SO YOU ALREADY HAVE A SCHEDULING TOOL

- Using a mapping application to calculate best route for each team member's daily schedule is a good first step.
- Yet, team members are still driving across town and passing each other on the road all day long.
- Were those visit assignments calculated and planned to be "best-fit" with the shortest driving distance? Or is today's "best" route just a Band-Aid placed over an inefficient visit plan?
- Highest efficiency is achieved not only when each day's route is optimized, but when the visit assignments for your entire team are optimized across multiple days or entire episodes of care.

It's simple: less driving reduces costs and makes your resources more productive

SCHEDULING IS A SCIENCE NOT AN ART

Homecare Intelligence (HCI) offers an easy-to-use, location-aware scheduling and resource management tool to help you quickly deliver the best possible schedules. Use HCI as a stand-alone scheduling tool or integrate HCI with your clinical EHR.

HCI uses advanced analytics to evaluate visit types, distance between patients, proximity to existing patients, clinician availability, patient preferences, and much more to generate optimal schedules.

With a button click, you can: quickly re-assign a day's visits, instantly determine whether (and how) you can admit a new patient, find a recurring "best slot" for a new episode, or generate an optimal schedule for an entire team.

"A powerful tool that has revolutionized the way homecare is delivered."

Cathy Hecimovich
CEO, Central West Community Care
Access Centre, Ontario, CA

ARE YOU OPERATING IN THE STONE AGE OF SCHEDULING?

Does your software identify the best resource based on your entire team's current workload and their proximity to both the new patient *and* their existing patients?

This capability is the key to providing the most efficient schedules possible.

Does your software identify resources for all unassigned visits for the entire day at the same time with one click of a button?

It's critical to evaluate all visits at the same time, since one wrong decision has a cascading effect on all other visit assignments.

Does your software effectively manage resources to support your continuity of care initiative?

You must be able to identify the best resource to complete all visits for a patient's episode and recommend primary or alternate resources.

Logistics science harnessed—
to benefit your patients,
your staff, and your bottom line

SCHEDULER BENEFITS

Eliminate headaches from the job with easy, smart scheduling tools.

Drastically reduce time to complete unassigned visit load.

Assign all visits for a day with a single click.

Reduce no-show and accelerate assignment handling with automated messaging to clinicians and patients.

CLINICIAN BENEFITS

Slash drive time to complete required visits.

Mileage reimbursement automatically calculated.

Intuitive mobile app to manage the day with the ability to sequence visits on the fly.

Secure messaging with scheduler and care team.

Easily contact patients and physicians.

MANAGEMENT BENEFITS

Reduce mileage reimbursement.

Alleviate staffing shortages with increased capacity.

Reduce scheduling investment.

Eliminate need for scheduler tribal knowledge.

Have confidence your agency's goals and initiatives are considered every time a visit is assigned.

Increase Capacity

It's simple: if clinicians are driving less, they can increase their visit capacity without increasing costs. HCI uses a holistic, location-aware approach to provide the best schedules for all resources.

Increase Productivity

Are your resources meeting their productivity goals? The easiest way for high-performing agencies to increase productivity is to minimize the amount of drive time.

Increase Scheduling Efficiency

HCI customers experience a transformative reduction in headcount needed for scheduling, and an equally significant reduction in working time needed to complete schedule assignments.

Slash Transportation Cost

By drastically cutting drive time, HCI customers also enjoy significant reductions in transportation expense. The cost savings typically exceed the software cost of HCI within a few weeks.

Alleviate Staffing Shortages

Do more with less. By increasing capacity for your existing team, the impact of staffing shortages becomes less acute.

Improve Communication

HCI's messaging automation tools ensure that every patient gets a confirmation call or text ahead of their appointment. And it's easy to automate new visit pick-up by staff, or broadcast weather cancellations to all staff and patients.

PRODUCTIVITY CAPACITY COST CONTROL SIMPLICITY

Today's home health industry has changed dramatically. Payment cuts, resource shortages, and value-based purchasing jeopardize the existence of many home health agencies. Yet those that adapt and survive are poised to benefit enormously from an aging population.

Agencies that thrive know how to elevate the productivity of their most important resource—their clinicians. Productivity entails not only using clinicians wisely, but also:

- maximizing clinical capacity
- reducing travel time and cost
- ensuring high employee retention rates
- improving patient satisfaction and minimizing training and HR expenses.

Homecare Intelligence offers the tools you need to maximize clinician productivity while feeling confident that every visit assignment is the best possible assignment that promotes the strategic goals of your agency.
