

WEBCON[®]

WEBCON BPS

RAPIDLY DELIVER BPM APPLICATIONS
THAT USERS LOVE

WEBCON BPS is a platform to rapidly create BPM applications – from departmental to mission critical – without coding.
It's more than just no-code. Cutting-edge **InstantChange™** technology revolutionizes the application delivery process and ongoing change management reducing time-to-business to a minimum.

WEBCON BPS is a Rapid Application Development platform that reduces the time and risk of software implementation projects by 70%.

It is designed for IT departments and Business Process teams of large and medium companies that need to continuously deliver enterprise-grade applications.

Deliver applications using agile, iterative, no-code methods that improve core business process effectiveness by 50% and deliver high ROI.

Digitalize, standardize and automate business processes, and coordinate tasks across departments and borders.

InstantChange[™] technology

Delivering BPM applications is just the beginning.

Most companies admit that ongoing change management is their biggest challenge.

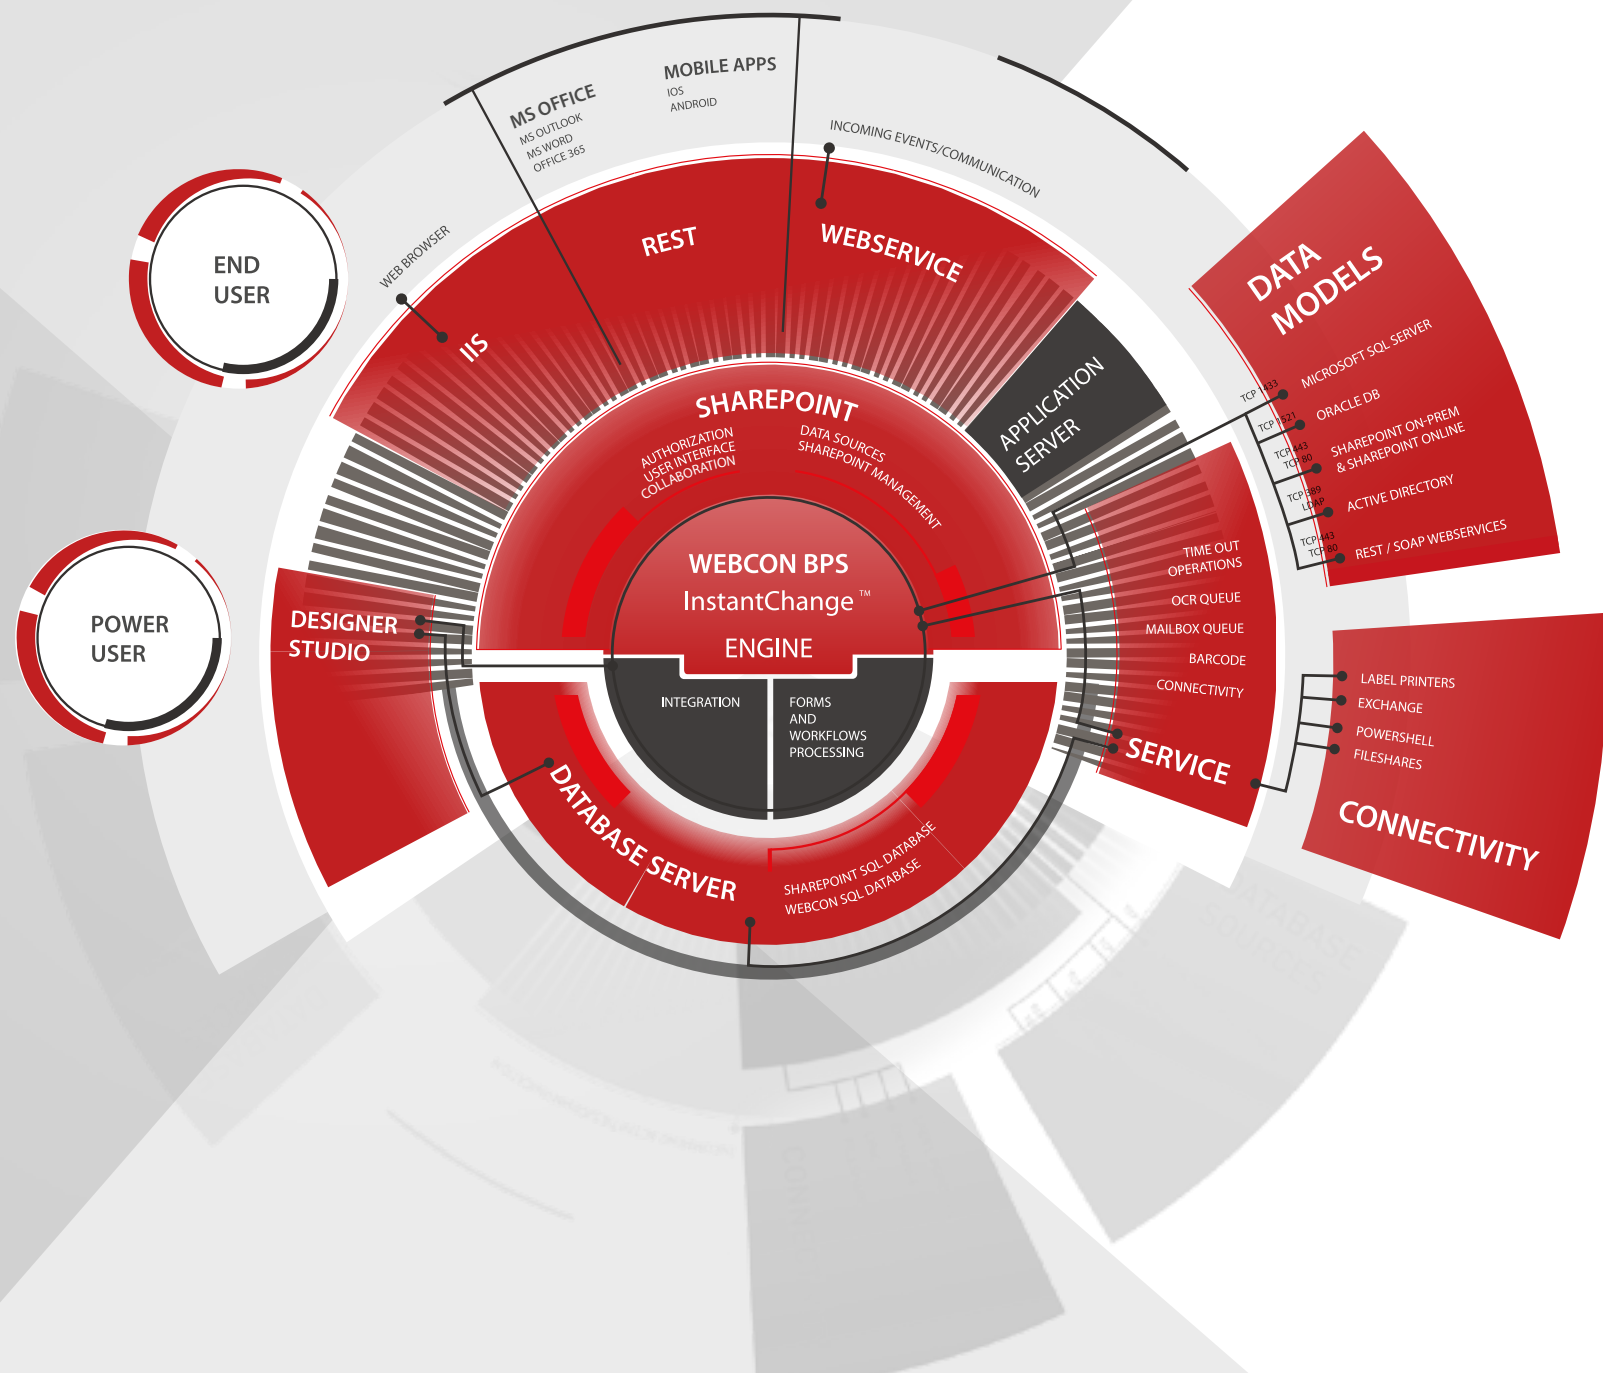

InstantChange[™] technology ensures quickness of initial delivery and effortless adaptation to frequent changes that always follow.

How it works?

Whenever a change is requested, you simply drag & drop the new requirements into your application and hit "save". No deploying, no waiting – your changes are effective instantly.

InstantChange[™] technology is an integral part of:

- Workflow engine
- Business Rules engine
- Forms engine
- Integration engine
- Migration engine

No-code delivery

Don't be a hostage to custom code.

No-code means freedom of continuous development, higher security of investment, and delivering more with less. The powerful out-of-the-box features in WEBCON BPS make coding a thing of the past.

WORKFLOW & FORMS

Drag and drop complete applications using a graphical designer. No-code application delivery means quick time to business and easy change management.

INTEGRATION

Start workflows based on external events. Leverage data from your ERP, CRM, SharePoint or any other third party system using webservices and direct database connectivity.

BUSINESS RULES ENGINE

Control the behavior and logic of your applications with business rules. Modify them on the fly, nest and reuse to manage changes efficiently.

DOCUMENT MANAGEMENT

Use barcodes to streamline batch scanning. Register documents' metadata using OCR and advanced content recognition. Generate and update Word files whenever your processes need them.

Instinctively familiar UI

Achieve maximum efficiency with minimum training.

End-users love intuitive applications that help them in their day-to-day work. WEBCON BPS offers ready to use personal productivity tools so you can effortlessly enhance applications you build to make users' work more effective.

Self-explanatory forms, the look & feel of SharePoint, standardized design and unified user experience ensure great adoption rate.

Spice up your solutions with out-of-the-box add-ins for Outlook and Word, throw in mobile apps, and **here is your winning recipe that exceeds users' expectations.**

Change & maintain

Just like biathletes don't choose between shooting and running, IT departments need to both develop new applications and maintain the existing ones.

No more maintenance nightmares – everything you build in WEBCON BPS today will be ready for tomorrow.

Maintenance efforts are reduced to a minimum thanks to **InstantChange™** technology assisted by self-documentation, neat error reporting and system performance monitoring.

WEBCON BPS offers a low learning curve for power users. This translates to business continuity insurance when faced with employee turnover.

One platform – endless possibilities

A single application development platform vs financing, managing, learning and maintaining multiple systems. From supportive to business critical, from departmental to global – WEBCON BPS enables our clients to deliver over 90% of all applications they need.
