

PROJECTPLACE FOR YOUR ENTERPRISE

How do you work? Chances are, you have structured projects, many of which are planned in advance, with resources and milestones mapped out.

But the majority of most peoples' time is often taken up with the day-to-day work that makes a company run: ad-hoc projects and unstructured work, with tasks, meetings, and communications.

Many organizations have software solutions for structured projects. But when it comes to the work that takes up most of your time, few organizations have tools that address it effectively.

Projectplace® was created to support the project collaboration being done by teams across your enterprise.

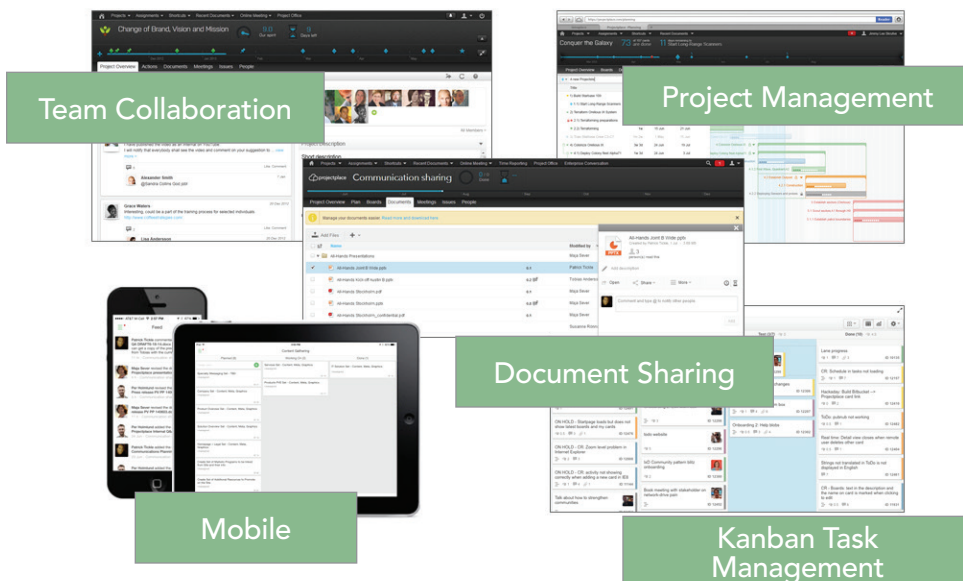

Project collaboration for your enterprise

Projectplace was created to support goal-driven team collaboration across your enterprise. Its intuitive approach empowers teams no matter where they are to deliver work on time.

Get started in just minutes with this secure and scalable tool that lets you:

- Empower your teams to self-organize
- Plan and execute projects with integrated Gantt charts and intuitive Kanban boards
- Streamline document collaboration with robust sharing, security, and version control
- Collaborate easily across and beyond the enterprise – inside your department or with external stakeholders

Projectplace for the Enterprise

Get a complete overview of who is doing what and when.
All in one place. Always accessible – from any device.

It's time to collaborate.

A recent project management survey shows that achieving success has never been so tough. Participants report:

Overruns

- One in Five: Projects that run late
- One in Seven: Projects that run over budget

Inefficiencies

- 43%: No document version control
- 37%: Lack of team communication
- 38%: Searching for emails as a top pain point
- 20 days/year: Wasted time due to inefficient processes

Better collaboration tools can result in big gains:

- 82% less time wasted
- 71% stronger sense of team
- 74% fewer project delays
- 69% better control of costs

Empower your teams to self-organize

People are at the core of their project. Empower your teams to self-organize with Kanban boards. Get activity notifications, messaging and visualize progress of day-to-day tasks. For team leads, building a virtual team is seamless. Member management ensures everyone has access to the content they need to get the job done while avoiding information overload.

Plan and execute projects

Execute projects on time and manage teams, task, and deadlines. Gantt charts in Projectplace represent your project with all its major steps, from inception to completion to provide insight into the progress of project deliverables.

Kanban boards provide a visual representation of the project work stream and enable project members and stakeholders to easily understand who is doing what, and the current status of work items in the project. When combined with the Gantt chart, the powerful Gantt Reinvented feature enables teams to connect work stream items on boards and cards to the scheduled activities and milestones in the overall project plan. This novel combination enables teams to move communication out of siloed emails and gives all members a more visual and complete understanding of project scope, status, milestones, and issues.

Streamline document collaboration

Projectplace document sharing enables team members to attach relevant files directly to Kanban boards from their computers or handheld devices, the Projectplace document repository, or from third-party document sources such as Dropbox™, Box™ and Google Drive™. Documents within Projectplace are managed with enterprise-grade security in the cloud, and can be accessed via mobile or desktop device for convenience.

Real-time updates ensure changes are visible immediately and version control ensures that team members see the latest document versions with access to document history and changes as needed.

Collaborate easily with stakeholders

Keep apprised of project status and updates with the Projectplace apps for iOS and Android. With these mobile apps you can access your projects, update the status of your assignments, review documents and collaborate with team members from wherever you are with your smartphone or tablet.

Rely on enterprise-class cloud service

The Projectplace cloud infrastructure was developed with the exacting needs of your enterprise in mind:

Security

- SSLv3/TLS 256-bit encrypted communications
- AES-256 document encryption
- ISO-27001 certified

Assurance

- 99.98% uptime since 2004
- Multi-layer redundancy
- Web acceleration via CDN

Control

- Role, group, and folder-based access control
- Complete audit logging, monitoring, and traceability
- SAML and Active Directory for Single Sign-on

One Portfolio: Planview Enterprise + Projectplace

Projectplace brings a new level of collaboration to any team. When integrated with Planview Enterprise®, you get the most complete approach to portfolio and resource management. It allows you to see one portfolio that spans traditional and collaborative projects, creating an enterprise-wide view of resources – No Matter How You Work.™
