REVIEWING LEASES IN A NEW LANGUAGE

SUMMARY

An Austrian law firm wanted to test how accurate Della could be at reviewing Austrian leases.

The firm put together a list of 77 questions that needed to be answered. They wanted to see whether they could use Della for the following use cases: multi-jurisdictional lease review and reporting, mass document review, contract risk assessment and repapering.

BATCH BY BATCH ACCURACY

PHASE 1

- LTHV pilot group review and tag 20 documents each.
- Della review data and distribute accuracy statistics.
- Della aggregate all of the data and then train a new model
- Model goes through internal tests and is released

PHASE 2

- LTHV pilot group review and tag 20 documents each using the new model
- Della review data and distribute accuracy statistics.
- Della aggregate all of the data and then train a new model
- Model goes through internal tests and is released

PHASE 3

- LTHV pilot group review and tag 10 documents each using the new model to determine final accuracy
- Della reviewed data and had a wrap-up call to distribute results and get feedback from the group

THE RESULTS*

Phase 1:
50% questions answered correctly

Phase 2
82% questions answered correctly

Phase 3
89% questions answered correctly

*The accuracy of the first batch of questions answering.
