

File-Level Backup and Recovery

- Backup data automatically at a rendering application
- Ensure sensitive data is protected with advanced encryption
- Define who can manage or restore backups
- Recover data instantly with a single click
- Maintain operational efficiency with centralized policy management
- Gain actionable insights with comprehensive logs

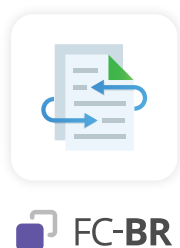

System Flow

In today's digital landscape, the threat of data loss has become increasingly prevalent and sophisticated. Cyberattacks such as ransomware can encrypt and hold critical data hostage, causing severe operational disruptions and financial losses. Additionally, accidental data deletions and system failures further exacerbate the risk of losing valuable information.

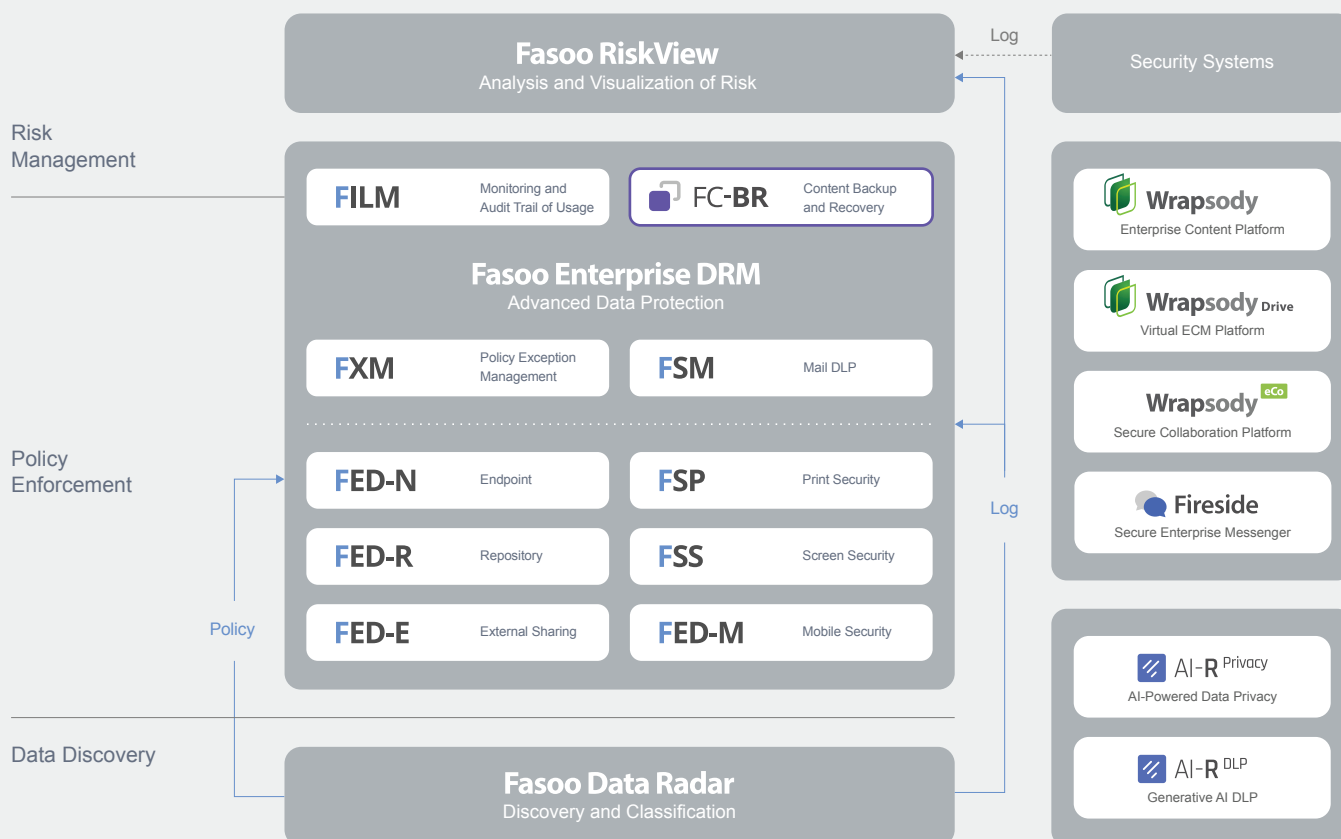

Fasoo Content Backup and Recovery (FC-BR) is a secure, simple, and fast content backup and recovery solution that enables organizations to address ransomware or data loss issues. The solution backs up important files automatically when users save documents on rendering applications. All backed-up files can be restored instantly, and pre-defined users or groups can search or preview the content at any time.

FC-BR

Fasoo Content Backup and Recovery (FC-BR) is an advanced, real-time enterprise backup and recovery solution designed to enhance organizational resilience against ransomware attacks or potential data loss. FC-BR assures persistent data protection and easy recovery by automatically backing up individual documents as soon as they are saved. While its one-click recovery allows for instant restoration of files, minimizing downtime and data loss, its web app content preview feature also improves operational efficiency, allowing quick recovery of target files without going through a full restoration process. FC-BR also provides detailed monitoring of backup and restoration statuses, allowing organizations to gain insights and selectively back up critical files.

About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership position in the unstructured data security market by deploying enterprise-wide solutions for more than 2,000 organizations globally, securing more than millions of users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
