Fixed Asset Management Software

A complete solution to consolidate and centralize a single repository, enabling powerful management, reporting and decision making on your infrastructure.

xassets

xAssets Fixed Asset Management Software is a complete solution to consolidate and centralize a single holistic repository, enabling powerful management, reporting and decision making on the corporate Fixed Asset infrastructure.

The full asset lifecycle is covered from procurement, through receiving, deployment, barcoding, operational service, compliance, historical reporting, to obsolescence and disposal.

Our well established software is browser-based and designed to meet the complex or unusual requirements and scalability needs of large, corporate organisations; while our user-friendly out-of-the-box product meets the needs of small to medium size businesses.

Key Benefits

- ▶ Centralised fixed asset register
- ▶ Barcoding and full asset history tracking
- ▶ Full asset life cycle management from procurement to obsolescence and disposal
- ▶ Get notified when asset changes occur
- ▶ Powerful financials and depreciation engine
- ▶ Per user/per asset pricing with low TCO and rapid ROI
- ▶ Cloud hosted or installed on your Network
- ▶ Security certified by US Air Force
- ▶ Multi-company, multi-currency with full Unicode support for Asian and other languages
Based on Microsoft .NET and SQL Server technology
- ▶ Access via a web browser – no client software to install
- ▶ Fully customisable to meet the needs of large enterprises and complex implementations
- ▶ No complexity – users only see what they need and minimal training requirements

Asset Management Made Easy

Our cohesive solutions are easy to use and quick to configure. This enables xAssets to deliver out-of-the-box software to medium size enterprises with plug & play simplicity, and effortlessly upscale your solution to meet the more complex requirements of larger organisations.

Different departments within your business may have different functionality requirements from an asset management product, and xAssets is able to accommodate the needs of all business areas, with zero impact.

Simplicity is key to our software's structure, incorporating superior configurable dashboards for Asset Portfolio, Financials and Depreciation, History, Asset Life Cycle, Procurement and Service Management. Each user can decide which dashboard is their home page, being completely configurable to their own departmental accountabilities.

User Friendly

Our solution is so straightforward and accessible because it is underpinned by a solid product structure; a framework that has been developed over 8 years. Fine-tuned to the very latest technology, features normally absent from browser-based applications such as customised clipboard, drag and drop, bulk update, table-based editing, asset class specific forms and

customised tree structured hierarchies are not only readily available, but fast and simple to navigate.

With our extensive customized work-flows, application and mail integration capabilities, the asset management processes are smoothly managed into your business-as-usual operations.

Using xAssets to manage your lifecycle will optimise your processes, ensuring your assets are in the most effective stage.

Business Flexibility and Functionality

Our well-established software is browser-based and designed to meet the complex or unusual requirements and scalability needs of organizations of all sizes.

Through easy and flexible configuration, xAssets Fixed Asset Management supports, adapts and evolves with your corporate business processes. Eliminate your manual data entry and cut your maintenance times to allow effective asset management, without requiring significant manpower overhead. The processes include:

- ▶ Procurement with approval chains
- ▶ Receiving and deployment
- ▶ Barcoding and asset inventory
- ▶ Month end depreciation and Total Cost of Ownership (TCO) reporting
- ▶ Change Management and Service Management options
- ▶ Asset register with search, query and automated notifications
- ▶ Email alerts
- ▶ Obsolescence and disposal

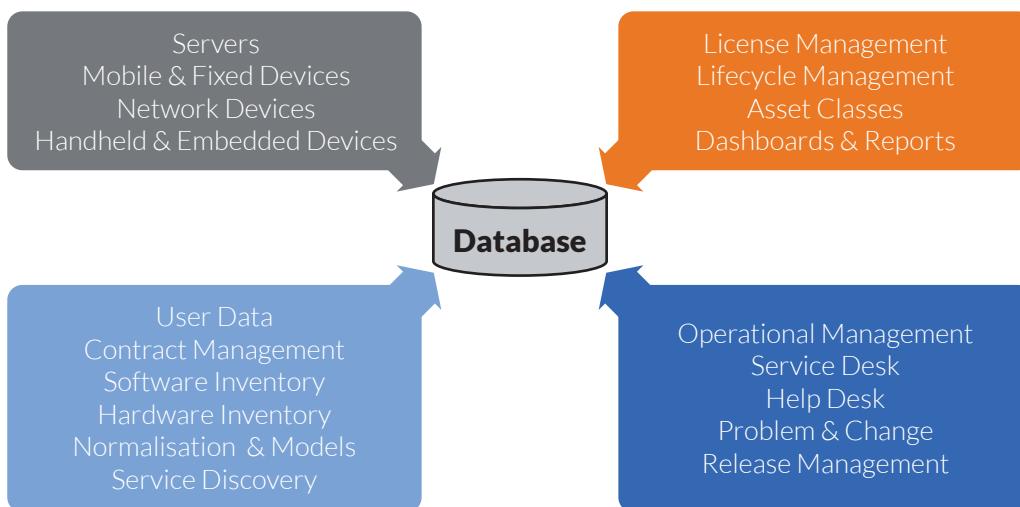

Your business will be up and running with complete visibility of your IT fixed assets in record time, meaning you will be on your first steps to meeting your obligations to regulations, ISO standards and legal compliance.

Depreciation Accounting

xAssets financials engine has the strength and flexibility to support depreciation and accounting periods through a deeply configurable calculation engine that supports every scenario in use today. xAssets solutions can evaluate industry standard and complex formulae, including IFRS and US GAAP ensuring its financial integrity.

A complete library of depreciation report options is included in our software, so your month-end process is just a few clicks away in a convenient and helpful wizard. Calculate depreciation, check the reports, produce and check the journals, and close the period with our fool-proof solution.

- ▶ Comprehensive depreciation calculation engine
- ▶ Model depreciation and amortization formulae
- ▶ Track total cost of ownership (TCO) of assets
- ▶ Multi-company, multi-currency, unlimited books
- ▶ Each user can move forward and back in time
- ▶ Supports unusual accounting periods and year-end changes
- ▶ Define posting rules to specify exactly how transactions are posted
- ▶ Create journals for purchase, depreciation, disposals and transfers
- ▶ Lease accounting and amortization

Change Management & History

xAssets Fixed Asset Management doesn't just store the current state of an organisation's assets; it also stores historic differences at every point in the past. Reports can depict these changes, either from a baseline date or, in comparison to a standard build.

- ▶ Maintain standard build template assets
- ▶ Report on differences from baseline date to profile date
- ▶ Report on differences between standard build and profile date

Charts and tables offer a hugely powerful management reporting feature, through our functional dashboard of progressive drill-down menus and can be exported for output. Each chart and table has a predefined format for easy reading and interpretation.

Notifications can be sent by email and/or via Inbox entries into our system's inbuilt helpdesk:

- ▶ Receive notifications when asset specifications change
- ▶ Receive notifications when monitors and sensors hit predefined limits
- ▶ Receive notifications of planned maintenance work orders
- ▶ Workflows can raise customised notifications at each step

Customise and Extend

All menus, discovery schedules and methods, views, integrations, classifications, queries, forms, reports and dashboards can be configured to your exact requirements. Customers can introduce new recognition scenarios and code them into the discovery data loader.

Create new business functions and shape them to requirements without programming. For example, cross charging for IT server usage, or scheduled maintenance plans for servers, can be easily built-in using the highly configurable engine at the core of xAssets solutions.

Existing installations can be extended with add-on xAssets products, without the need for costly migration or integration, since each xAssets feature uses the same central database and software.

Cloud Hosted or On-site

Customers can choose whether to install on your own in-house servers or have xAssets host the software on your behalf, allowing you to use the software as a service. Our hosted option enables all server management, server licensing, backups and maintenance tasks to be managed by xAssets, with complete access through your own web browser.

On-site installations are often used where corporate policy requires all data is held within the organization's firewall, or where spare server capacity already exists.

Technology based on Microsoft .NET

Our solutions happily run on Microsoft Windows Server with Microsoft Internet Information Server (IIS) and Microsoft SQL Server. An immensely configurable foundation allows for the construction of new functionality, with or without programming. Utilisation of this technology brings benefits for those wishing to extend their software:

- ▶ All data is communicated using XML
- ▶ Write your own software or web pages using the xAssets API
- ▶ Access the API via secure web services
- ▶ Consume other web services, e.g. load Exchange Rates from banking sites
- ▶ Create relationships between assets

Integration

xAssets Data Transformation Services is a powerful feature that can integrate with all of your disparate data sources, enabling structured feeds into a centralised asset data repository.

This flexibility empowers the solution to fit organisations' exact requirements and provide a truly holistic view of the Asset Infrastructure. xAssets interfaces in real time, to provide federated queries from a single source, cutting database volume and eliminating latency.

Our highly configurable integration engine is used to maintain synchronised data feeds from other discovery tools such as SCCM and Active Directory. xAssets can also seamlessly integrate with other database systems including accounting, procurement and HR systems, IT systems including printer and patch systems, service desk and Web/API services.

About xAssets

xAssets is a privately-owned global company with US offices located in Wilmington, DE who provide sales, administrative and technical support along with ongoing product development efforts. They are focused on developing flexible, affordable and easy to deploy IT asset management and fixed asset solutions. A fast-growing company, xAssets has major corporate and government customers worldwide.

xAssets is also a certified SIIA Certified Audit Software Provider and is a member of the CASP program as well as a provider member of the International Association of IT Asset managers (IAITAM).

xAssets products includes IT Asset Management Software, Fixed Asset Management Software, Financial Asset Management, Software Asset Management, Enterprise Asset Management, Service Management and Network Discovery Software, offering cloud-based (SaaS) or locally installed versions for small to large enterprises. The solutions are used by many well-known organizations around the world in almost every vertical market. Their partners range from MS LARs to global IT Service companies to small niche product providers.

The company provides proactive consultative support to customers throughout the product lifecycle and they always ensure that their customers' requirements are met or exceeded. These products provide full life cycle asset management capabilities, including discovery capabilities that can stand alone, or complement and integrate with SCCM (System Center Configuration Manager), and provides users with a full Configuration Management Database (CMDB).

For more information about xAssets' ITAM and FAM products, its other ground-breaking products or how to become an integration partner go to www.xassets.com or contact Barry Long, Director of Business development, on 800 691 9120.
