ninjaOne®

Monitor, Secure, and Backup Devices with One Tool

Single-Pane Management
Centrally monitor, manage, patch, secure, and backup all your devices with one agent, in one UI.

Flexible Backup Plans
Customize your backups with flexible schedules, data targeting, and storage options that fit any business need.

Secure Backup
Safeguard your data with backups that are encrypted at rest in the cloud, locally, and in transit so you never have to worry about your backups being ransomed.

Feature-Packed Solution Designed for Remote Endpoint Backups

Remediation Tools
Remediate backups and out device issues easily with NinjaOne's built-in remote terminal, registry editor, and remote access tools.

Incremental Block-Level Backup
Minimize storage, network, and device resource utilization, reducing costs and impact on end-users.

Proactive Alerting
Receive proactive alerts if something goes wrong allowing your team to act quickly.

Secure Restore
Equip your team with web-based file restore, bare-metal restores and active-endpoint image restores that are SOC-2 compliant and safeguarded by MFA.

Windows, Mac, & Server Backups
Backup your various endpoints and servers ensuring your devices are always protected.

Self-Service File Restore
Give end-users the ability to restore their own files directly from their web browser.

Cloud-Only, Local, and Hybrid Storage
With pooled storage included, choose where you want to store backups and assign storage types by organizations, policies, or devices.
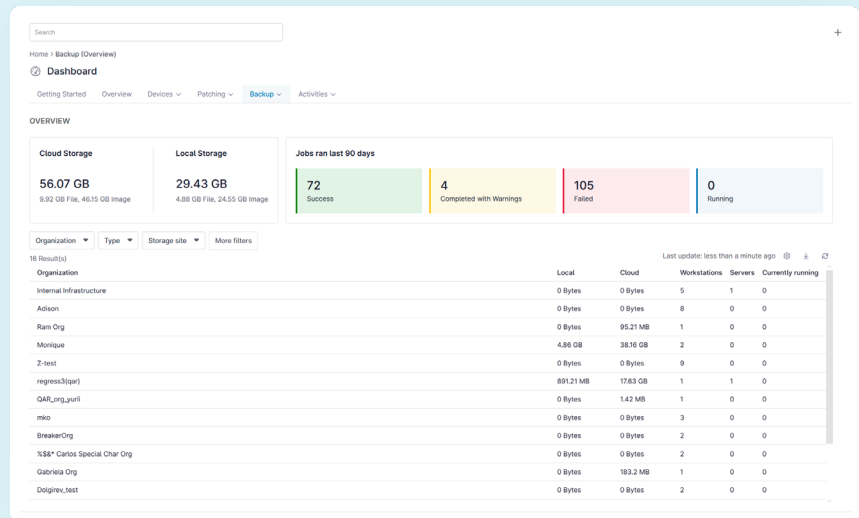

File & Folder and Image
Backup everything, or only the files and folders you need with flexible options to balance data protection against cloud storage costs.

Backup Overview

The overview dashboard gives you a top-level snapshot of your backups by devices, by storage type and history of backups.
