

# Process Management

Identify, map, and model your processes more easily than ever. Process Management for the Nintex Automation CE platform helps you better manage and optimize your processes, driving greater efficiency and compliance and giving you control over how work gets done.

## Why Process Management

Keeping your processes standardized, compliant, and adaptable can be hard in a regulation-heavy landscape. The lack of clear, standardized processes can leave your team struggling to communicate effectively, address bottlenecks, identify automation opportunities, and comply with changing regulatory requirements.

Traditional, manual process documentation methods can cause silos and inconsistencies that lead to operational delays, audit issues, and costly penalties. You need a way for your teams to quickly capture, document, manage, and improve processes – from the simple to the complex.

Nintex Process Manager tackles these challenges head-on by allowing you to identify, map, model, and then manage your processes and improve them over time.

Turn complex, siloed workflows into clear, controlled, and accessible process maps in minutes. Now your teams can own and improve their processes, reducing employee confusion and ensuring compliant workflows.

Avoid hours of tedious documentation and generate AI-powered process maps from user activity recordings or simple text prompts. Leverage tools that make it easy to spot risks. Nintex Process Manager empowers you to standardize, control, and continually improve your workflows, enhancing compliance, efficiency, and team collaboration.

## Business Benefits\*

**70%**

improved process visibility, consistency, and control.

**30%**

savings on process related costs.

**40%**

reduction in process deviations

**85%**

of Nintex customers agree that Process Manager is critical for managing risk and compliance.

**20%**

reduction in service delivery times, enhancing customer satisfaction and loyalty

\* Metrics based on results seen by active Nintex customers.

“

We can standardize while also making allowances for variations and regulatory compliance requirements by location, which has sped up our annual audit process.

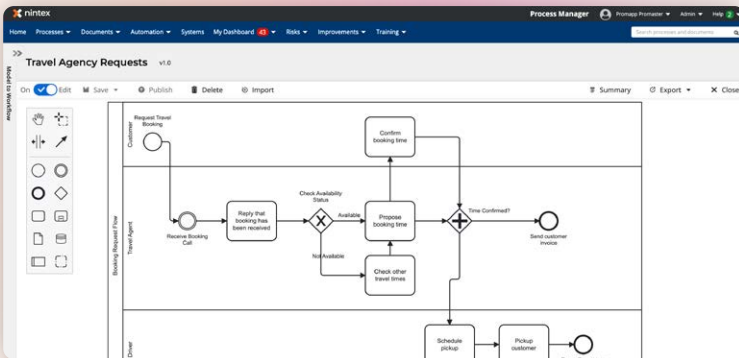

**James Evans**  
Head of Quality, Sonardyne

“

The software automatically maps each process based on a simple textual description of the relevant steps. It allows us to easily share processes in-house and link documents. It also supports collaborative working, as well as continuous process improvement and optimization.

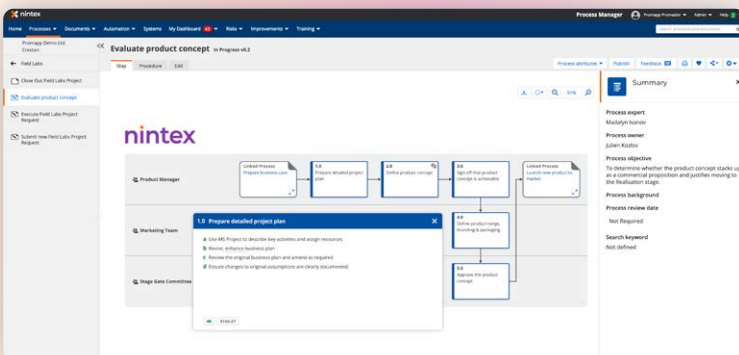

**Mina Boulkarakir**  
QHSE Manager, Apex Energies

## Capabilities

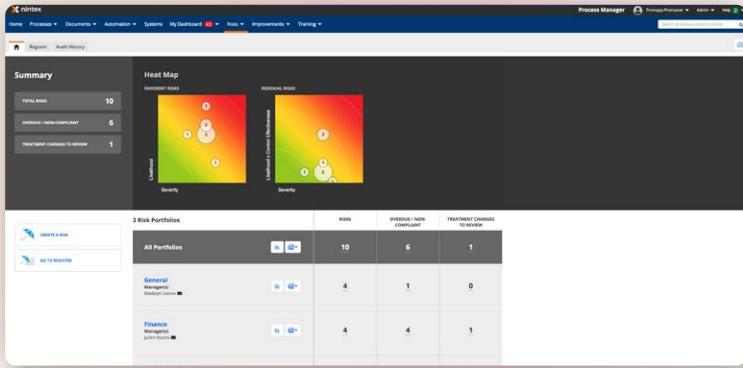

### Process Modeling

Empower technical teams to design complex workflows using BPMN 2.0 standardized symbols. Ensure compliance in even the most regulated industries, while streamlining collaboration across globally dispersed teams. Quickly convert process models to easy-to-understand maps, and maps to models, driving consistency and scale.

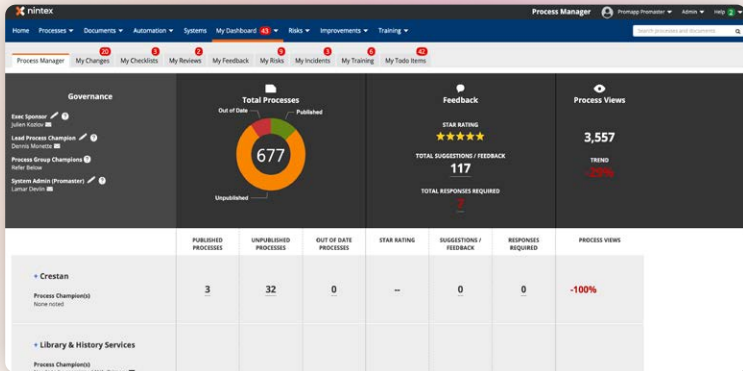

### Process Generation

Simplify process documentation with AI-powered process generation from user activity recordings or simple text prompts in minutes. Eliminate manual mapping and accelerate onboarding, align processes across roles, and ensure consistent, best practice designs. Enjoy an easier, faster alternative to traditional mining tools.

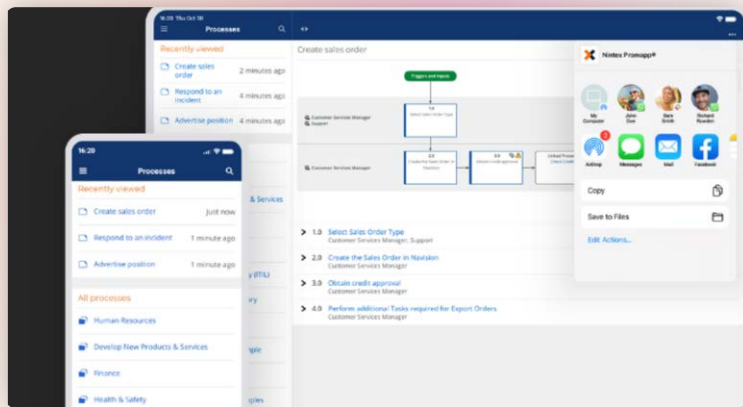

## Risk and Compliance Management

Embed compliance and risk controls, process variant management, improvement, and incident management capability into everyday operations to reduce process deviations and ensure audit readiness. You can even assign role-specific responsibilities for maintaining security and operational integrity — all accessible from the home, office or on the road.

## Process Visibility and Collaboration

Process Manager offers easy-to-access and understand process maps, real-time feedback tools, RACI table updates, and change logs to drive employee engagement and accountability. Personalized dashboards delivering real-time process health, employee engagement, and productivity insights help drive a culture of continuous improvement.

## Mobility and Language Support

Manage processes anywhere, at any time, with Process Manager Mobile. Capture feedback, find processes, and initiate improvements from a mobile device, whether you're in the field or conducting remote work. Cross-language support makes Process Manager adaptable, allowing your team to manage complex workflows across languages and regions effectively.
