

Embrace a modern Retail & Warehouse Solution for your retail company

ORACLE NETSUITE
Solution Provider

In the retail space, a critical aspect of your supply chain operations includes the warehouse and distribution centers. A warehouse management system (WMS) links the flow of materials/inventory with suppliers and customers. In today's ever-changing environment, companies are continuously improving and adapting their warehouse operations. With rapid growth and fluctuating demand, retailers need to implement a modern WMS that provides a smooth flow of operations, with high visibility, and inventory management functions.

NetSuite Warehouse Management system can support a retailer's business objectives through real-time data, full visibility of operations, demand planning, and inventory management.

Furthermore, NetSuite provides your business with a deeper view into the shopping experience by unifying other back-end operations across multiple platforms such as web and phone in addition to warehouse insights. Obtain ease of simplified tracking, better vendor relations and customer satisfaction.

Our team of experts has decades of experience in understanding the challenges faced by the retail industry and warehouse management. After understanding your business and its workflows, our team will provide you with the best NetSuite ERP solution to meet your business needs.

Key Features

NetSuite WMS

Track and manage your entire inventory across multiple warehouses, vendors, contractors and more. NetSuite WMS is supported by almost every handled device.

With NetSuite WMS users can also set up Role & Location-based settings for multiple employees in the company to avoid confusion. Custom functions can also be created in this WMS. Some of the most common functions supported by NetSuite WMS are Picking, Packing, Shipping, Moving, Transfer & Receiving among more.

For added convenience, NetSuite WMS can be easily integrated with other company operations like accounting, SCM etc. as it operates on a unified data source. NetSuite WMS also supports multi-company, multi-subsidiary, multi-warehouse, multi-currency, and multi-lingual operations with NetSuite OneWorld.

Handheld scanners support in NetSuite WMS

NetSuite handheld scanners in WMS are an important aspect. NetSuite WMS is cloud-based and is supported by almost every handheld device. Having a 3rd party WMS is not recommended as a single error or broken integration can cause your entire supply chain to come to a standstill. With NetSuite WMS in your handheld scanners, you get 100% accuracy as all the data is stored in one single system

Demand Planning & Scheduling

Maximum profits through higher customer satisfaction levels. Balance resources, reduce costs, handle vendors & external supply chain partners and predict inventory demands for a well-managed buying & delivery experience.

Key Features

Order Management

Provide an omnichannel experience and manage overhead costs for your products, set up inspection schedules, track growth and handle vendors to ensure that the best product reaches the shelves. NetSuite also provides a complete recall management solution to ensure the safety and reliability of your product

Supply Chain Management

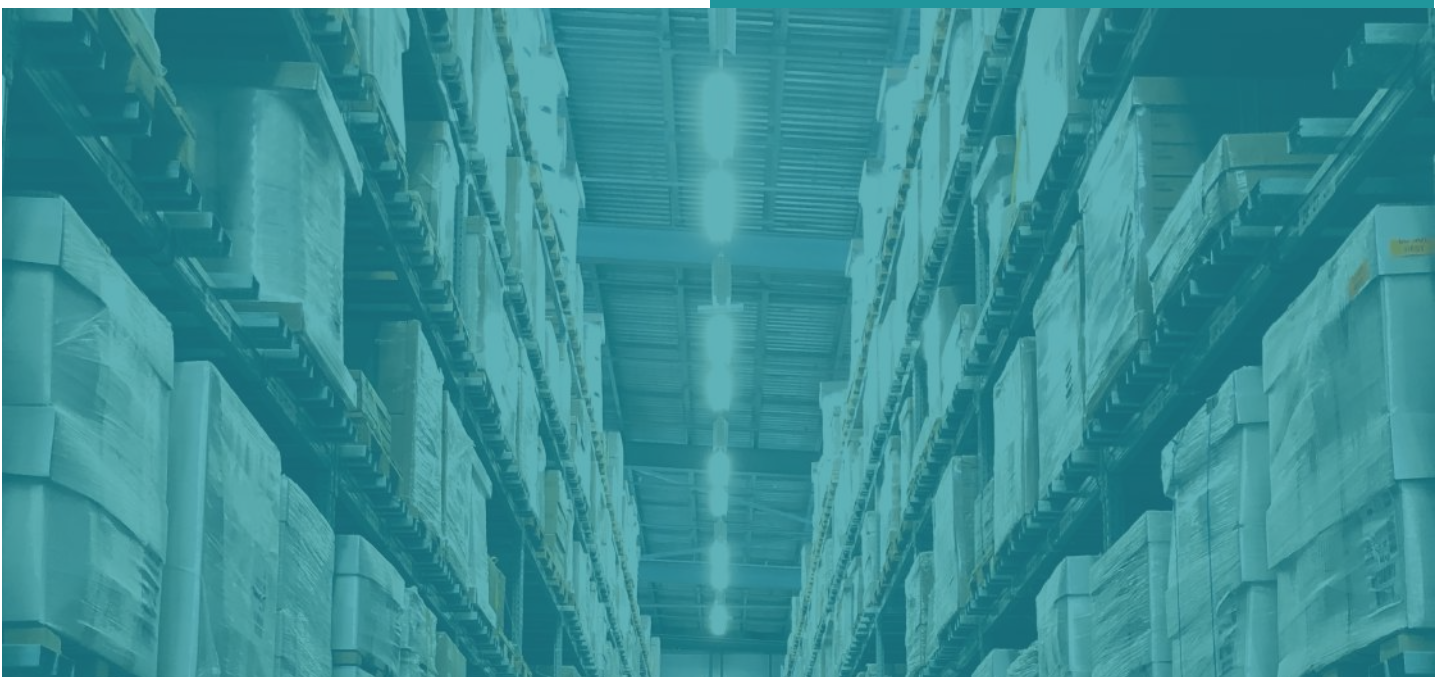

Make data-driven decisions by utilizing NetSuite's real-time view across the entire business. With real-time inventory visibility, you can always keep the most demanded products in stock. Review historical sales and forecast inventory demand to meet the needs of your customer. In addition, experience complete visibility across every department, create custom roles, setup KPIs etc. on its custom dashboard.

Inventory Management

NetSuite provides the necessary tools to control demand and supply for maintaining optimal inventory levels. This can also include multi-location inventory planning and inventory tracking across multiple warehouses, vendors, contractors and more. With NetSuite users can start efficiently tracking inventory, set up safety stock, re-order points, cycle counts, handle demand planning, supply planning and distribution requirements planning as well.

NetSuite inventory management features –

- Replenishment management
- Setting up minimum stock levels and multi-location planning
