# Canfigure.

CMDB Module

The Canfigure Configuration Management Database (CMDB) provides a central repository for capturing all of your asset data and relationships. Using the powerful query and reporting capabilities, the CMDB will tell you where an asset is, who is using it and what it relies on. With out-of-the-box support for all IT-related asset types, the CMDB can also be extended easily to capture for any other type of asset, referred to as a Configuration Item (CI).

Using built-in admin functions, you can build your own forms, menus and customize all aspects of the system. Excel data can be imported to rapidly populate the database and APIs are available for automated data feeds.

Optionally add integrated **Change Management** to provide multi-level approval and notification for changes affecting your infrastructure.

Canfigure CMDB key features:

- ✓ Role-based security
- ✓ Multi-tenancy
- ✓ Active Directory integration
- ✓ Application Management

- ✓ REST API
- ✓ Integrated Change Mgmt
- ✓ Custom CI Types
- ✓ Auto-discovery integration

- ✓ ITIL Compatible
- ✓ Dynamic reporting
- ✓ Modular options
- ✓ Import/Export tools

Canfigure is a 100% web-based application that can be installed on your internal network, or accessed via our secure cloud infrastructure. Visit http://www.canfigure.net for more information and to register your interest!
