TRANSFORM

Being able to know and trust your data is essential for meaningful digital transformation and business process automation.

(We help companies understand and develop a practical working relationship with their unstructured data. When unstructured data is no longer a mystery, it becomes useful for achieving efficiency and innovation to drive revenue growth and competitive advantage.)

DEEP EXPERTISE

Receive the benefit of the only software manufacturer in this business who has implemented the competition's products.

(With 30+ years evolving the industry and setting the standard for intelligent document processing, we've solved real-world problems on hundreds of Kofax and Captiva implementations and integrated with Documentum, IBM, OptenText, SharePoint, and most other ECM/database systems.

A NEW APPROACH

Create workflows based on the way you work with documents. By embedding human understanding into documents, you get to build a system that works with data the way a human would.

(Grooper delivers data enrichment that embeds human comprehension into documents and other unstructured data. We're dedicated to innovation in the industry.)

INNOVATE

Deliver new products to market faster by unlocking new sources of insight. Transform operations and empower workers with data.

(Grooper was built to succeed where others have failed. The platform has become the foundation for many industry-first solutions in healthcare, financial services, oil and gas, and government.)

DELIVER

Combine deep industry expertise with artificial intelligence to deliver on the promise of intelligent technology.

(Grooper combines patented and sophisticated image processing, capture technology, machine learning, natural language processing, and optical character recognition to enrich and embed human comprehension into data.)

VALUE-FAST

Stay laser focused on rapidly discovering and delivering meaningful value from existing and new use-cases.

(We helped a Documentum customer fix a repository with six million images missing attributes because they didn't have experts to enter the data at the start of the project. We tackle the tough challenges that other systems cannot resolve.)

DATA YOUR WAY

Work with data on your terms. Stream value by capturing and integrating knowledge from data within data.

(Grooper's hierarchical data modeling extracts and integrates meaningful information from paper/electronic documents and other forms of unstructured data.)

SCALE

Meet the demands of any size project. Power through billions of pages and perform tens of billions of extractions daily. A modern business deserves a modern software architecture.

(Grooper's architecture is the key to us being able to process tens of billions of extractions per day at our largest healthcare account. We wrote our own scanning, image processing, NLP and ML integrations.)

2 WAYS TO IMPLEMENT GROOPER

Grooper was built to succeed where others have failed, taking on tough challenges. The platform processes and integrates massive amounts of difficult data from complex documents and architecture. If we say our system can solve a problem, it can. And we'll show you how.

We provide data fulfillment as a "done-for-you" service or collaborate on a "done-with-you" approach to teach you the technology. Either way, your data is always yours, always secure, and now more useful than ever.

THE GROOPER EXPERIENCE WILL CHANGE YOU LET'S GET STARTED!
