Introducing Ideagen Plant Assessor

**Easy-to-use machinery safety and
compliance software**

Helping businesses operating or supplying
machinery meet compliance, keep people safe,
and improve operational productivity.

Our **why**

Safe machines, safe people

We believe safety is paramount, and at Ideagen Plant Assessor, we're dedicated to ensuring everyone working with machinery returns home safely.

Our purpose is to provide easy to use software that simplifies the complex task of managing machinery safety and empowers individuals to identify and avoid potential hazards.

Benefits of using Ideagen Plant Assessor

//

Plant Assessor is the only solution that I have seen that considerably reduces the subjectivity of the plant risk assessment process.

Larry Green, General Manager
Plant - (WA) Downer

Protect your people and your business

Ensure the safety of your workforce and safeguard your business from legal and financial liabilities with our comprehensive machinery safety solution. Stay audit-ready with organised record-keeping, facilitate communication of safety information from office to site, and gain peace of mind knowing your machinery compliance is fully under control.

Reduce the admin burden

Say goodbye to paperwork with our pre-built machinery risk assessments and automated risk analysis. With built-in machinery expertise and legislation knowledge specific to your state of operation, reduce subjectivity and ensure consistency across your compliance and record-keeping.

Improve safety and meet compliance

Gain real-time visibility of on-site machinery compliance across your fleet for data-driven decision making. Couple this with our comprehensive risk management reports that recommend hazard controls, you'll know exactly what to do to get your machines up to spec.

Machinery Risk? **We've got you covered.**

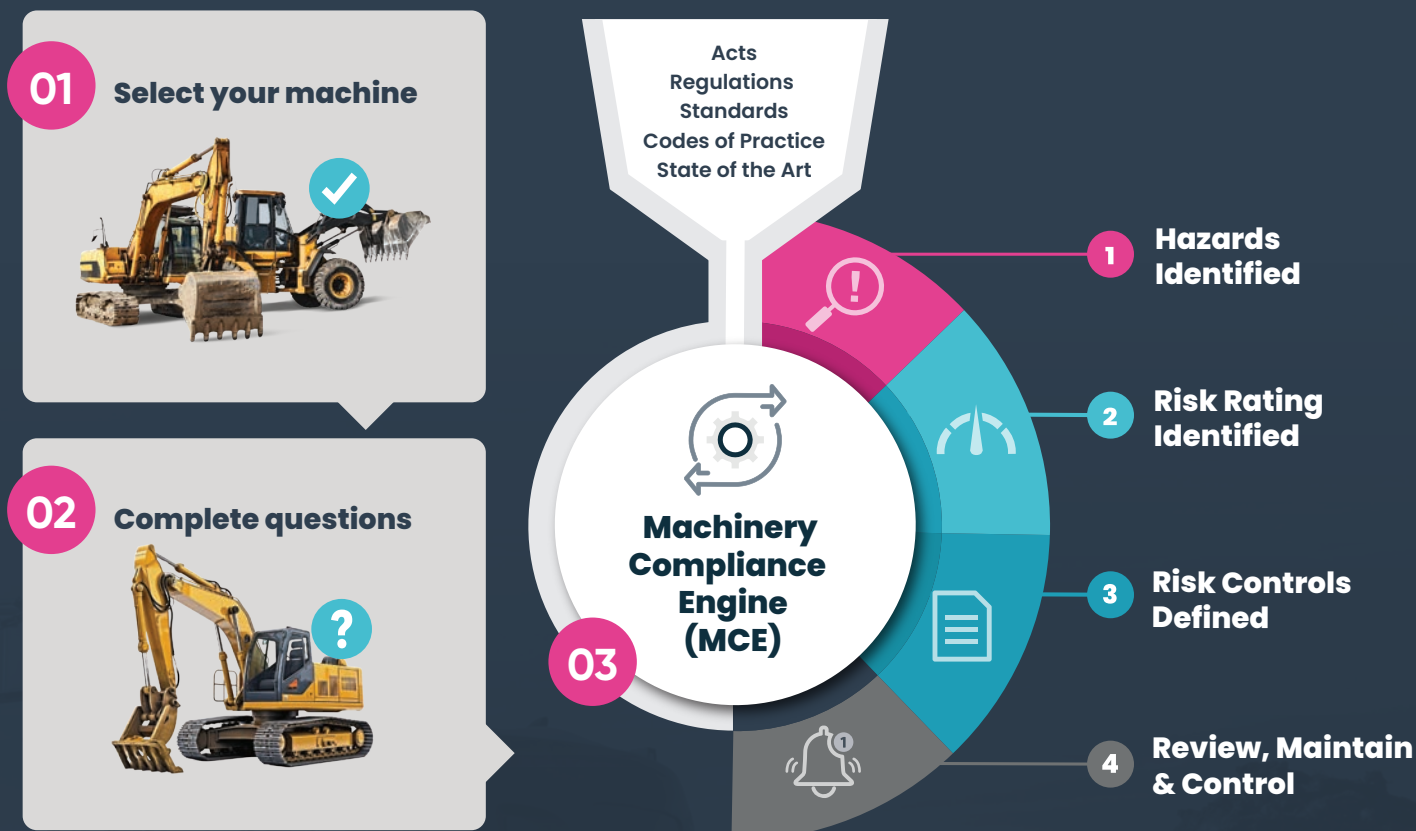

Introducing the Machinery Compliance Engine (MCE)

Driven by sophisticated technology, the Machinery Compliance Engine takes control of the analysis process of risk assessments, referencing current legislation, WHS Acts, Regulations, Standards, and Codes of Practice, industry leading practices and the application of the hierarchy of controls.

The result is an automated risk report that provides a clear action plan to compliance.

How the MCE works

Products and services

When it comes to machinery compliance, there are a lot of moving parts. Ideagen Plant Assessor provides businesses operating or supplying machinery all the tools to easily manage every aspect of compliance, and help ensure their safety obligations are met.

Risk assessments

Ideagen Plant Assessor empowers those with limited legislation experience to complete a thorough risk assessment across a database of over 120k machines.

The automation of hazard identification, risk rating application and recommended control measures for each machine helps to reduce subjectivity. Users can have confidence that risk assessment processes are thorough, consistent, hazard controls are relevant, and that they are compliant to the latest letter of legislation.

Corrective action management

Know the hazards and how to control them with automated risk management reports generated by the MCE that consider all legislative requirements, regulations, Australian Standards, Codes of Practice and industry best practices.

Use the actions dashboard in Ideagen Plant Assessor to monitor, manage and resolve outstanding actions – and keep detailed records.

Document management and storage

With Ideagen Plant Assessor's digital library, cut out the paper chase by keeping all documents related to your machinery compliance in one place. This ensures documents are instantly available when they're needed for reference or in case of an incident. Document requirements can be set and requested as part of pre-qualification and machinery supply processes.

Site and contractor management

MySite makes it easy to stay on top of every machine's legal requirements.

You can establish site requirements in advance, pre-qualify machines based on their supplied documentation, and get real-time visibility of machinery compliance across multiple work sites.

Service scheduling and recording

Never miss another service, with scheduling and alerts to keep your machinery running at peak performance. Upload service records, and keep them in one place – ready to download, share or store.

Professional Services

Assessing your fleet, and setting up your machinery compliance processes can take time that you don't have.

Leave it to our expert team of machinery and compliance professionals, available to come to your location, assess machinery, complete risk assessments and fully set up your entire compliance management processes.
