

UpKeep

Why Use a CMMS?

Computerized maintenance management systems (CMMS) are the key to reducing maintenance costs, increasing visibility, and improving productivity. Here's what we think is most important to look for in a new CMMS and what we've designed UpKeep to solve.

1 – Group Collaboration

In today's world, a CMMS should be a group collaboration tool for you and your entire maintenance team. When there is an issue, you want the people involved to be notified immediately with details on where to go and how to fix it. This is something that we found most CMMS systems lacked, but at UpKeep, we are committed to improving communication between everyone on your team.

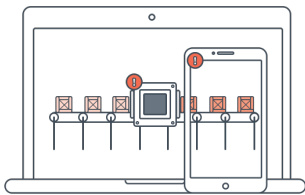

2 – Work Order Mobility

With technicians spending most of their time out in the field, they shouldn't be tied to their desk entering information into a CMMS. A CMMS should be fully portable and your technician should be able to close work orders, signal issues, and take pictures on the spot. We truly believe that a CMMS should be a mobile first product.

3 – Asset Management Reporting

A CMMS should track the entire lifecycle of an asset. It should hold a preventative maintenance schedule and also show a history of previous work orders performed on a particular asset. With UpKeep, you can instantly create and view reports to reduce downtime for your most valuable assets.

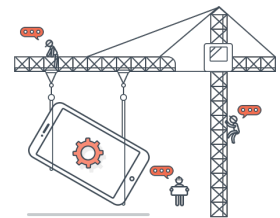

Access Anytime & Anywhere

From your desktop web browser to your phone (iOS & Android) and even your tablet, UpKeep is easily accessible from anywhere at any time. Create work orders on-the-go, get notifications when tasks are updated, and receive alerts straight from your app making your business run more efficiently than ever before.

Simple & Customizable

UpKeep was designed to help streamline communications for *your* team. Make every work order fit *your* needs. Our work order forms can be customized for measuring values, creating checklists, and tracking general notes. You can even add files, pictures, or parts to individual tasks and set the priority level.

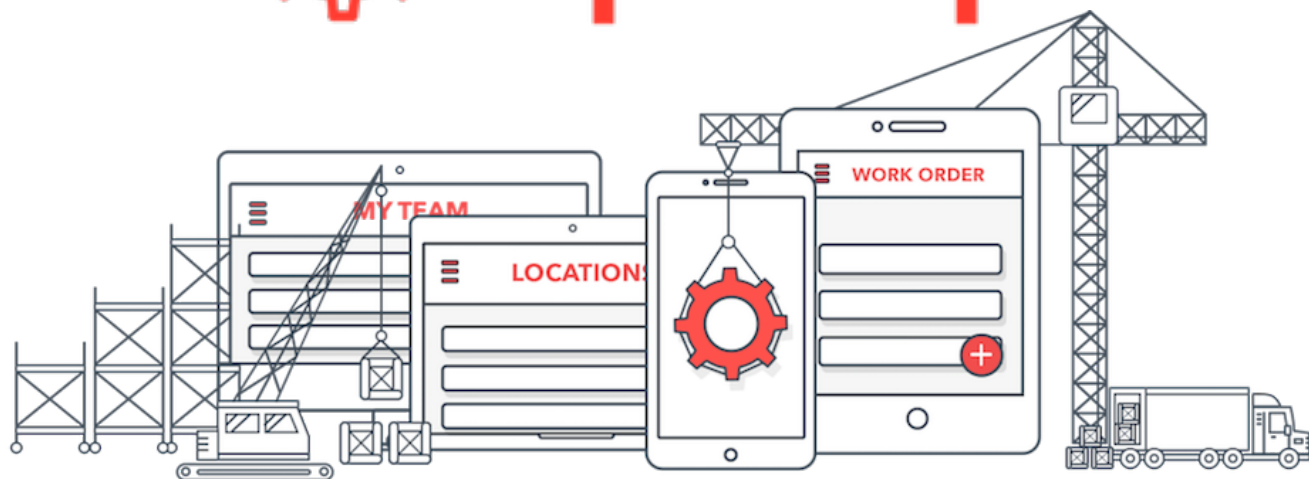

Fast & Secure Data

UpKeep is easy to set-up and doesn't require you to buy or install any hardware. All data is backed up daily and securely stored in the cloud. This means you can readily access your business information from any device. Just log in to securely share data and collaborate with your maintenance team.
