SAP Crystal Reports and SAP Crystal Server

Comparison of Features by Version For SAP® Crystal Reports® and SAP Crystal Server Software

DELIVER THE POWER OF INFORMATION WITH SAP CRYSTAL REPORTS

SAP Crystal Reports 2016 continues the tradition of reporting excellence and innovation. SAP Crystal Reports provides end users with reports that include stunning visualizations, business modeling and instant decision making insights while reducing the dependency on IT and developers. Whether you are a business user, an IT professional, a report designer, or an application developer, SAP Crystal Reports delivers richly formatted, actionable data for informed decision making through any application, and any device.

The comparison matrix in Table 1 provides a checklist of features in current and previous versions of SAP Crystal Reports.

TAP INTO YOUR DATA SOURCES

SAP Crystal Reports connects to almost any data source – including relational, online analytical processing (OLAP), XML data, as well as relational databases, OLAP cubes, spreadsheets, log files, and applications. You can always use SAP Crystal Reports to access them.

SAP Crystal Reports also supports Unicode, which facilitates report creation with data stored in virtually any language. For developers, access to user-defined or application in-memory data is available through Plain Old Java Objects (POJOs) and ADO.NET.

GET AFFORDABLE, ENTRY-LEVEL BUSINESS INTELLIGENCE WITH SAP CRYSTAL SERVER

Get easy, self-serve information access to reports, dashboards, and search and exploration documents – without causing IT bottlenecks. An affordable, entry-level business intelligence (BI) solution, SAP Crystal Server delivers secure, personalized information sharing through a single semantic layer and server. Its fast, modular deployment options fit mixed IT, business, and development environments.

Managed access to BI documents can be combined with business processes through office documents or portals, such as Microsoft Office and Microsoft SharePoint, or integrated into applications programmatically through comprehensive software developer kits (SDKs).

SAP Crystal Server includes SAP Crystal Reports for Enterprise software, a Java-based report design tool that accesses data from the SAP BusinessObjects™ BI Semantic Layer Java SDK.
