

Learning Management System (LMS)

Hut Six's Learning Management System (LMS) provides security teams and management a simple, effective and feature-rich tool for quantifying and reporting staff security awareness, allowing for a clear picture of your internal risk landscape.

Tracking employee progress

Hut Six's LMS gives security teams a wide range of reporting metrics that facilitate a total overview of the organisation's security awareness progress, all of which can be downloaded as custom reports for governance or compliance purposes.

Custom groups can be configured to collect and compare information on specific teams, including management, individuals in high risk positions, or those with access to sensitive information.

Hut Six's LMS enables security teams to:

- Track improvement and positive change over time
- Deploy training schedules
- Strategically launch phishing attacks
- Understand employee awareness and vigilance

Customisations

The LMS can also be customised with the addition of your organisation's branding, colour palette, reporting contacts and more to create a familiar 'in-house' experience that fits your culture, providing an engaging experience for you and your team.
