

Your knowledge, connected and optimized.

Semedy provides integrated knowledge management solutions for a wide range of industries including Healthcare, Financial Services, Customer Service and Technology. Semedy's Knowledge Management Software (KMS) offers a centralized repository and workspace for all types of knowledge assets, from simple documents to complex ontologies. Semantic reasoning allows you complete control over interdependencies as you create, collaborate and publish your assets.

ABOUT

Semantic Connections

A semantic reasoner is integrated to allow sophisticated search, inference and validation of assets in the system.

Manage Dependencies

Keep track of dependencies between your knowledge. Identify inconsistencies quickly and have more control as interdependencies change over time.

Collaboration Tools

Semedy's system encourages a collaborative approach. Give members of your team tools to help communication and transparency.

Authoring & Curation

Knowledge authoring and curation capabilities. Create new entities and revise existing entities.

Import & Export

Spend less time recreating existing knowledge. Customize and automate the integration process with Extract, Transform, Load (ETL) pipelines

Version Control & Lifecycle

Follow a standardized or customized lifecycle from creation to publication. Allow revisions of your knowledge to coexist in different lifecycle states so you keep track of all versions.

FEATURES

- ✓ Multi-language support
- ✓ Visualization tools
- ✓ Access control
- ✓ Cloud-based or on-premise
- ✓ Subscriptions & notifications
- ✓ Intuitive search functions
