Reco

Full Lifecycle SaaS Security

The Only SaaS Security Platform that Manages Posture, Discovers Shadow Apps, and Detects Threats

Posture Management & Compliance

Ensure your configurations are compliant. Improve security coverage and lower risk, saving time & money.

App Discovery & Shadow SaaS

Manage SaaS-to-SaaS risk. Get full visibility into apps connected (including shadow & GenAI), users, and access.

Identity & Access Governance

Ensure the right access, and not more. Understand exposure from permissions that can lead to a breach.

Threat Detection & Response

Detect & quickly respond to SaaS threats using prioritized alerts. Remediate in your SIEM and SOAR.

Fully Integrated in Minutes

Use our managed onboarding to connect Reco within minutes. Maintaining Reco requires only 10 hours/week.

50K+
Apps Discovered & Secured

10K+
Shadow Apps Discovered

60%
Less Time on IT Audits

72%
Lower Security Risk

Reco Supports These Business-Critical SaaS Applications and More

Reco integrates with 100+ apps

Organizations Worldwide Trust Reco to Improve Security Coverage & Lower Risk

> Of all competitors in the space, we like Reco the best. The information is easily digestible, very direct. It's not overloading the screen with information. This is the ideal SaaS security solution that any organization can easily pick up and get immediate time to value.

Kyle Kurdziolek
Director of Cloud Engineering at BigID

Get the Context Needed to Prioritize Risk & Reduce Time Spent on Manual Work

Reco uses advanced analytics around persona, actions, interactions and relationships, and then alerts on exposure from misconfigurations, over-permission users, compromised accounts, and insider risk. This comprehensive picture is generated continuously using the Reco Identities Interaction Graph and empowers security teams to prioritize their most critical points of risk and improve their security posture.

Reco Integrates with Existing Workflows Established in SIEM and SOAR Solutions

DEMISTO · Enterprise E5 · splunk> · paloalto NETWORKS · torq · Jira · servicenow · sumo logic · blink · LogRhythm · tines · SWIMLANE

> We knew the power of our robots, and how they could make our Sentinel SIEM more powerful. By automating the access removal process by passing Reco's contextual detections to our SIEM, we have saved thousands of hours of work, reduced the risk of data exposure across multiple SaaS shared drives, and now continue to reduce data exposure risks.

Mihai Faur
Chief Information Officer at UiPath
