

Stop guessing. Start knowing.

Your CRM tells you who your accounts are. Lusha tells you who to reach, when to reach them, and who else looks just like them. The Lusha Data APIs deliver verified contacts, real-time buying signals, and lookalike recommendations directly into your systems. No manual research. No stale lists. Just intelligence that keeps your pipeline moving.

Two APIs. One system.

SIGNALS API – KNOW WHEN TO ACT

Get real-time buying signals the moment they happen. Job changes, promotions, hiring surges, headcount growth—delivered straight to your CRM or automation tools.

01

WHAT YOU GET:

- Contact signals: job changes, promotions
- Company signals: hiring surges, headcount growth

02

WHAT YOU CAN DO:

- Score and route leads when they're warm
- Re-engage past buyers who switched roles
- Catch churn risk before it becomes a problem
- Expand into accounts showing momentum

03

ENDPOINTS:

- [/signals/contacts](#) – Enrich contacts by ID
- [/signals/companies](#) – Enrich companies by ID
- [/signals/contacts/search](#) – Search and enrich by email, LinkedIn, or name + company
- [/signals/companies/search](#) – Search and enrich by domain or company name
- [/signals/filters](#) – View available signal types

Recommendations API – Find more of your best buyers

Turn your best customers into lookalike target lists. Send the API a set of contacts or companies, and it returns similar profiles—same roles, same seniority, same company type.

WHAT YOU CAN DO:

- Build lookalike lists from closed-won deals
- Expand within key accounts (land and expand plays)
- Generate ABM target lists from your top customers

ENDPOINTS:

- [/api/recommendations/contacts](#) –
Get similar contacts
- [/api/recommendations/companies](#) –
Get similar companies

How it works

Both APIs use the same framework: HTTPS-only, JSON requests, authenticated with your API key. Start with IDs, emails, domains, or LinkedIn URLs—whatever you have—and the APIs return verified data with the context you need.

Authentication:

Header: api_key:
YOUR_API_KEY

Get your key:
[dashboard.lusha.com/api](#)

Flexible inputs:

Use Lusha IDs or identifiers like emails, domains, and LinkedIn URLs.

Built for workflows:

Works with your CRM, MAP, automation tools, and any system that needs enriched data.
