

Salesforce Backup & Recovery

Comprehensive Salesforce data backup and recovery that minimizes data loss, supports regulatory compliance, and builds business resiliency.

Salesforce Data Loss Can Happen To You

Here are a few instances in which cloud data can become lost data:

- User error
- Malicious end-user activity
- Administrative errors
- Misuse of vendor tools
- Application service failure
- Viruses or ransomware

Easily Backup, Restore, and Recover Your Salesforce Data

Defend yourself from almost any data loss scenario with Sesame Software's Relational Junction backup and recovery solution. With Relational Junction you can:

- ✓ Protect your data, including metadata, custom objects, attachments, files, documents, etc. - with automated backups throughout the day, all day!
- ✓ Restore Salesforce data quickly at any level of granularity or size - whether it's one record, a complex hierarchy of data, or your whole org.

Keeping You Compliant

Regulatory Agencies

- SEC
- FDA
- HHS Health Insurance
- EU, UK Data Commissioner

Regulatory Environment

- Sarbanes-Oxley
- HIPAA and 21 CFR Part 11
- SEC Rule 17A
- Data Protect Act

Turnkey Data Protection

Recovery solutions typically provide you with text files of your data, making the actual recovery process your problem to solve. This method is time consuming and does not ensure business continuity or the ability to perform a full recovery of all data, as well as limits the frequency of recovery.

With Relational Junction, your data is backed up throughout the day and is always available for fast point-in-time, granular restoration whenever needed. Incremental backups of your Salesforce data are performed throughout the day - not just once a day - and keep every version of every record at any time of synchronization.

All-Inclusive Backup

- Protect all your data, including custom objects and relationships, standard objects, knowledge articles, attachments and files
- Safeguard business data with automatic, daily backups and configurable, high-frequency transactionable object backups
- Efficiently store data in secure databases, not in text flat files
- Records can be backed up both historically and incrementally

Rapid Recovery

- Recover all of your data, metadata, and relationships quickly, at any scale and granularity
- Save time by selecting which data needs to be recovered at the Org, Record, and Field levels, including the option of single-record or multi-record recovery
- Recover data from any point-in-time, no matter when it was lost, changed, or corrupted, including the option of a complete data restore

Complete Compliance

- Fully compliant with all industry mandates
- Secure critical business data to meet stringent privacy and security policies with advanced authentication, encryption key management, and access controls
- Access full audits for all updated records

Premium Performance

- Accelerates operational cycles with faster backups for large tables
- Capable of handling large numbers of records on multiples objects
- Handles up to 2,000 records per API call
- Does not need to have multiple snapshot versions to perform a restore

About Sesame Software

Sesame Software is the Enterprise Data Management leader, delivering data rapidly for enhanced reporting and analytics. Sesame Software's data platform offers superior solutions for data warehousing, integration, as well as backup, and compliance to fit your business needs.
