At ConstructConnect our goal is to provide commercial construction professionals with the data, insights, and preconstruction solutions to help drive your business forward.

Quick Bid is a construction estimating software that compiles itemized costs, labor production, change orders, overhead/profit, and materials to precisely predict the cost of a job and avoid bidding too low or too high. Use Quick Bid for unit cost estimating or detailed estimating to generate branded, formal proposals, detailed material lists, and labor reports. Connect your takeoff quantities from On-Screen Takeoff® in real time to reduce errors and save time estimating your projects.

Quick Bid helps you quickly and accurately estimate construction projects by letting you:

- Compile material and labor pricing using assemblies containing detailed items to easily calculate job costs.
- Use eQuotes to get up-to-date material pricing from your suppliers to incorporate into your estimate.
- Review and edit overhead and profit for the entire bid or by CSI section for a more precise bid.
- Sync your takeoff quantities from On-Screen Takeoff in real time to build accurate and detailed assemblies. Assemblies can be saved for use on future projects.
- Easily create change orders and alternates without having to start from scratch. These can be built independently and included as part of the entire job cost.
- Create branded, formal proposals, including your company logo, containing information on the total and detailed costs of your bid.
- Export your bid job cost data to expedite the creation of a detailed budget to import into your accounting software.
- Access specialty material assemblies from top manufacturers in the construction industry.
