Business Challenge
Issues with the health of the environment are extremely critical for your business to succeed due to no failure allowed that drastically affects company revenue and reputation. According to Gartner, downtime costs $5,600 per minute on average. These results cost between $140,000 and $540,00 per hour depending on the organization.

Insight Cat

Full-stack monitoring solution, suited for both cloud and on-premise environments with the main goals - inform the Company where error happens, predict downtimes in real-time 24/7 in one click.

Infrastructure Monitoring

Logs Management

AI Insights

Synthetics Tests

Application Performance Monitoring

Error Management

Cloud and Serverless Monitoring

Solution

Full-stack monitoring solution is here that not only provides you with an overview of software/hardware system infrastructure - but also shows you the exact place where the issue takes place - a starting point that provokes critical issues from the beginning and caused merged issues with other infrastructure parts. This allows nullifying efforts to maintain the error fast and efficiently allowing your services to get back on track asap.

Forget about spending hours of research finding the bug - with the help of the Insight Cat it will be visible immediately. Knowing your infrastructure and its software/hardware components inside it, collecting logs, data, and track system behavior patterns - our platform provides your business with AI Downtime prevention functionality that helps to avoid downtime and minimize the impact of planned outages. This is an exceptional part of our product with the main goal - forecast all possible issues based on received and tracked data and alert them to the Client before it happens. It's better to be informed upfront rather than after the issue happened.
