

The Alternative to Citrix and VMware

OVD Enterprise is an affordable alternative to Citrix and VMware. It lets any organization move business-critical Windows and Linux applications to the cloud and deliver them to users on any device.

OVD Enterprise eliminates the complexity and lowers the costs associated with Citrix and VMware. It provides an integrated and straight-forward solution that is fast and easy to implement, simple to manage and offers a great user experience.

Best of all, OVD Enterprise is up to 50% less than the cost of Citrix and VMware.

Why Choose OVD Enterprise?

Integration. OVD Enterprise is an all-inclusive subscription service. It offers an integrated set of features that lets any organization deliver cloud-based virtual workspaces and applications. There are no confusing versions to consider or hidden fees to manage.

Lowers Costs. OVD's modern architecture uses less infrastructure overhead and deploys on Linux, saving valuable third-party licensing fees and reducing your overall cost of ownership.

Simplicity. OVD deploys in hours, not days. As a result, you won't spend excessive amounts of time and resources managing complicated deployments. It also integrates with today's leading data center standards, including hypervisors, network storage, and directory services, so you can leverage your existing investments.

Easy to Use and Manage. Inuvika created an easy solution for end-users to learn without lengthy training. IT Departments will also appreciate OVD's streamlined management. You will no longer have to use multiple management consoles that are confusing or offer several ways to perform the same task. Instead, Inuvika's Web-based management console provides single-pane-of-glass management for every aspect of OVD: Servers, applications, tenants, and users.

A Great User Experience. Inuvika's approach to advanced session and profile management translates into a fast and reliable user experience. As a result, log-in times are short, apps launch quickly, and fewer support calls are needed. Users can also choose how to access their apps, including on shared desktops, within a Webbased portal, or integrated onto the user's local desktop for the most natural user experience.

Compare OVD Enterprise to Citrix and VMware

	Inuvika OVD Enterprise	Citrix Virtual Apps	VMware Horizon Apps
✓	Seamless Windows and Linux Applications Access Windows and Linux apps together at the same time within the same session and user interface.	Requires additional set-up. Linux apps launch separately from the Citrix client and do not operate seamlessly with Windows apps.	Requires additional set-up.
