YES WE H/CK

Global Bug Bounty & VDP Platform

VULNERABILITY DISCLOSURE
DONE RIGHT

Vulnerability Disclosure Policy, a structured, easy and accessible way for anyone to report vulnerabilities.

Cybercrime is an ever-increasing problem due to organisations' rapid digital transformation and the growing sophistication of threats.

Goodwill security researchers can help, but they need a safe & clear framework to inform you. Such reporting can provide you with valuable information to improve the security of your systems.

It is really in your best interest to encourage responsible and organised disclosure of vulnerabilities.

Every business needs a VDP

/ Reduce risk by shortening time-to-remediation.

/ Streamline vulnerability management in your organisation, and enable data integration within your internal workflows.

/ Demonstrate your commitment to security and build trust among your partners, customers and users.
The differences between VDP and Bug Bounty

VDP = Passive approach

Why: Gather potential vulnerabilities.

How: Set up a communication channel on a dedicated webpage – Your Policy does not appear on our platform.

Who: Anyone acting in good faith who wishes to report a bug.

Reward: No expectation of financial reward – Only a "thank you" / Hall of Fame is given.

Bug Bounty = Active approach

Why: Encourage vulnerability research.

How: Set up a detailed program (public or private) displayed on YesWeHack platform (scopes, rules & reward grid).

Who: Selected security researcher or the whole YesWeHack community.

Reward: Pre-established and communicated financial reward grid.

Why set up a VDP with YesWeHack?

We help you compose the Policy's text and commitments

We provide you with a secure and own-branded vulnerability report form

Your Policy does not appear on our Bug Bounty platform

We ensure the traceability and confidentiality of the reports

We automate report integration within your internal workflows

Your Policy complies with ISO 29147 and 30111 standards
