

Real-Time Visual Reporting Native to NetSuite

iCharts is the leading native visual reporting application for NetSuite

Build robust visuals and analytics without leaving your NetSuite dashboard

Improve Agility

Manage your business in real-time, not based on outdated extracts or spreadsheets

Increase Productivity

No need to export your data; visualize your business within your NetSuite dashboard

Reduce Complexity

Create and share interactive visualizations without ever leaving your NetSuite dashboard

“Gaining real-time customer support and implementation intelligence is critical to our success as it improves our customer experience. iCharts allows us to increase our visibility through real time customer support dashboards embedded in NetSuite.”

Todd La Fever

iSolved – President of Employer Services & Technology

The iCharts Advantage

Native to NetSuite

Nothing to install; iCharts was built for the cloud. All you need is a web browser and your visualizations appear within your NetSuite dashboard.

- *Real-time data:* Your charts always reflect the real-time transactional data
- *Highly Interactive:* Turn data series on and off, zoom and hover
- *Powerful filtering:* Include as many data filters within the chart as you want
- *Rich drill-down:* Drill across dimensions and down to transactions

Built For Business Users

Create powerful visualizations in minutes without data preparation or cutting and pasting data into Excel. Probe data sets and drill-down visually to identify further metrics.

- *15 pre-built chart types:* Extensive library to help you build the right charts
- *Templates:* Save and re-use your branded templates, including your logo
- *Drag-and-drop design:* Intuitive user experience to design your charts fast
- *Pixel-perfect design:* WYSIWYG editor allows you select options down to the HEX color for each element
- *Mashups:* Combine multiple data sources into a single dashboard

Share and Collaborate

Annotate and share your visual analytics. Export into popular formats to embed into your presentations.

- *Export to multiple formats:* JPG, PDF and PPT allow you to include the charts into your documents.
- *Annotation/commenting:* Add comments on the charts for additional context
- *Sharing:* Share your charts with others in your organization

Secure

Your data never leaves NetSuite, you control access to all visualizations using your existing NetSuite access roles.

- *No data transfer:* Your data always stays within NetSuite
- *SSO:* Use your NetSuite credentials to get access
- *Role-based access:* Leverage existing NetSuite roles to ensure data can be viewed only by those users that have access

360° View

Create visual analytics that bring all your system's data together to construct a company-wide view of your business.

- *Multiple data sources:* Import external data sources to visualize alongside your NetSuite visualizations (e.g., Salesforce, Google Analytics, social media data)
- *Automated data modeling:* Metadata extracted directly from NetSuite saved searches
- *Real-time data aggregation:* No need to extract and pre-aggregate data
