

Issue Management

Manage and mitigate risk, vulnerabilities, issues and incidents from all sources

Track Issues from Multiple Sources

Self-identified, audit, vendor, vulnerability sources reported and tracked on a single pane of glass.

Automated Reporting, Alerts and Notifications

Alerts, notifications, escalation and real-time reporting for all active issues.

Empirical Data-Driven Reporting

Confidently report-up and command your active risk environment with empirical data, updated in real-time on custom dashboards.

GRAPH Open API

Integrate with JIRA for issue management, vulnerability scanners (Rapid7, Tenable, Qualys, and business systems for continuous monitoring).

"The wide range of capabilities makes it useful for every scenario we have encountered as a business. It is modeled to serve our company's needs perfectly."

— Forrest A. Director of Business Operations

Simplify

Simple to deploy and easily connect with all your existing enterprise applications.

Automate

Automated Risk, Compliance Audit and CyberSecurity processes for all industries.

Elevate

A single, integrated, interconnected system designed to be the ONE source of truth for risk in your organization.
