

A centralized library for IT asset management and visualization

Flexible user management

.....

Comprehensive dashboard

.....

Integration-friendly design

- 1 RepoPro™ is an easy-to-use, generic repository application that enables organizations to centrally store and manage their asset information - including related metadata and relationships.
- 2 RepoPro™ has an intuitive user interface designed to help users find information with ease and accuracy.
- 3 Shared communication channel facilitates cross-functional data exchange with asset relationship visualization as an added kicker.
- 4 It integrates with your existing IT setup and seamlessly fits into your business processes.

SaaS

On-premise

Hybrid

Features

Information Modelling

- Define and maintain asset types with meta-data parameters grouped into categories and version-able asset types
- Support for derived attributes and derived computations
- Define relationships between asset types

Information Management

- Create and maintain instances for user-defined asset types
- Clone/create new or existing asset instance to compare two versions
- Snapshot of revision history for changes in overview, meta-data parameters and relationship
- Compare any two revisions of an asset instance version
- Owner of an instance can view it's average rating and feedback
- Manage and visualize bi-directional relationships between instances
- Leader Board - view the top ranked users derived from gamification
- Concurrent editing lock feature prevents multiple users to simultaneously edit an instance
- Converse about the asset instances in the discussion forums and bookmark favourite asset instances

Information Classification

- Define and manage taxonomies
- Classify asset instances using taxonomies and free-text tags for information discovery
- Browse and filter asset instances by asset types, taxonomies and metadata parameter values
- Search the repository by taxonomies, tags, asset types, keywords or other custom client-specific use cases
- Search based on meta-data Parameter values across asset types

Subscriptions

- Subscribe to asset types, asset instances and taxonomies
- Mail notification to users when there is an event of interest triggered for their subscriptions
- Manage all subscriptions from a single interface

Authentication and Authorization

- Comprehensive access control mechanism through Roles, Users, and Groups
- Allow public access with appropriate access control at asset type and instance level
- Allow access control based on groups at asset instance version level
- Support for authentication through corporate LDAP (Lightweight Directory Access Protocol) and AD (Active Directory) lists
- Manage access rights per category of parameters for asset types

Reporting

Supports your existing third-party reporting tools to generate reports for effective decision-making

Extensibility

Support for widgets through user-customized Java server pages. Widgets are available for recent activity, favorites, quick stats, admin message, and leader board. Users have the option to include other widgets according to their needs.

Import/Export

- Export the asset information from the registry in the form of Excel workbook
- Import the asset information into the registry from excel workbook. Import is achieved through below methods:
 - Full Import - load the data from Excel workbook and update Repository
 - Incremental Updates - update existing data using data from workbook
 - Incremental Insert - add to existing data using data from Excel workbook

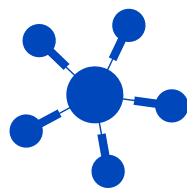

Miscellaneous

- Admin user is allowed to set the banner message in all screens that runs as a marquee. The data is visible to all users
- Admin users can set Help contents to all users via Help icon
- Option for the admin user to set mail templates for various events
- Allows Theme based settings according to customer needs
- Logged-in users and guest users can send their queries related to RepoPro™ through contact us option
