

FIELD by CMiC manages all aspects of a construction firm's project delivery operations. Specifically, Field allows a company to seamlessly collaborate with all project stakeholders, control changes, manage the supply chain of subcontractors and material suppliers, simplify the bid process and manage documents. In addition, FIELD optimizes forecasting and resource planning with its financial underpinnings, providing verified costs for every transaction source. Using Field, firms complete complex projects with tightly managed costs and timeframes – on spec, on time and on budget.

 <h3>PROJECT MANAGEMENT & COLLABORATION</h3> <ul style="list-style-type: none"> • RFIs & Submittals • Meeting Minutes & Daily Journals • Checklists & Punch Lists • Subcontracts & Change Orders 	 <h3>PROJECT CONTROLS</h3> <ul style="list-style-type: none"> • Job Costing • Job Billing • Change Management • Subcontractor Management 	 <h3>ENTERPRISE PLANNING</h3> <ul style="list-style-type: none"> • Resource Planning • Opportunity Management • Scheduling

FIELD by CMiC doesn't simply enable construction teams to work efficiently in the field; it sets the stage for future growth – at little to no added overhead cost – by seamlessly integrating with planning and financial systems. FIELD captures and organizes data from every job site in a consistent way, allowing a company's leadership to draw richer insights from all data—in real time.

THE MOST COMPLETE FIELD CAPABILITIES

Purpose-built on a Single Database Platform™, CMiC FIELD delivers a complete set of unified capabilities for your project delivery organization:

- Project Management & Collaboration**
 Helps you manage all project-related communications and subcontractor activity while gaining instant access to information captured from every site.
- Drawing Management**
 Regain your team's productivity by deploying a single system with native drawing management capabilities
- Project Controls**
 Maximizes the profitability of every job by continuously monitoring—and quickly adjusting—project budgets.
- Enterprise Content Management**
 Helps you take control of your workflows, content assets and analytics.
- Enterprise Planning**
 Optimizes resources, schedules, opportunities and financial forecasts.
- Mobile Applications**
 With anytime, anywhere access and an intuitive interface, streamlines data collection, workflow management and analytical reporting for your entire field team.

YOUR PROJECT TEAMS HAVE NEVER BEEN ABLE TO DO SO MUCH

DOCUMENT MANAGEMENT

FIELD gives users complete control of the **design execution lifecycle** by facilitating the exchange of communications, drawings and other assets throughout the design and approval process. Field also makes it easier for teams to manage the **project closeout documents** that smooth out the transition to the next project. Teams maintain **all versions of revised documents**, including CAD files, photos and Microsoft Office documents; detect project anomalies early enough to implement course corrections; and track bonding, lien waiver and other user-defined requirements.

SITE MANAGEMENT

Enter critical information from the job site in real time, ensuring that project executives always have access to up-to-date snapshots of where a project is and where it's headed. Because Field is built on a Single Database Platform™, **information entered from job sites is accessible from the corporate office**, eliminating the need for duplicative data entry.

COLLABORATIVE MANAGEMENT

Proactively manage and guide all communications with vendors during the bid process; track and create unlimited meeting minutes; record and monitor all project-related communications; receive proactive alerts based on actionable items; perform ad hoc information requests; and **control the flow of communication between all project stakeholders**.

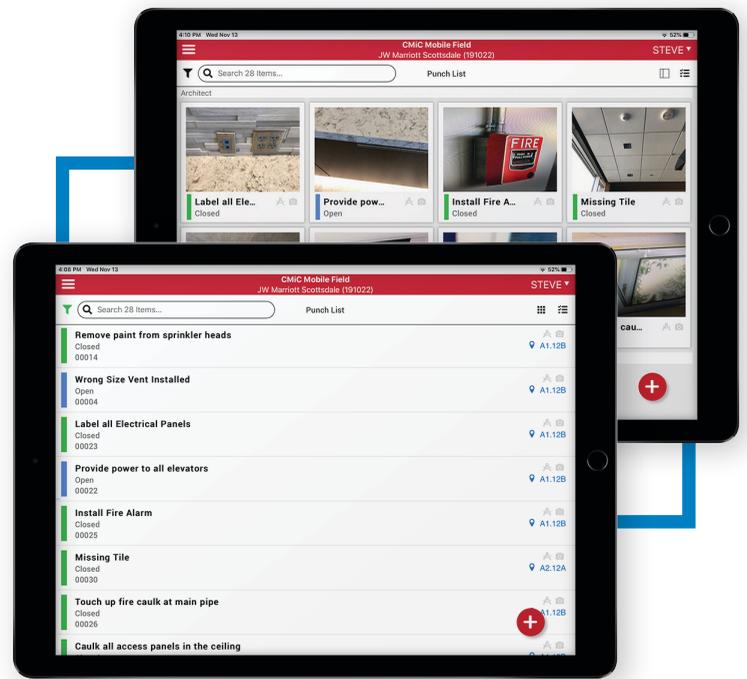

COMMUNICATIONS MANAGEMENT

Tracking all the communications associated with a project can be daunting. The larger the project, the more parties are involved, leading to a greater volume of communications. Because construction projects are time-sensitive, teams need to base decisions on the most up-to-date information and ensure that it is shared on a real-time basis with all parties affected. Field leverages a single database to **seamlessly track, organize and share information to empower teams with the most actionable insights possible**.

DEPLOY IT FAST

FIELD by CMiC is available as a standalone suite and includes everything a construction firm needs for project management. The advantage: construction firms of all sizes – and small firms in particular – can now **replace spreadsheets and basic project management tools with more robust FIELD management software**. Importantly, FIELD can be deployed inside 30-45 days as part of a multi-tenant Cloud environment (SaaS).

Ask an expert and determine your solution today!

CMiC delivers the most complete, unified and advanced enterprise and field solutions for construction and capital projects firms. CMiC's powerful software transforms how firms optimize productivity, minimize risk and drive growth by planning and managing all financials, projects, resources, and content assets—from a single database platform.
