

Polarion Jira connector

Scenario 2

Sample scenario for Polarion ALM™ software – Atlassian Jira integration. This graphic documents just one possible scenario requested by the user. The connector is flexible enough for a two-way exchange of information.

You are using

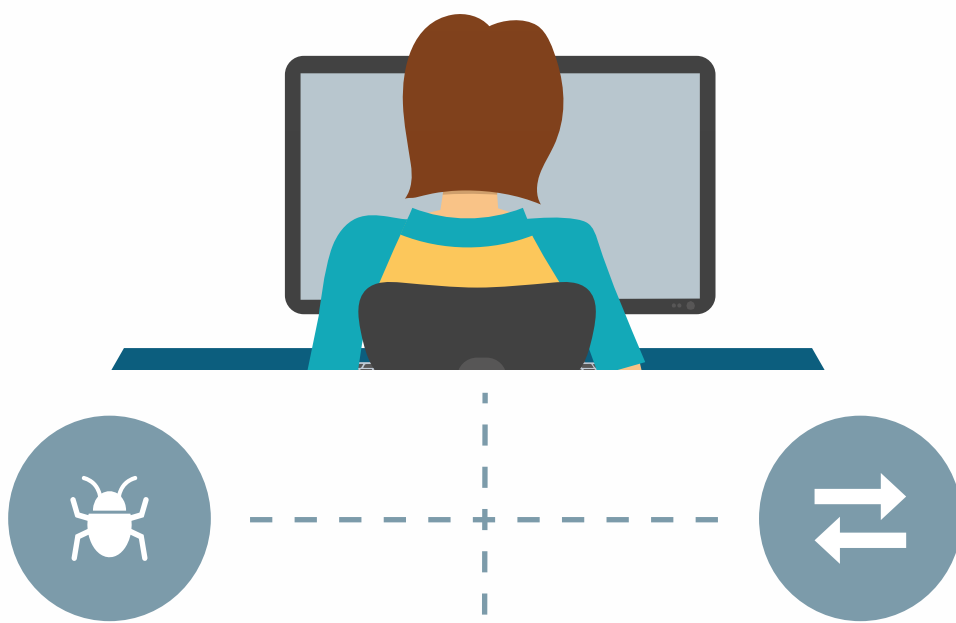

Polarion ALM for the full application lifecycle management

- Requirements management
- Test case management
- Traceability and impact analysis
- Integrate popular test automation tools
- Live reporting
- Release planning and management
- Microsoft® Office 365®
- Change control of your requirements and specs documents

Traceability and workflow of any artifact from business case, use case down to task, issue, or source code revision

However, you can still continue to use Jira as a tool connect to external users, partners or even internal users who want to use Jira

Known issues are published from Polarion to Jira

Change requests or Jira issues can be setup to be copied from Jira to Polarion for full synchronization

Happy customers
