

Online Fraud Detection

By: Helen Barkouskaya

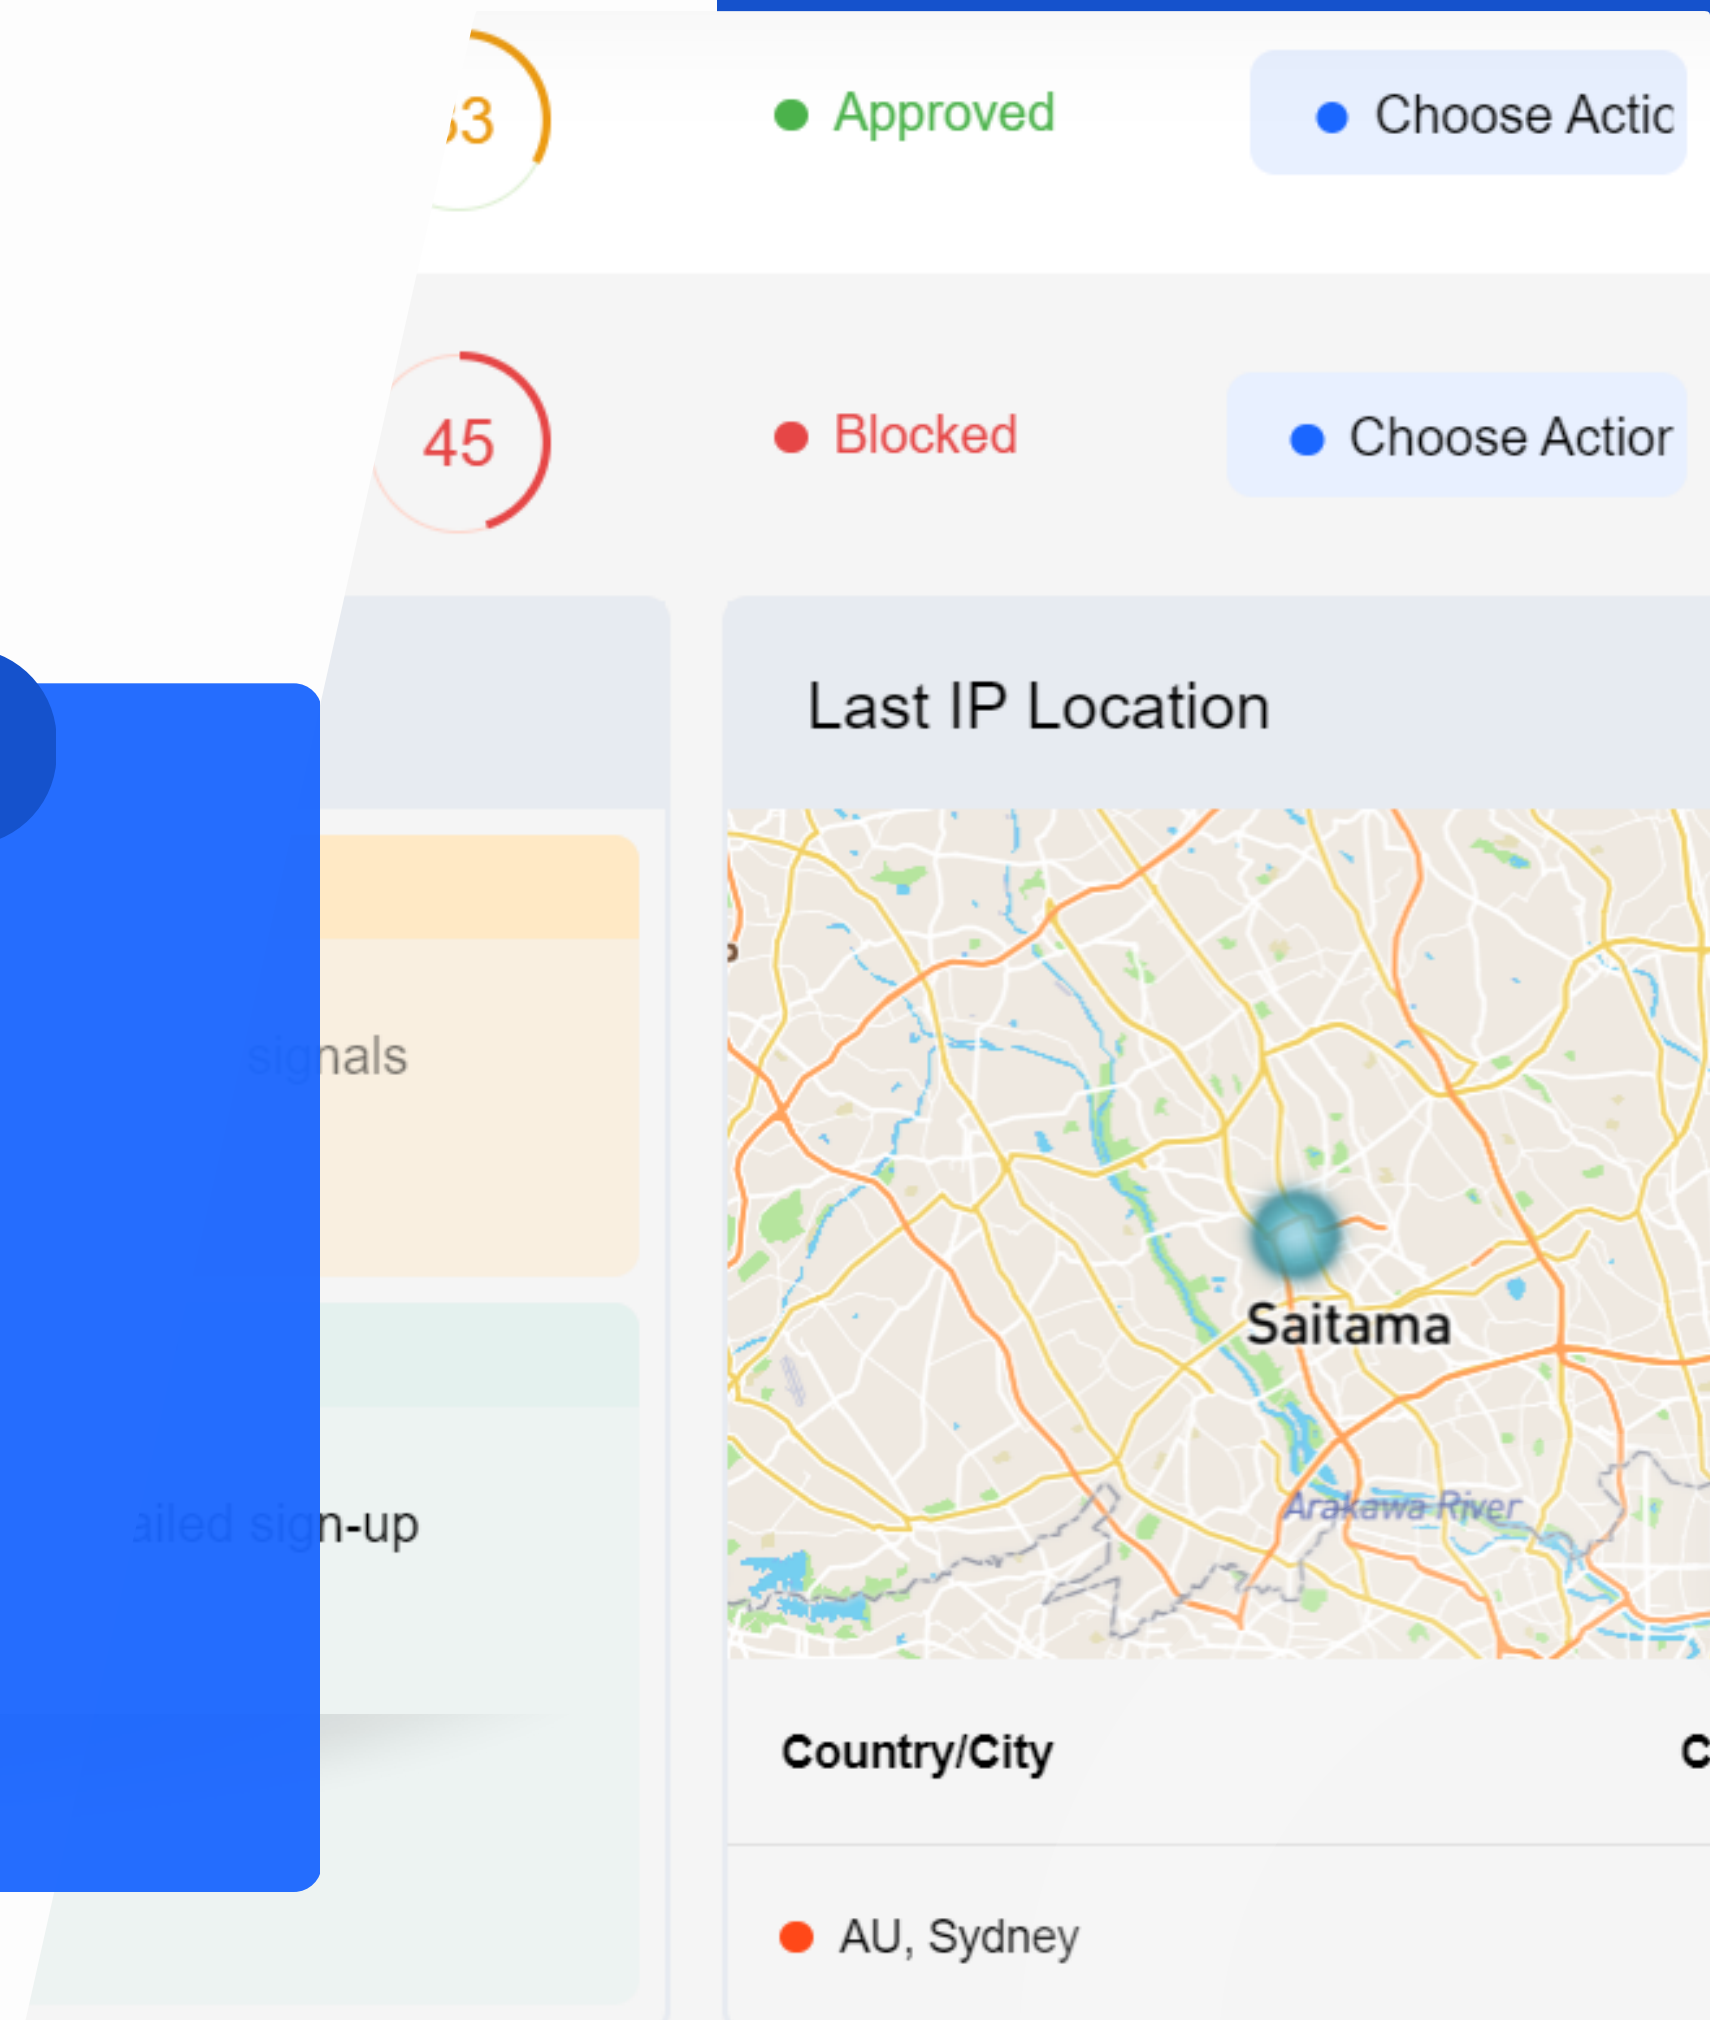

Problems we resolve

Account takeover

- Remote Access Attacks
- Credential Stuffing
- Phishing Attacks
- SIM Swapping and Stolen Devices
- Malware (Stolen session tokens)

Fake accounts

- New Account Fraud (Fake Accounts)
- Bot Detection

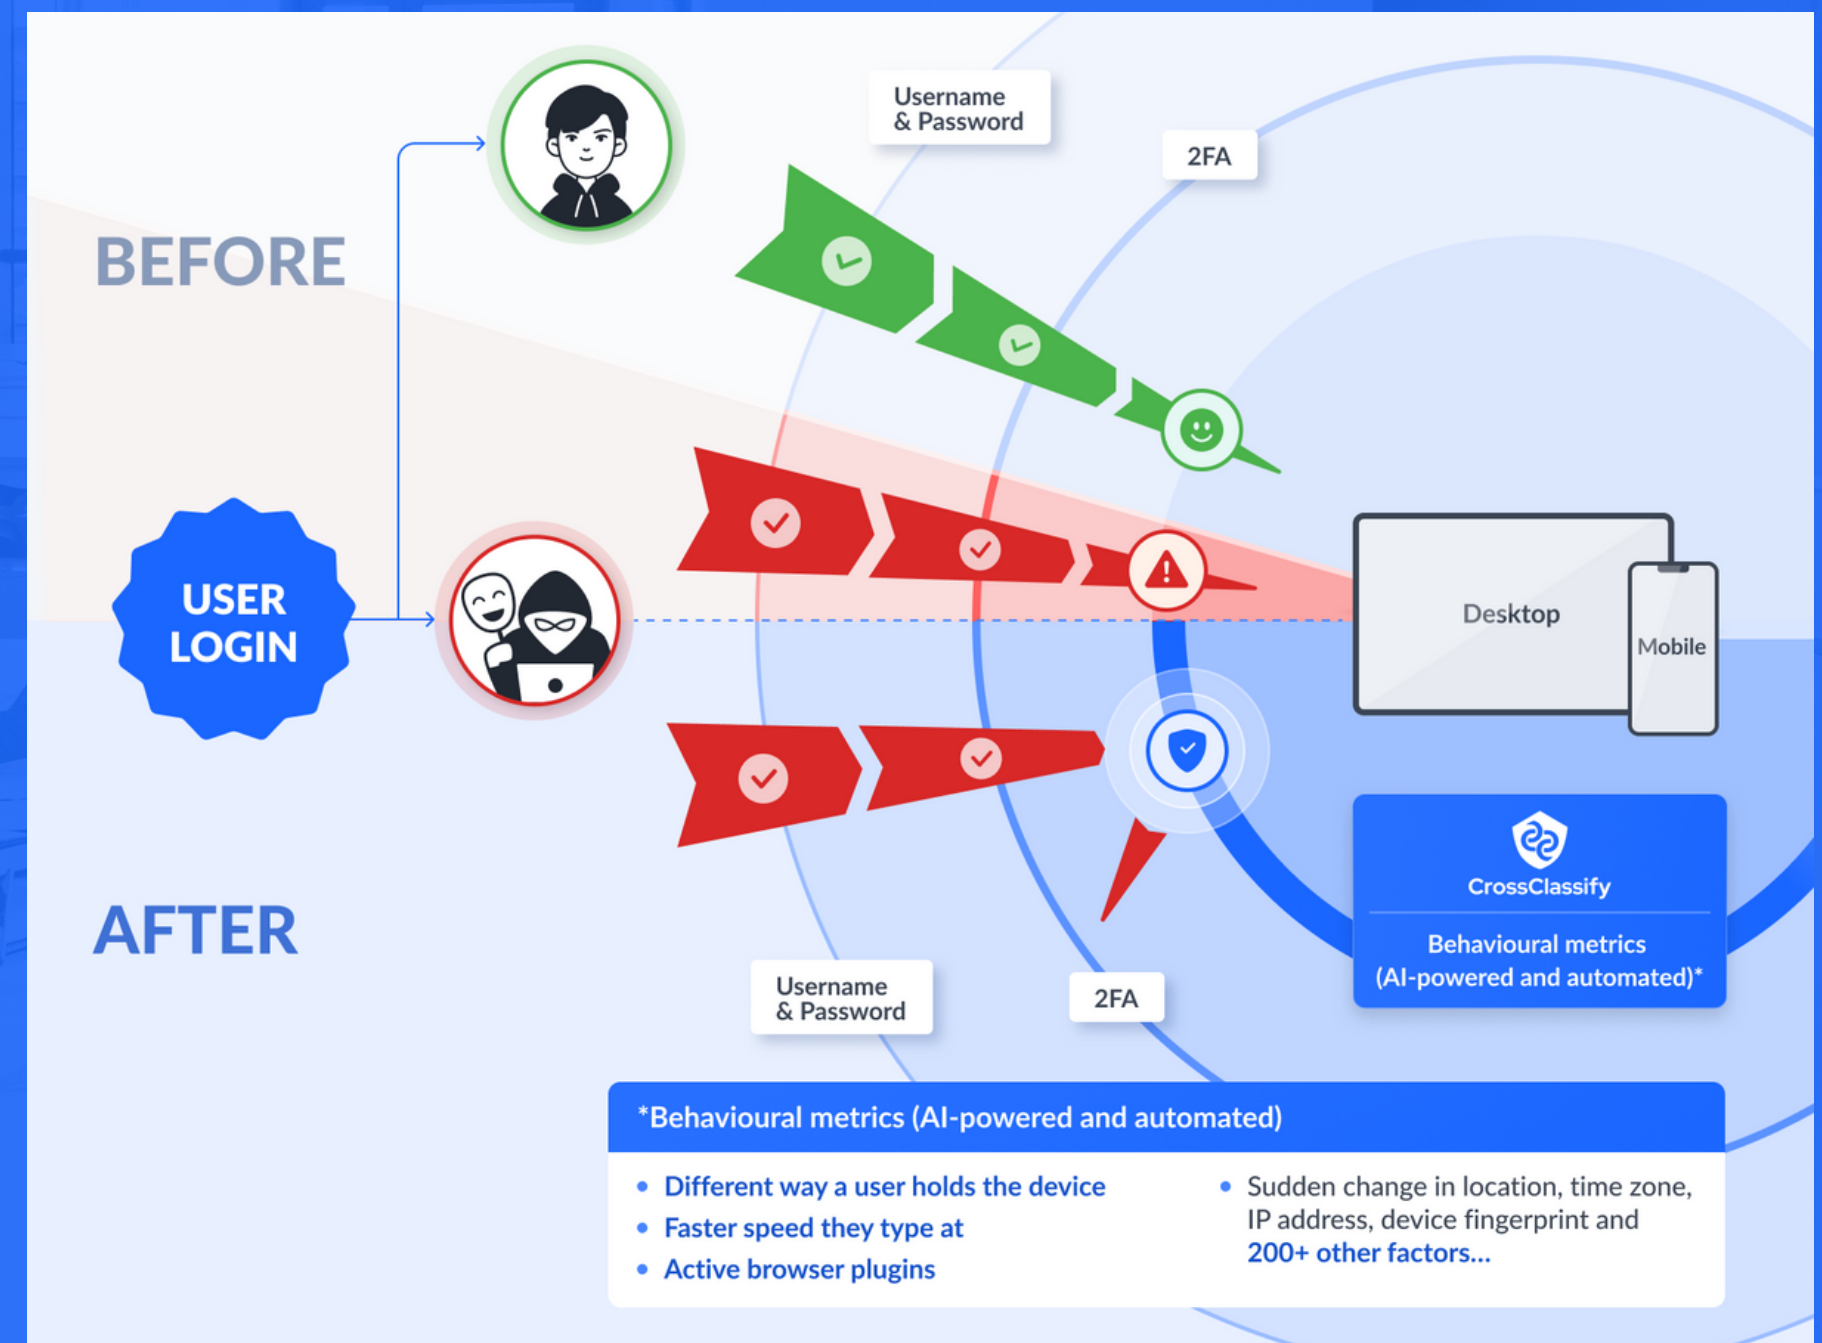

Forget about online fraud with an additional layer of account protection

It takes only 15 seconds to catch the idea of CrossClassify

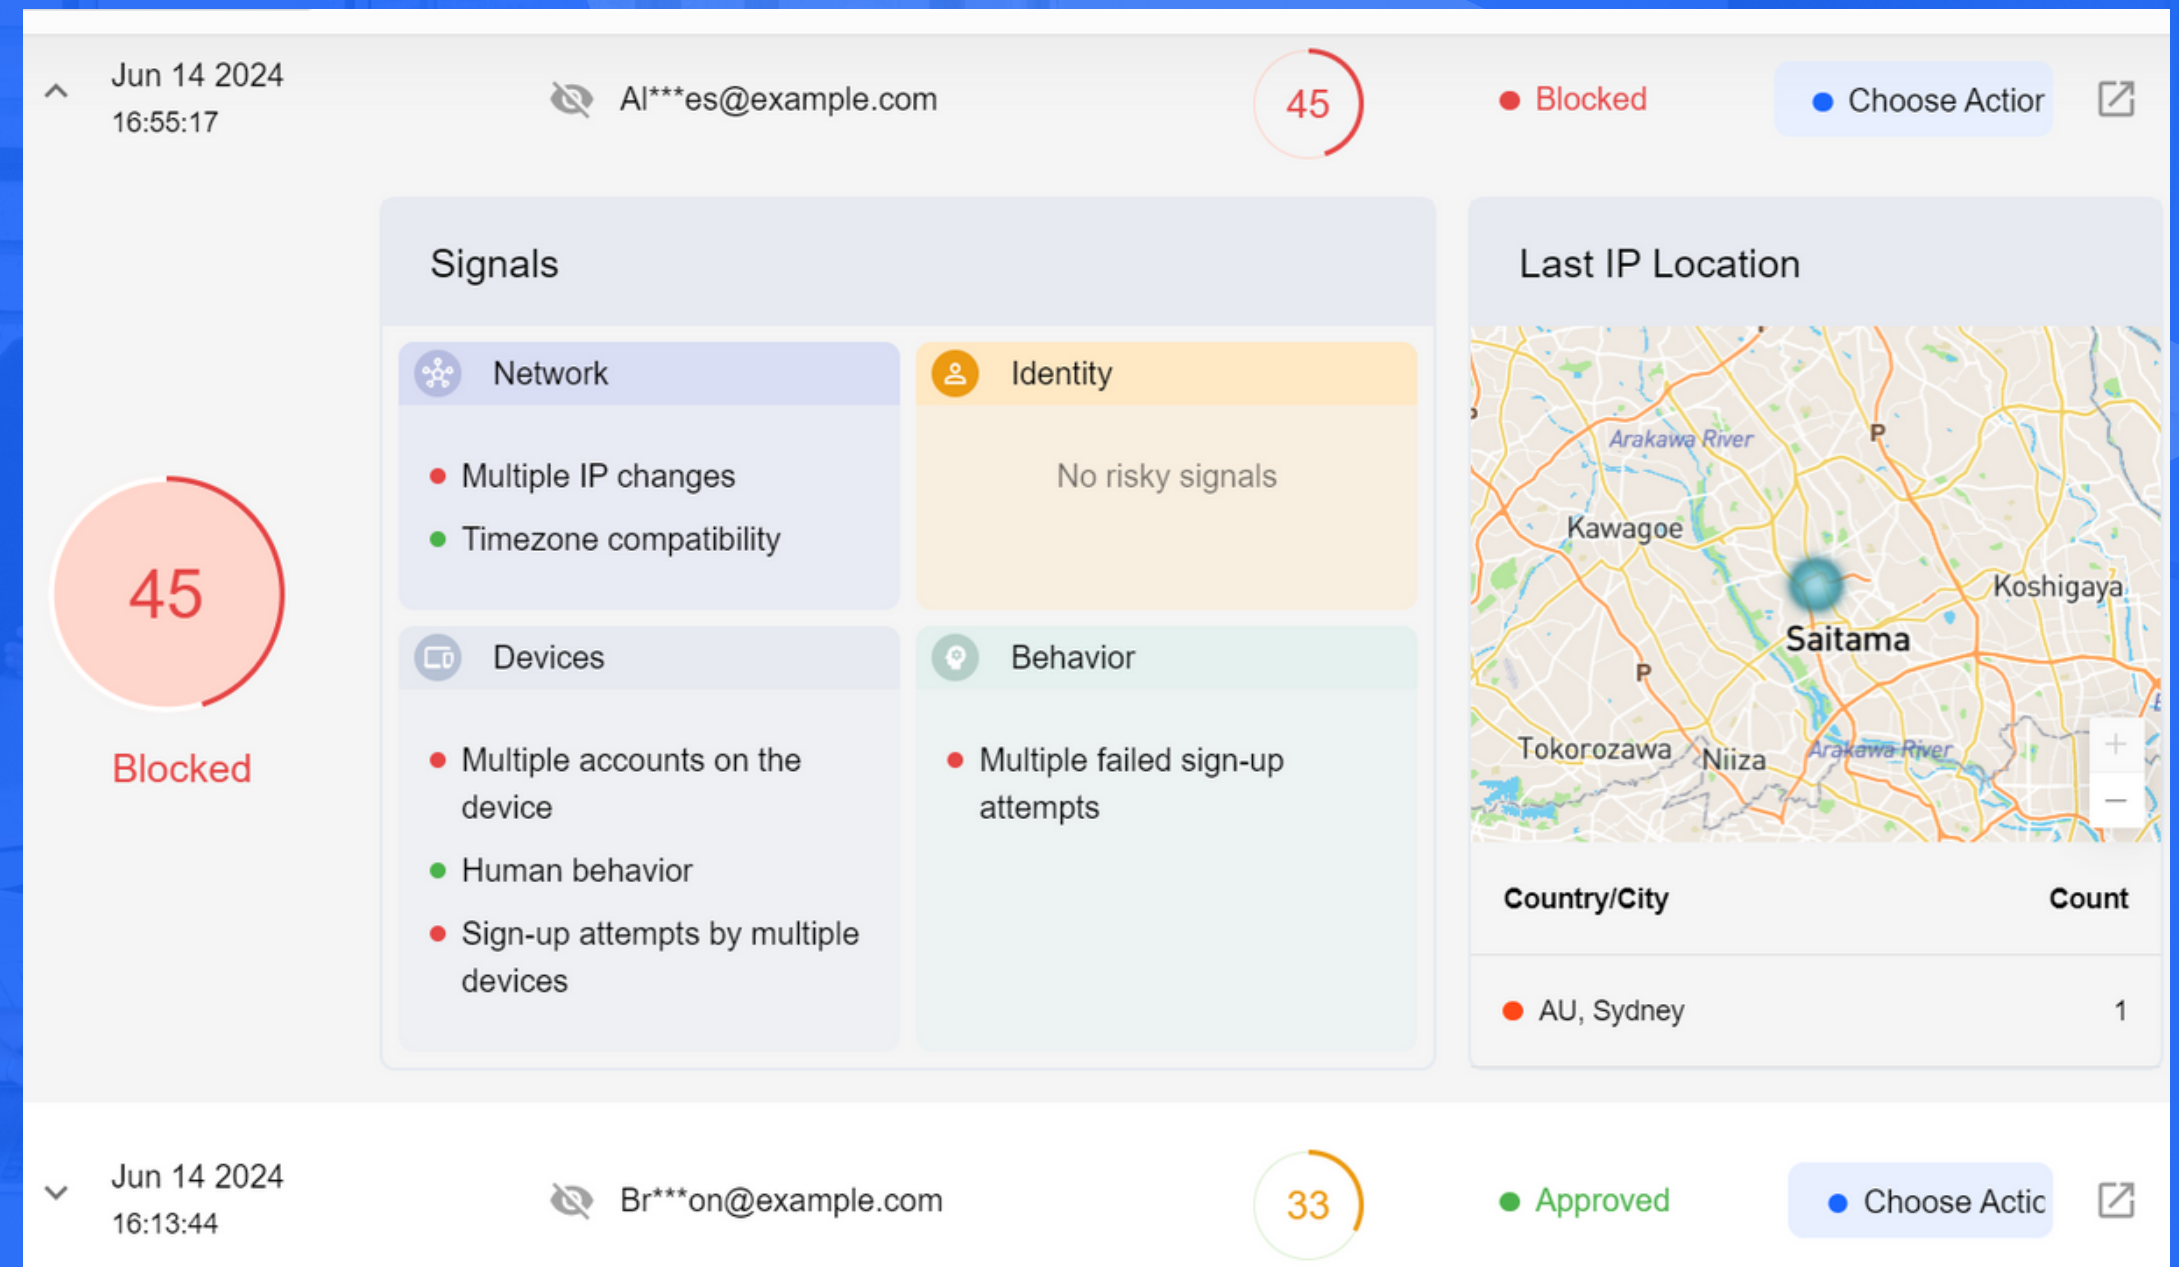

Watch video

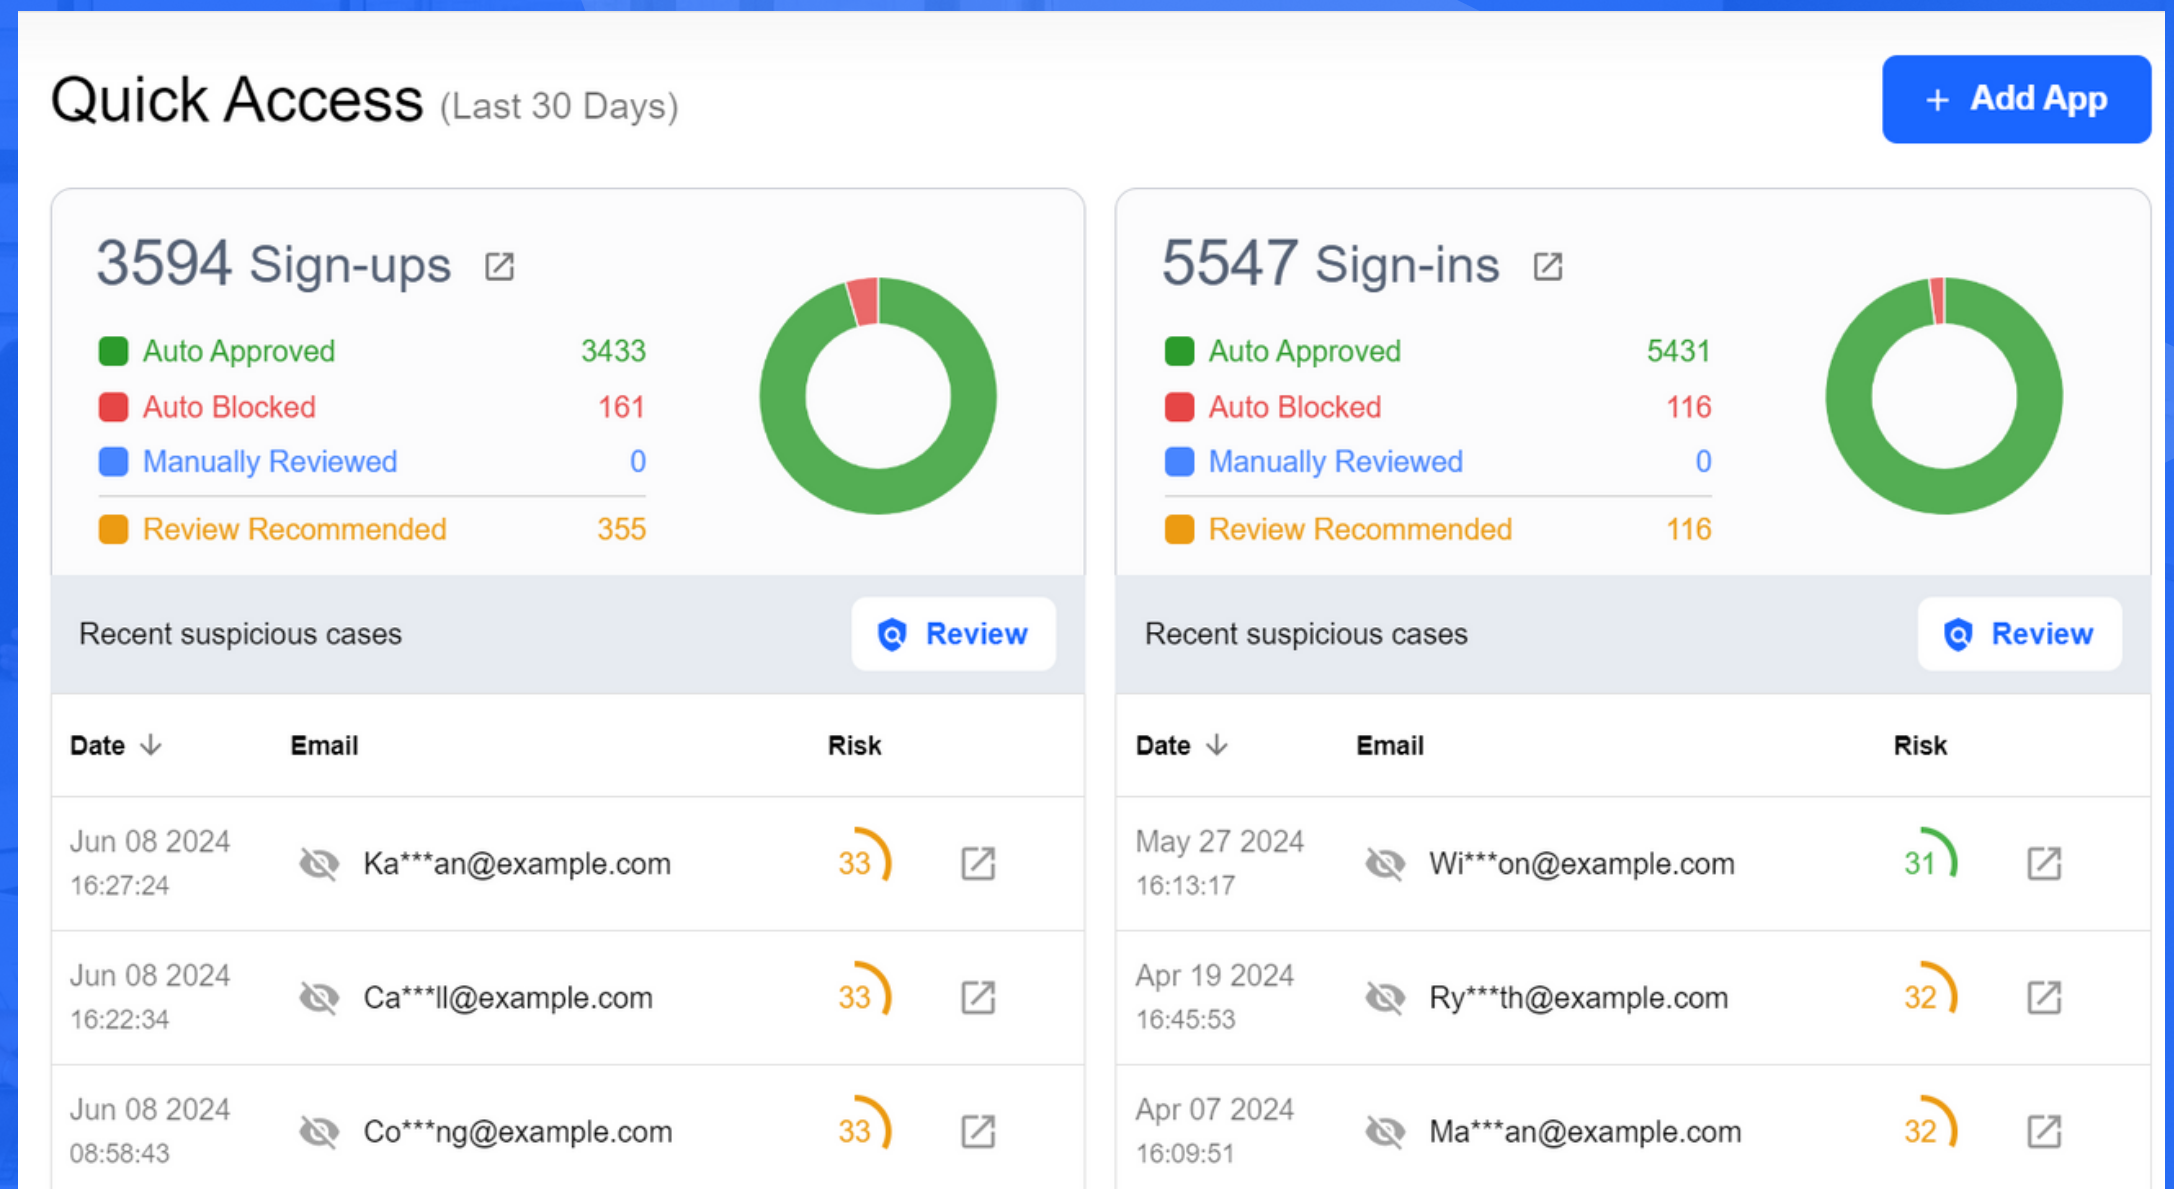

Unmatched account security for your app with rapid integration in just one day

- **Easily integrate** with your app through robust APIs.
- Receive instant **notifications** about **suspicious activities**.
- Take immediate action to protect accounts and data. Easily find out **why an account is blocked**. Investigate suspicious devices.

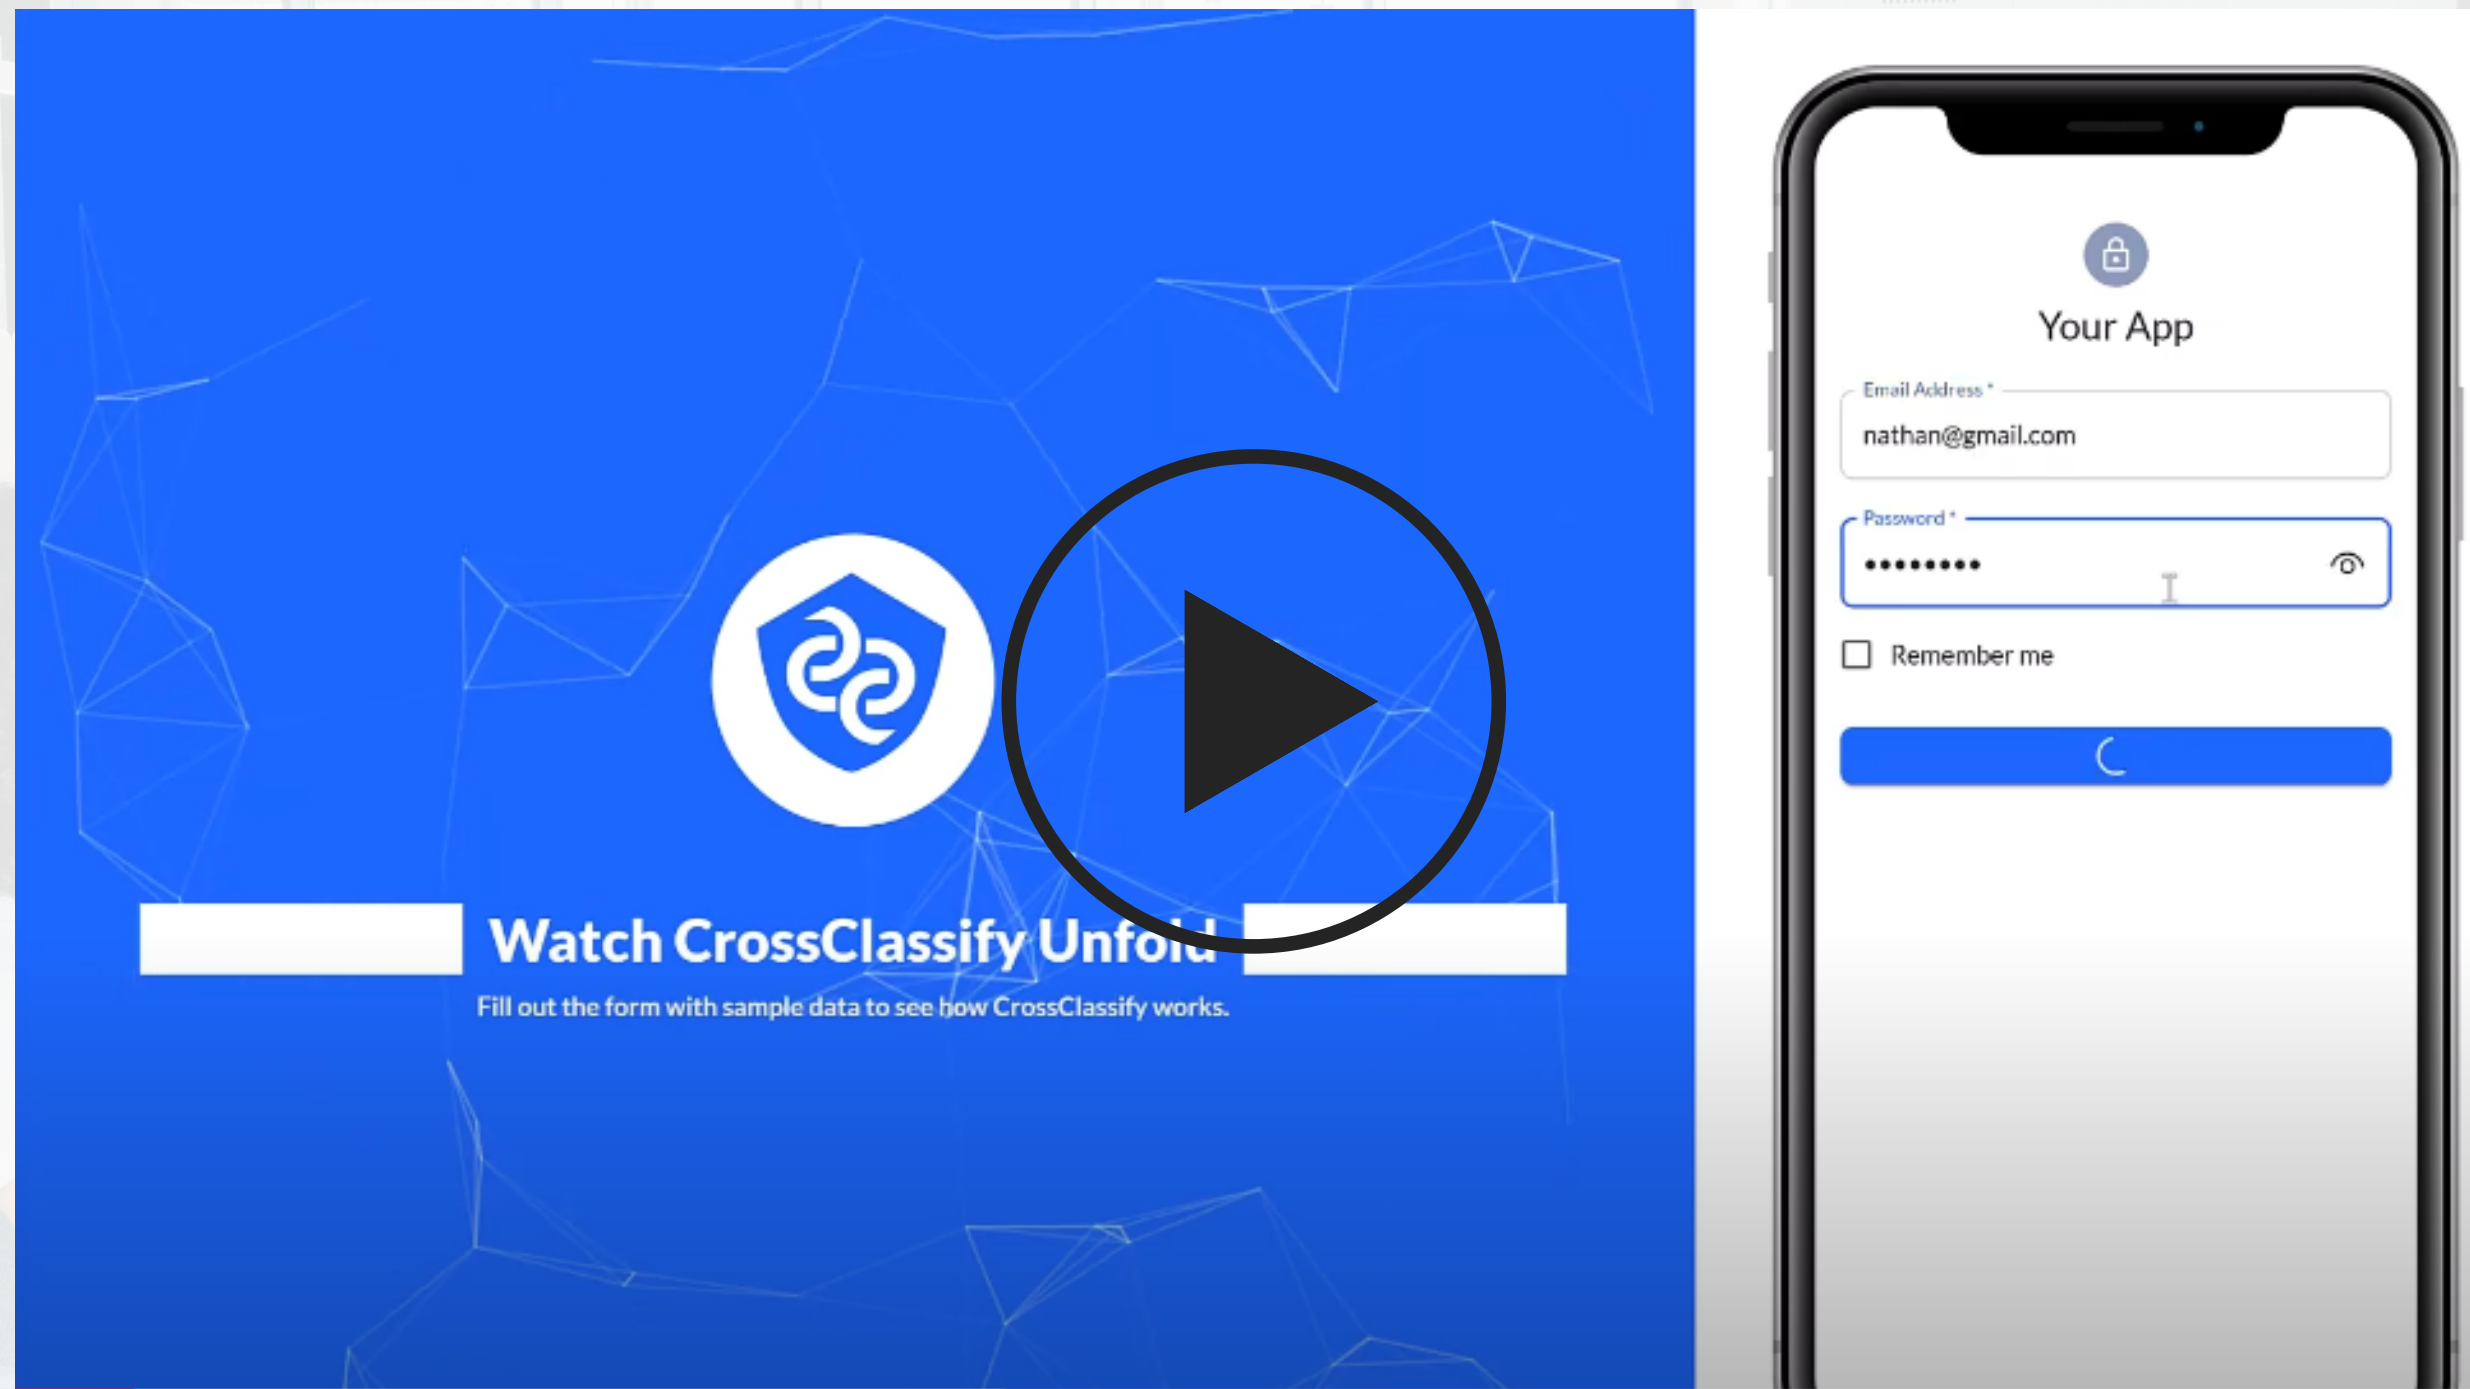

Identify and block malicious user activity before it makes any damage

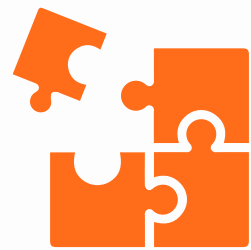

- Minimize false positives and negatives, achieve better security and user trust.
- Provide continuous user monitoring throughout a session.
- Reduce the risk of fraud without disrupting the user experience.

See how it works in a short demo

How we stand out

Easy to implement

Unmatched account security
for your app
with rapid integration in just
one day

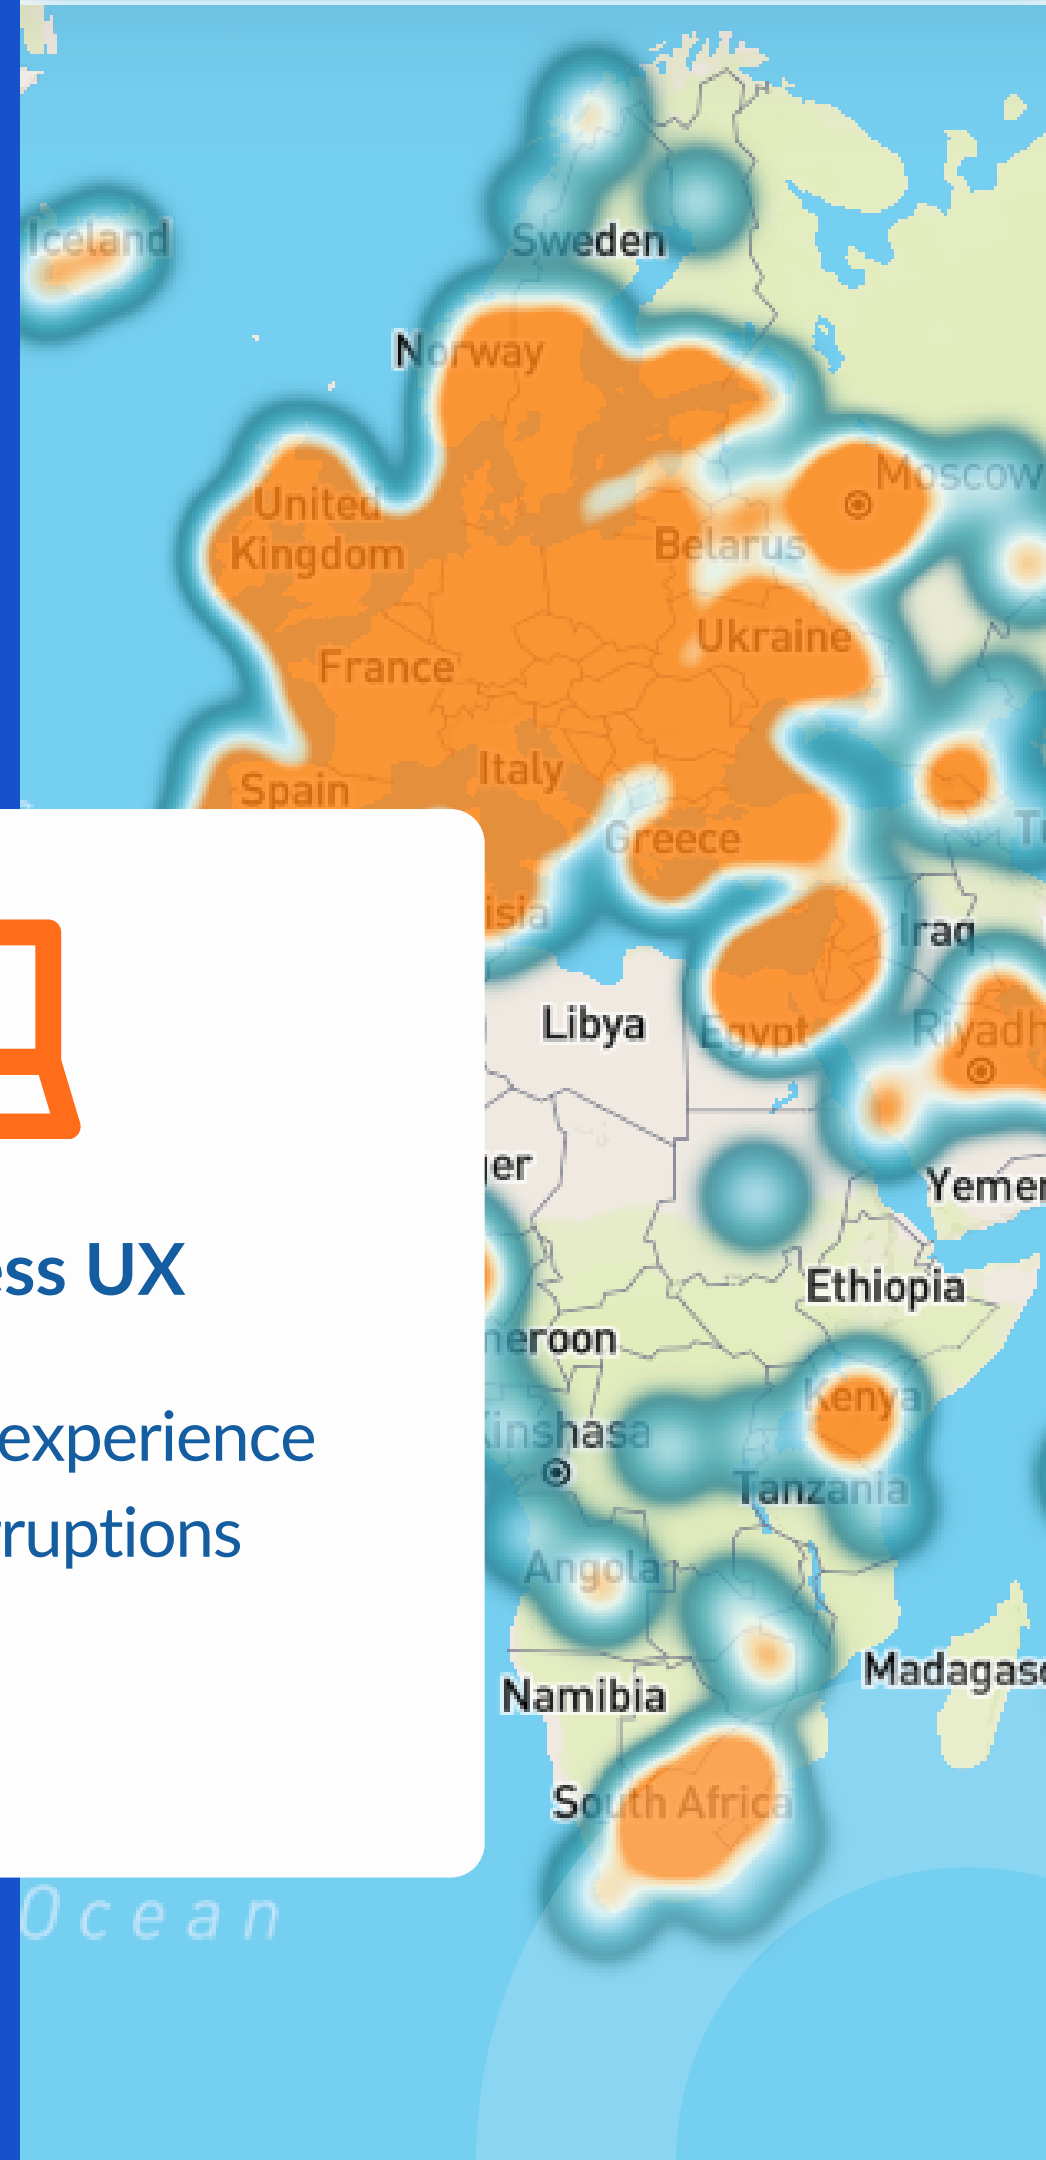

Cost-effective

At least twice less expensive
than the competitors

Frictionless UX

Seamless user experience
with no interruptions
