MyPass LMS AT A GLANCE

MyPass LMS brings your entire training ecosystem into one connected platform.

Instead of managing separate tools for course creation and delivery, compliance tracking, member systems, reporting, and proctoring - everything works together in one place.

Courses are created faster with AI. Learners are enrolled automatically based on roles and data. Progress, certifications, and compliance are tracked in real time without manual effort.

Whether you're running certification programs, employee training, or member education, MyPass LMS ensures every part of the process - from content creation to reporting - stays aligned and up to date.

The result is simple:

Less administration, faster execution, and complete visibility across your training operations from day one.

CORE FEATURES

Everything Built In - No Add-Ons Required

Every plan includes the full feature set. No extra modules, no bolt-on pricing, no surprises.

Course Creation & Authoring

AI Course Builder

Generate complete course drafts, module summaries, and assessments from a plain-language prompt. Weeks of instructional design work done in hours

Enterprise SCORM Authoring Studio

Develop professional, interactive SCORM-compliant courses using a full-featured authoring studio comparable to industry-leading tools. Build engaging learning experiences with drag-and-drop interactions, branching scenarios, multimedia, assessments, variables, and responsive content -all within MyPass LMS.

Multilingual AI Translation

Create once, translate automatically into multiple languages via AI. Generate multilingual SCORM packages for global learners without rebuilding programmes.

PPT/PDF/Video to SCORM Conversion

Convert PowerPoint presentations, PDF documents, and videos into interactive SCORM-compliant learning modules without requiring external authoring tools.

AI Image & Diagram Generation

Generate custom diagrams, illustrations, icons, and visual learning assets using AI to enhance learner engagement.

Interactive Content Builder

Design engaging learning experiences using text, images, videos, documents, interactive elements, and knowledge checks within a single authoring environment.

Learning Paths

Create structured learning journeys by combining courses, assessments, instructor-led training, and other learning activities into a single program with configurable completion rules.

ANALYTICS

Learner Progress Tracking

Monitor learner progress across courses, learning paths, assessments, and instructor-led training in real time, enabling administrators to identify completion trends and learning gaps.

Course Completion Reports

Generate detailed reports on course completions, certifications, overdue training, and learner participation to support compliance and organizational reporting.

Assessment Analytics

Analyze learner performance with detailed insights into scores, pass rates, question-level performance, knowledge gaps, and overall assessment effectiveness.

Dynamic Reporting

Create customized reports using configurable filters such as learners, groups, courses, departments, locations, date ranges, completion status, and assessment results without relying on fixed report templates.

Custom Dashboards

Configure personalized dashboards for learners, managers, instructors, and administrators with real-time widgets, KPIs, charts, and actionable insights.

Scheduled Reports

Automate report generation and delivery by scheduling reports to be shared with stakeholders at predefined intervals via email.

Data Export

Export reports and analytics in multiple formats, including Excel and PDF, for further analysis, auditing, and management reporting.

AI CAPABILITIES

AI Course Builder

Generate complete course drafts, learning modules, objectives, summaries, and assessments from simple prompts, significantly reducing course development time while allowing full customization.

AI Survey Generation

Create structured surveys, feedback forms, and evaluation questionnaires from plain-language prompts, enabling faster feedback collection and improved learner engagement.

AI-Assisted Essay Evaluation

Leverage AI to generate preliminary evaluations for essay responses, helping instructors reduce grading time while maintaining full control over final scoring and feedback.

AI Image & Diagram Generation

Generate custom diagrams, flowcharts, illustrations, icons, and other visual learning assets directly within the course authoring environment using AI.

AI Content Enhancement

Improve existing learning content with AI-powered rewriting, summarization, grammar correction, formatting, and instructional content recommendations while preserving the original learning objectives.

AI Translation

Automatically translate learning content into multiple languages and publish multilingual or language-specific learning experiences to support global audiences.

PLATFORM ADMINISTRATION

Custom Branding & White Labelling

Customize the platform with your organization's logo, colors, themes, domain, login pages, email templates, and certificates to deliver a fully branded learning experience.

Notification Management

Configure automated email and in-platform notifications for enrollments, course assignments, reminders, assessments, certifications, and other learner activities.

Help Centre

Provide users with a centralized knowledge base featuring user guides, video tutorials, FAQs, and step-by-step documentation to support self-service learning.

Support Ticketing

Enable learners and administrators to raise, manage, and track support requests directly within the platform, ensuring timely issue resolution and communication.

Security & Access Management

Configure platform-wide security settings including authentication methods, password policies, session controls, and role-based access permissions.

Audit Logs

Maintain a complete audit trail of user activities, administrative actions, system changes, and security events for compliance, governance, and troubleshooting.

Email Templates

Create and manage customizable email templates for notifications, reminders, enrollments, certificates, password resets, and other automated communications.

Assessment & Certification

- **Advanced Question Builder**

Single select, multi-select, yes/no, true/false, essay, and passage-based formats. Built individually or uploaded in bulk via Excel. Organised into reusable question banks.

- **Randomised & Timed Exams**

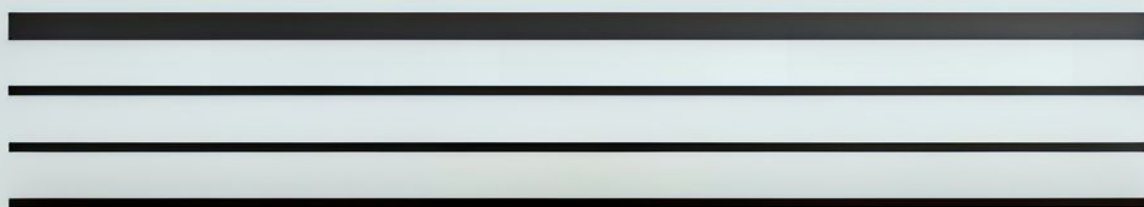

Randomise questions and answers per learner. Set time limits to standardise conditions. Essential for certification programmes and regulated assessments.

- **AI-Assisted Essay evaluations**

AI generates initial evaluations for open-ended responses. Instructors review and override before results are finalised - significant reduction in grading workload at scale

- **Automated Certificates**

Certificates generated and issued the moment a learner meets pass criteria. Fully branded templates. Complete verified record maintained automatically

Instructor-Led Training & Engagement

- **ILT Session Management**

Create and manage classroom or virtual training sessions within the LMS. Blend online and in-person delivery - attendance, completion, and compliance data unified in one record

- **QR Code Attendance**

Learners scan a QR code at session start, no paper sign-in sheets or manual data entry. Attendance links automatically to compliance and completion records.

- **Venue, instructors & Schedule Management**

Manage instructors, locations, room capacities, and schedules within the platform. No separate coordination tools required for live training logistics

- **Surveys & Custom Feedback Forms**

Structured post-session feedback forms. AI generates question sets from plain-language descriptions. Feedback collected at programme level, not just generically

User & Organisation Management

- **Bulk User Onboarding**

Upload and onboard large user cohorts via CSV import or directory sync. Role-appropriate courses assigned automatically, no individual configuration per learner. SSON available if necessary on private and above.

-

- **Groups & Departments**

Segment learners into departments, teams, regions, or certification cohorts. Targeted delivery, granular reporting, and compliance management at scale

-

- **Role-Based Access Control**

Administrators, instructors, group managers, and learners each operate within defined permissions. Sensitive data protected, accidental changes prevented

-

- **Group-Based Course Allocation**

Assign training to entire departments in one action. New group members automatically included in applicable assignments - onboarding stays consistent.

OTHER FEATURES

Learning Management

Deliver structured learning experiences through configurable learning paths, course assignments, mandatory and recurring training, automated enrollment rules, prerequisites, completion criteria, and real-time learner progress tracking to support onboarding, compliance, and continuous development.

Marketplace & Ecommerce

Offer a complete eCommerce solution with a branded course marketplace, searchable course catalog, shopping cart, secure payment gateway integration, subscriptions, coupons, digital product sales, order management, and comprehensive sales analytics to monetize learning offerings.

Gamification

Increase learner engagement and motivation through a comprehensive gamification engine featuring points, badges, leaderboards, achievements, learning challenges, rewards, and recognition programs that encourage continuous learning and improve course completion rates.

Platform Administration

Manage and configure the entire learning platform through a centralized administration console with custom branding, white labeling, notifications, help center, support ticketing, security settings, audit logs, email templates, and system-wide configuration tools to streamline administration and enhance the user experience.

Integrations

Seamlessly connect MyPass LMS with HR systems, Association Management Systems (AMS), CRMs, virtual classroom platforms, content providers, Single Sign-On (SSO), REST APIs, and webhooks to automate data synchronization, streamline workflows, and create a connected learning ecosystem.

DIGITAL RIGHTS MANAGEMENT

Enterprise Content Protection - Built Into the Platform

Protect proprietary training materials from unauthorised access, copying, and redistribution - regardless of how or where learners access content.

As organisations invest in high-value certification programmes, compliance frameworks, and proprietary courseware, DRM ensures content cannot be redistributed outside of explicitly authorised conditions. MyPass LMS implements DRM at the infrastructure level.

Why Organisations Need DRM

Content at Risk Without DRM

- Certification study materials shared between candidates,
 - undermining programme value.
- Compliance documents redistributed beyond authorised personnel
 - - regulatory exposure.
- Proprietary frameworks and methodologies copied and used by
 - competitors.
- No audit trail when sensitive materials are accessed on
 - unmanaged devices.

What DRM in MyPass LMS Delivers

- Content access restricted to explicitly authorised devices and sessions.
- Documents delivered in a protected viewer - no download, no copy, no print.
- Access windows, view limits, and expiry configured per content item.
- Full audit trail of every content access event for compliance and enforcement.

DRM Features

- **Protected PDF Distribution**

Share sensitive documents in a protected environment where downloads and redistribution are restricted. PDFs render in a controlled viewer - ideal for compliance frameworks, legal materials, and proprietary content where redistribution is a regulatory or contractual risk

- **Device-Level Access Control**

Content accessible only on explicitly authorised devices. This layer operates beyond login credentials - critical for regulated training content that cannot be accessed from unmanaged endpoints or personal devices.

- **Secure Document Reader**

Training materials delivered through a controlled interface that prevents copying, printing, and screen extraction. Learners access content securely without friction that disrupts the learning experience.

- **DRM Policy Management**

Configure granular access policies per content item or category. Set access windows, view limits, sharing permissions, and expiry conditions. Full administrative control without restricting legitimate learner access.

- **Encryption & Key Rotation**

All training content protected with industry-standard encryption. Periodic key rotation ensures long-term security even if credentials are compromised - meeting enterprise and regulatory data protection requirements.

- **Content Watermarking**

Bind each distributed copy to the learner account that accessed it - visible or invisible watermarks. Enables traceability of any unauthorised redistribution back to the source record for audit and enforcement.

Typical DRM Use Cases

Professional Certification Bodies

- Examination materials, study guides, and proprietary frameworks protected from sharing beyond enrolled candidates.
- Premium certification content retains value and exclusivity throughout the exam cycle.
- Audit trail available for any compliance query or investigation

Regulated Industry Training

- Healthcare, financial, and legal compliance content accessible only to authorised personnel
- Contractual and regulatory requirements for content access control met technically - not just by policy.
- Device-level controls enforce access boundaries regardless of learner location

VIRTUAL EXAM PROCTORING

AI-Powered Exam Integrity - Native to MyPass LMS

Enterprise-grade exam integrity monitoring activated as a toggle on any assessment. No third-party portals, no LTI configuration, no per-seat licensing.

Virtual proctoring in MyPass LMS operates across three sequential detection layers, providing increasing levels of confidence in exam integrity, from AI Object Detection to real-time monitoring through AI-powered verification to admin review.

The entire workflow runs within the platform

Detection Architecture

Real-Time Monitoring (DURING EXAM)

- Webcam recording, heartbeat monitoring, and tab-switch detection run continuously. AI object detection analyses webcam frames every 5 seconds, identifying phones, books, additional persons, and camera obstruction as they occur.

AI Verification at Submission (ON EXAM)

- All captured frames are sent to an AI Vision model in a single batch call on exam submission. The AI independently assesses each frame, confirms genuine violations, and clears false positives, giving administrators a clean two-bucket view: confirmed violations and AI-cleared frames.

Admin Review Interface (DURING EXAM)

- Administrators see confirmed violations highlighted separately from AI-cleared frames. Per-frame AI reasoning displayed alongside each incident. Video playback, evidence frames, and a full event timeline make review fast, definitive, and audit-ready

Key Advantages

- **60–80% Cost Savings**

Compared to Examity, ProctorU, and Honorlock. No per-seat licensing, pay only for proctored exams, not for the entire registered user base

- **Native LMS Integration**

Proctoring is a toggle on each assessment, no third-party portal, no LTI configuration, no separate learner login. The entire workflow runs within MyPass LMS.

- **Zero False Positive Burden**

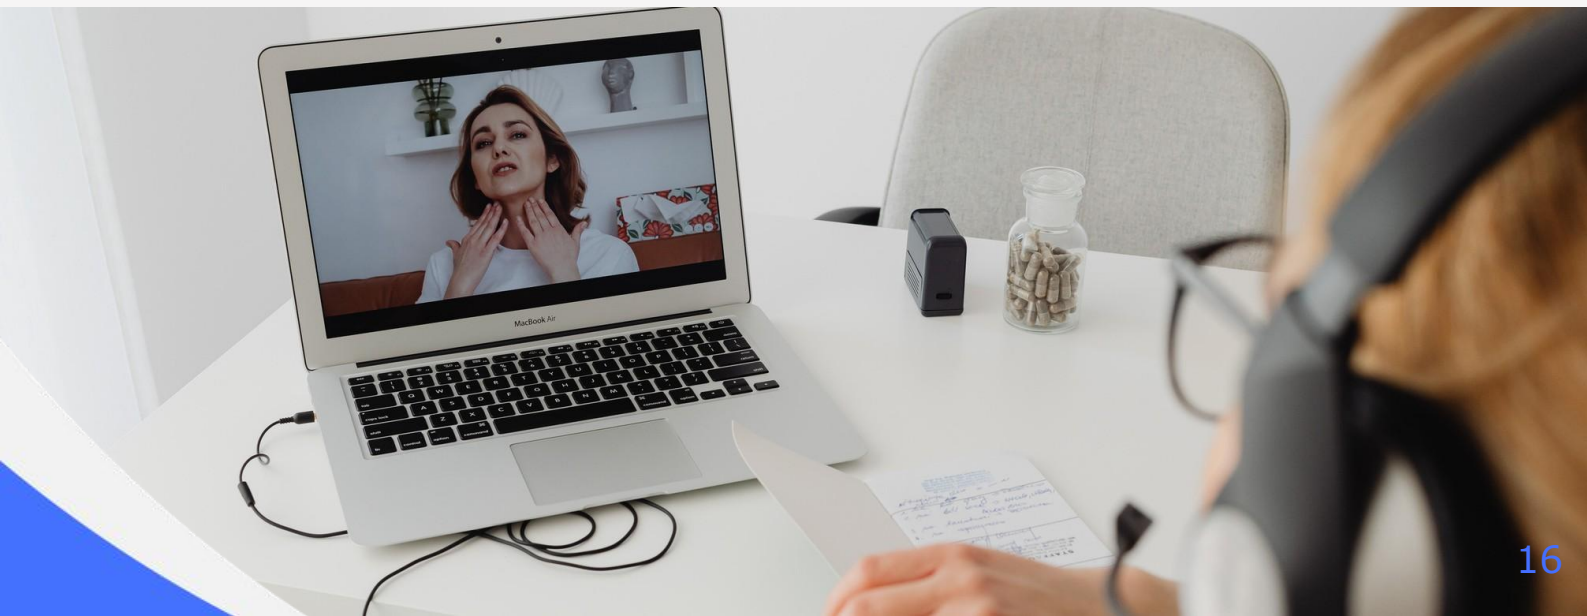

AI verification at submission separates genuine violations from false alarms before administrators review, reducing admin review time by up to 80%

- **Scalable Infrastructure**

Recordings stored on AWS S3 with AI processing on demand. Handles 10 or 10,000 concurrent exams without advance capacity planning.

- **Privacy-First Design**

Webcam data stays within the MyPass LMS infrastructure. Configurable retention policies define how long recording data is held after exam completion

AMS & HR SYSTEM INTEGRATION

Real-Time Bidirectional Sync, No Middleware Required

When member or employee data changes in your connected system, MyPass LMS responds immediately. No CSV exports. No manual reconciliation. No duplicate data entry

How the Connected Workflow Operates

Your AMS Sends

- Membership status and tier
- Chapter and committee affiliation
- Board roles and credentials
- Renewal dates and lapse status
- Profile, cohort, and contact data

MyPass LMS Responds

- Enrolment rules fire automatically
- SSO access granted via AMS credentials
- Learning paths assigned by tier or role
- CE hours recorded and synced back
- Renewal reminders sent on schedule

ANALYTICS & AI

Real-Time Data and Intelligent Automation

Live visibility into every learner, programme, and compliance status - combined with AI that executes training workflows, not just suggests them.

Analytics & Reporting

- **Learner Progress Tracking**

Individual and group progress across all courses and programmes in real time. See who is on track, who is falling behind, and where content is causing completion drop-off, enabling targeted intervention before rates decline.

- **Course Completion Reports**

Detailed completion data per course, programme, or cohort. Evidence for demonstrating programme ROI to leadership, funders, and accreditation bodies, generated on demand, not manually compiled

- **Assessment Analytics**

Individual and cohort-level assessment results surface knowledge gaps and performance trends. Data informs content revision, remedial training decisions, and whether programmes deliver measurable outcomes

- **Dynamic Reporting**

Filter and generate reports across any dimension, learner, group, date range, course, completion status, or score. Administrators get the specific data they need without navigating fixed report templates

PRICING

Active User Pricing - Pay Only for Engagement

Unlike traditional platforms that charge per registered user, MyPass LMS bills only for users who log in and engage during a billing period. Idle accounts are billed at zero.

Pricing Tiers

Shared Hosting

\$63/mo Billed Annually.

Or

\$79/mo Monthly Billing

- Unlimited registered users
- Designed for orgs up to 500 users
- Up to 50 simultaneous logins
- Shared managed hosting
- All LMS features included
- Kprise-managed updates
- Basic monitoring
- Standard support
- Backups included

Private Hosting

\$249/mo Billed Annually.

Or

\$319/mo Monthly Billing

- Unlimited registered users
- Up to 1,000 simultaneous logins
- Dedicated hosting environment
- Own SSL & subdomain
- All LMS features included
- Kprise-managed upgrades
- Priority support
- Advanced monitoring & backups

Enterprise

Custom

- Unlimited registered users
- Custom simultaneous-user capacity
- Multiple servers for high availability
- Load balancing
- Dedicated support
- Custom workflows & integrations
- Advanced security review
- Custom SLA
- Implementation & migration support
