WITH BUDGYT

WHAT YOU'RE GETTING WITH EXCEL

- ▶ Inability to securely & confidently collaborate
- ▶ Cells that can be easily overwritten
- ▶ Risk of broken formulas and data errors
- ▶ Never-ending spreadsheets for each department and cost center

WHAT YOU'RE MISSING OUT ON

- ▶ A consolidated space to input, track, and report data for all departments and cost centers
- ▶ Contributor access to their budgets to easily submit changes and get approvals
- ▶ Confidence in data accuracy with unbreakable formulas
- ▶ A simplified user experience that anyone can master
- ▶ Control over what contributors can and can't see

budget **5x faster** and
reduce labor costs **by 80%**
with our simplified platform

EXCEL VS BUDGYT
COST SAVINGS CALCULATOR

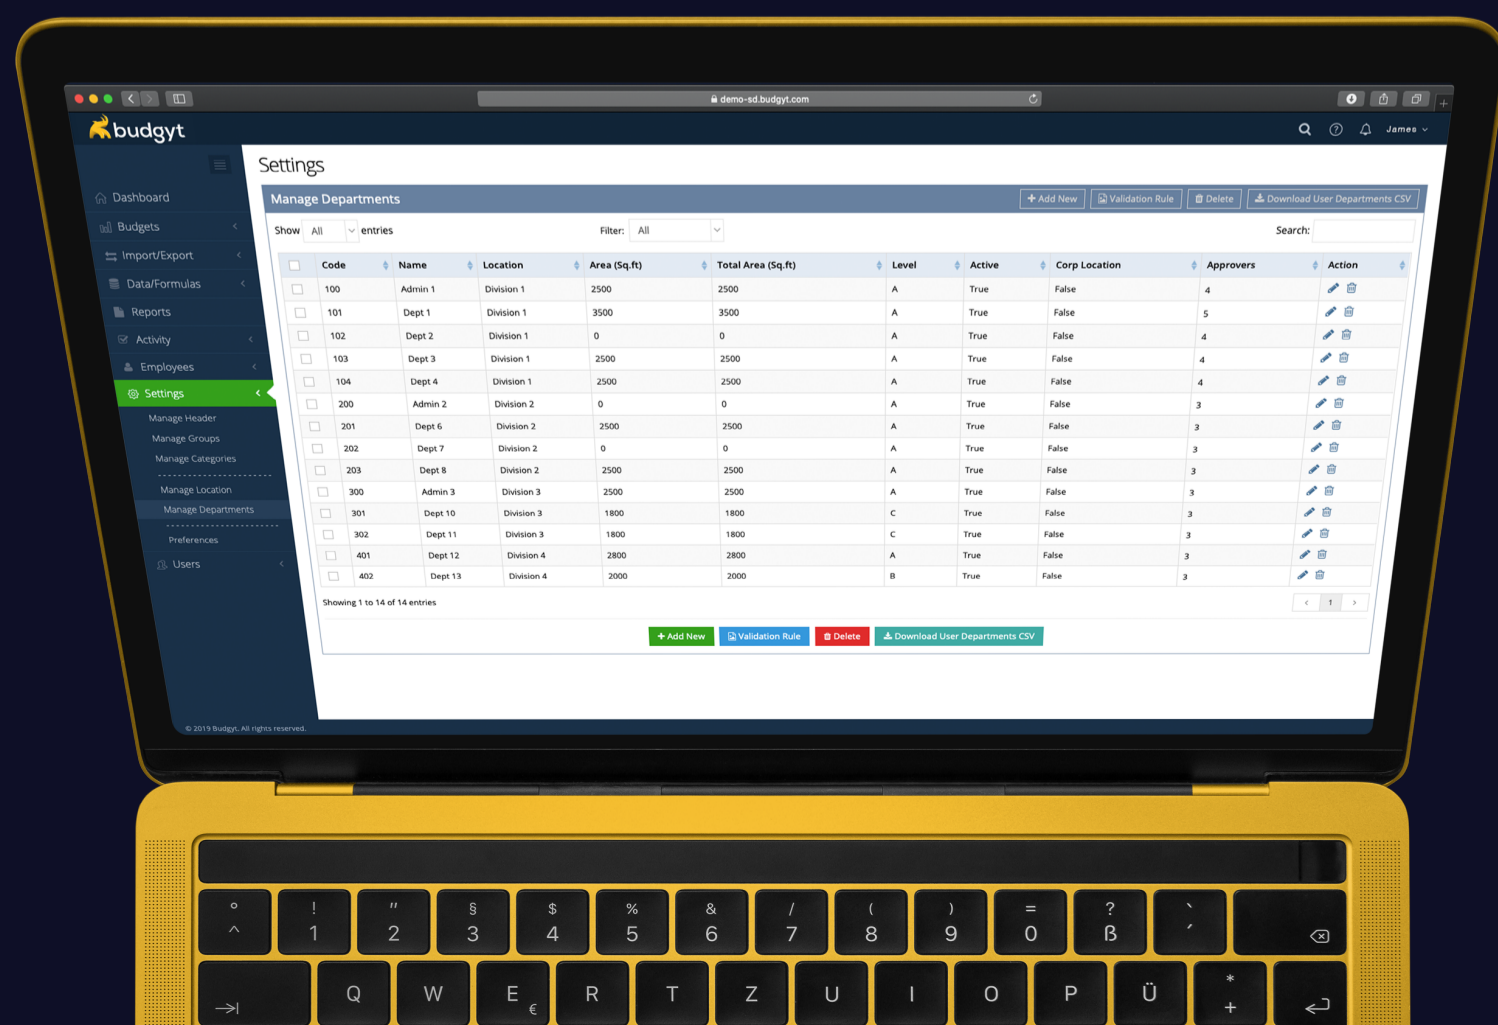

DATA INTEGRITY

Unbreakable formulas built away from the data and track changes for security and transparency

PAYROLL MODULE

Payroll forecasting at the employee level with true payroll tax calculations and benefits allocatable across multiple classes and fiscal years

VERSION CONTROL

Unlimited versions and copy functions build forecasts and what if scenarios in seconds

COLLABORATION

Unlimited contributors on a single, intuitive platform secured by user permissions

LEARN ABOUT MORE FEATURES

excel vs. budgyt: the (in)comparable differences

Excel wasn't built to make budgeting with **multiple cost centers** and **multiple budget contributors** simple. **Budgyt was.**

VERSION CONTROL

- New spreadsheet has to be made to overwrite the data where necessary
- Additional formulas need to be built to extrapolate data on each tab
- Formulas and links need to be checked and compared to see how new forecast relates to the original budget.

DATA ENTRY

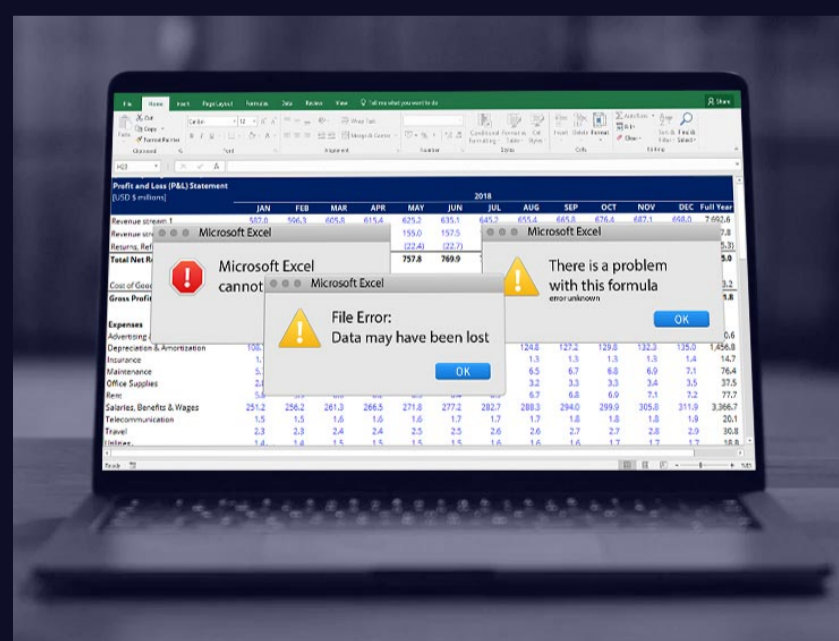

- Formulas have to be applied separately in each tab
- Cells must be protected
- Password must be remembered to enter data

PAYROLL

- Separate tabs to list employees
- Formulas need to be created for benefits, payroll taxes, and pay raises
- Protection needs to be created so only certain users see certain parts of the payroll

COLLABORATION

- Impossible without dealing with risks of broken formulas or missing links

Excel

Budgyt

- New versions of budgets can be created in seconds
- Import data where needed and use in-built tools to copy, grow, extrapolate data into the future as required.
- New versions will be stored and comparisons can be run for any versions including Actuals, Budgets, What If Scenarios, and Forecast Iterations
- Versions can be locked for no accidental changes

- Data is entered through single, intuitive data entry point
- Chart of accounts only needs to be entered once and is automatically applied to all units
- Formulas can be built to apply to all units and are listed to easily audit and amend
- User permissions restrict edits or accidental deletions of formulas and links
- Consolidation is automatic

- Custom-built payroll module with built-in formulas
- Allocate employee payroll across different business units, accounts, pay periods, or accrual schedule
- User permissions can be set so sensitive data is only visible to those who need it.

- Budget with unlimited contributors in a single, consolidated platform
- Contributors can access their budgets and analyze variances directly in Budgyt—not in separate spreadsheets
- Strict user permissions can be set by department, edit access, versions, and read-only mode
- Formulas are built away from user dashboards and can't be erred by contributors

Don't take our word for it. **Take theirs...**

The benefit with Budgyt is getting rid of the need to use Excel as the primary location to house all the budget data. Sharing permissions are excellent, so now all managers can access their budgets, submit changes, and get approvals all within this software.

Sandeep Kumar
IT Glue

"Never use excel for budgeting again. Budgyt took all of those troublesome spreadsheets for each department and cost center and condensed it into an easy way to input, track and view the information. Would recommend this tool to anyone who wants to save time, money and frustration during the budgeting process."
