rooms, floors, and areas throughout the plan set.
- Select multiple takeoff items, draw the takeoff once, and the software calculates all the quantities simultaneously.
- Easily make last-minute updates to quickly account for any change orders on the job.

More accurate bids with a suite of partner products

- Paired with Takeoff Boost™, an artificial intelligence-based add-on feature, perform takeoff measurements on five pages of plans at once - in only 30 seconds.
- Send plans straight from ConstructConnect® Project Intelligence to On-Screen Takeoff for faster project setup.
- Create a detailed estimate, including material costs, labor, and reporting for your takeoffs with Quick Bid®.
- Digital Production Control® helps protect your budget and completion schedule by comparing confirmed work with actual labor hours.

Take the stress out of takeoffs

- Bid areas and zones to allocate takeoff quantities to floors, buildings, phases, etc.
- Plan overlay to compare two versions of a drawing to identify changes. Any changes are color-coded for easy recognition.
- Create notes, project comments, markups, and linked views for better collaboration.
- Calculations automatically saved as you go—stay on track, even with interruptions.
- Access to live and recorded training, video tutorials, and regular in-person classroom sessions.
