

CMMShere

The new **easy and intuitive** way to manage the technical services and maintenance in a **controlled and organized** system in your company.

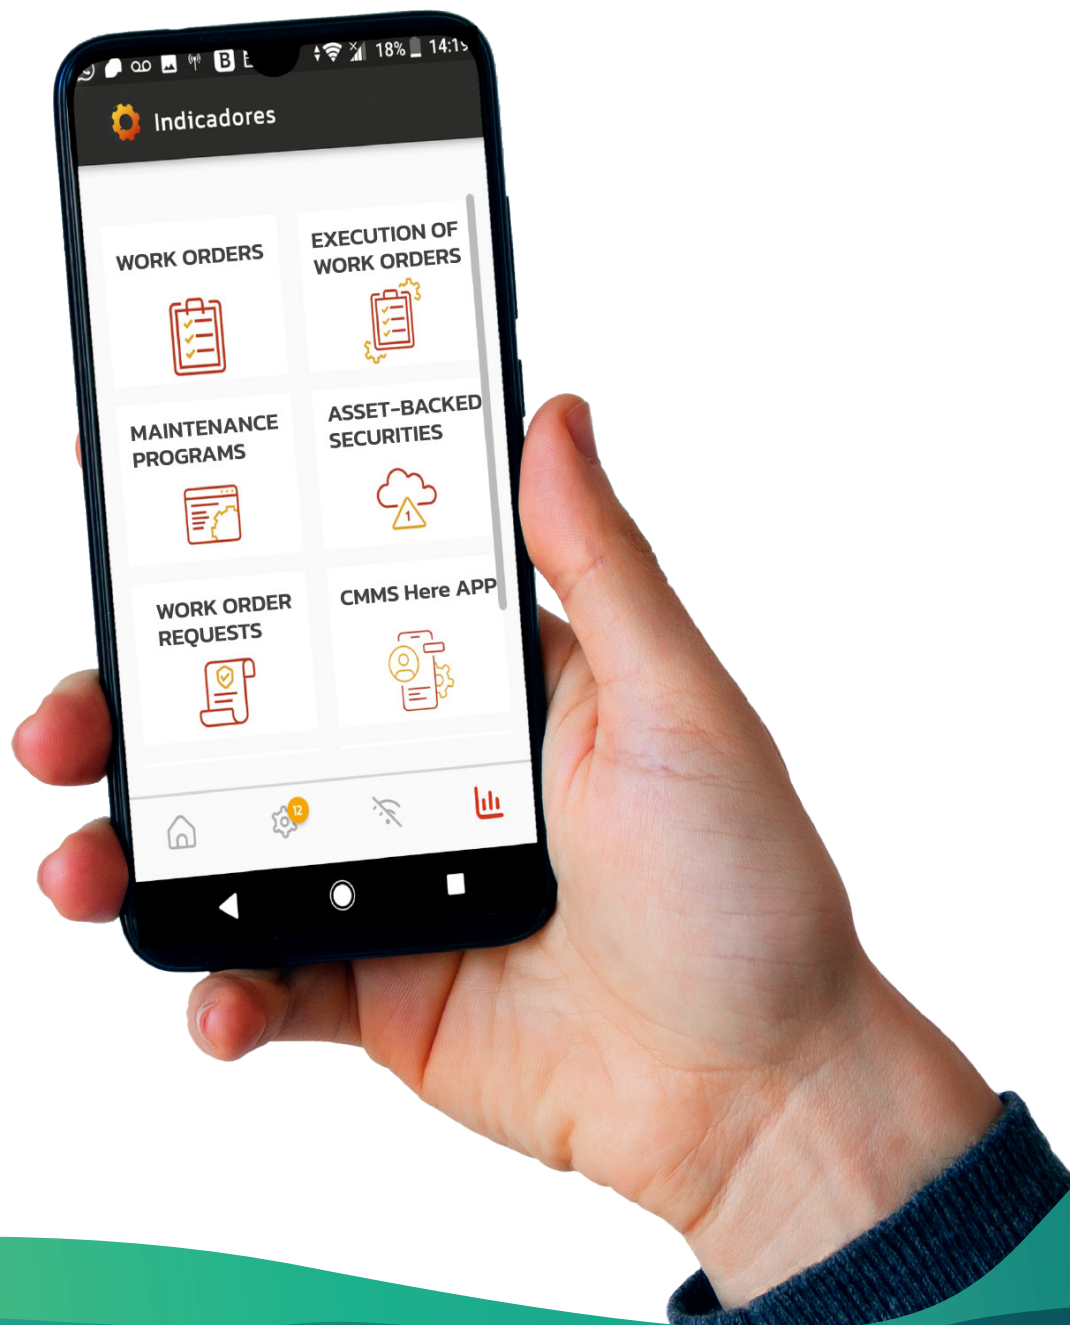

What is CMMShere?

Our platform is a CMMS, computerized maintenance management system, which is a SaaS software in cloud model, designed to work for your organization, it is flexible for your needs, intuitive and easy to use which will help you to manage and control:

CMMShere mobile, designed to make your work easier

With our CMMS application, mobility becomes your best ally. **Forget about hard-to-reach places** where carrying a computer is impossible. CMMShere offers you a robust mobile solution designed to **simplify the life of your technicians**. Now they can carry out their work procedures even in **locations without Internet connection**, and **generate online reports instantly**.

SaaS CMMShere easy to operate.

Managing maintenance through spreadsheets, text documents and handwritten forms can become a monumental task and extremely complicated to manage and control.

Our desktop version is designed especially for planners, offering a user-friendly interface and a streamlined user experience.

Why choose CMMShere?

Improves communication between work teams:

You encourage efficient communication among team members, promoting collaboration and coordination through the platform.

Increases the quality of management:

You can improve customer satisfaction by reducing asset downtime and improving service quality with further optimization of planning and provision of complete information to the end customer.

Improved decision making:

It makes it easy for you to track key performance indicators and make data-driven decisions through a comprehensive dashboard of reports and KPIs.

Increases the productivity of the maintenance area:

It will help your technicians do more work in less time. They will have tools that will make their work more professional.

Reduces maintenance costs:

It will allow you to step up to a real-time data-driven strategy that will reduce unscheduled downtime and corrective maintenance costs.

Perform preventive maintenance:

CMMShere preventive maintenance (PM) scheduling software allows you to generate calendar and/or meter-based schedules to set up a work timeline, making it easier to prevent failures and reduce costs. Optimize your preventive maintenance scheduling to ensure that all your work is done correctly and on time.

Increased availability of assets:

With CMMShere's powerful asset management functionality, you can seamlessly track and report on the history of all your most critical assets and help you extend their useful life and maximize their performance, with a geo-referencing system that is at the cutting edge of technology.

Analysis and failure repairs:

It will strengthen your ability to effectively address corrective maintenance. Our platform allows you to track and analyze failures in real time, identifying trends and patterns that help prevent future problems. This results in less unplanned downtime and lower costs associated with unplanned emergency repairs.

World-class cybersecurity:

Our platform is designed with robust cybersecurity measures to secure your information, with advanced encryption, controlled access, regular updates and patches, daily data backup, protection and continuous monitoring.

Return on Investment (ROI):

Every dollar you invest in our computerized maintenance management system returns an additional 15% in profits and efficiencies, which translates into cost savings, increased productivity, reduced downtime and increased customer satisfaction.
