How growing companies are modernizing finance with confidence and control

Five real-world examples of how SAP Cloud ERP drives finance efficiency

From complexity and constraint to control and confidence

Across industries and regions, finance leaders are under pressure to move faster, strengthen control, and modernize with AI—while keeping operations stable and scalable.

That's why growing companies are choosing SAP Cloud ERP to:

- Connect finance and operations on a single, trusted data foundation.
- Gain real-time insight for faster, better-informed decisions.
- Standardize core finance processes with industry best practices.
- Automate manual work with built-in controls and embedded AI.

Here's how that plays out in the real world.

Five growing companies. One modern finance foundation.

01. Western Sugar

Western Sugar improved cash control and efficiency without adding complexity—freeing finance to focus on growers rather than paperwork.

Outcomes:

- **25%** faster invoice processing
- **$8 to $6** individual invoice cost reduced
- **40,000** invoices processed automatically each year

How they modernized: With tight grower margins and high invoice volumes, Western Sugar needed to quickly reduce costs and risks in accounts payable. With SAP Cloud ERP, the company replaced paper-heavy, error-prone workflows with AI-enabled, end-to-end automation across multiple states.

02. Al-Rawaf Contracting Company

Fast-growing construction company supporting infrastructure and development projects across Saudi Arabia

Outcomes:

- **90%** paper processes digitized
- **80% - 90%** core finance activities automated
- **15 to 5** payroll cycle time improvement

How they modernized: As Al-Rawaf expanded to support large-scale infrastructure projects aligned with Saudi Vision 2030, the company needed stronger control without slowing execution. By replacing paper-based, disconnected systems with SAP Cloud ERP, Al-Rawaf built a single digital backbone across finance, HR, procurement, and project operations, enabling real-time, data-driven financial insight.

03. NUMEN

NUMEN created a solid finance foundation for international growth—proving that speed, control, and scalability don't have to be trade-offs.

Outcomes:

- **15 weeks** time to go live
- **50%** faster month-end close
- **40%** reduction in manual finance work
- **15%** decrease in back-office staffing needs

How they modernized: As NUMEN prepared to expand internationally, the company replaced its legacy ERP with SAP Cloud ERP to standardize finance processes, strengthen compliance, and gain real-time visibility across countries. The cloud-based platform centralized finance, sales, and purchasing data, enabling rapid deployment without adding operational complexity.

04. De Prado

De Prado improved transparency and efficiency at a global scale—without carrying forward customization debt or limiting future agility.

Outcomes:

- **20% - 25%** less time spent on repetitive tasks
- **50%** month-end close time reduced
- **200+ company code** unified finance and operations data

How they modernized: As international operations expanded, De Prado moved away from a heavily customized on-premises ERP to SAP Cloud ERP, supported by SAP Ariba Invoicing, to standardize finance, purchasing, and manufacturing processes. Built on industry best practices, the new cloud foundation centralized data across hundreds of entities, reduced manual work, and improved transparency across locations.

05. Sonnedix

Sonnedix gained global visibility and consistency—without sacrificing local flexibility or slowing expansion into new markets.

Outcomes:

- **2x faster** UK month-end close
- **500+ legal entities** managed on one system
- **10+ countries** real-time analytics and stronger control

How they modernized: Operating renewable energy assets across more than 10 countries, Sonnedix needed consistent reporting and stronger financial control across regions. The company consolidated 13 separate ERP systems with SAP Cloud ERP, supported by SAP Analytics Cloud. Standardized finance processes and a single source of truth enabled real time insight across countries and legal entities.
