

Migrate your BI.

Arrive with agentic analytics.

AI does the rebuild. Our engineers supervise every step.
You approve. Days to weeks, no quarters.

80%

of the work automated

days - weeks

typical timeline

50 - 80%

fewer duplicate metrics

2 - 5x

faster AI use cases

How it works

- 01**
Analyze & extract

AI agents inventory every metric and dependency. Including the hidden logic.
- 02**
Translate & clean up

Converted to GoodData's semantic model. Broken and duplicate logic stays behind.
- 03**
Model & standardize

Every metric defined once, documented, traceable to its source.
- 04**
Roll out in phases

Staging first, validated on your real data. No disruption for users.

What you get on top

- Agents for every user**

Agents investigate, explain, act, and monitor, running governed business workflows end to end.
- Build your own agents**

Create agents for specific roles and workflows, with governed skills, data access, and actions.
- Bring your own agents**

Connect your existing agents through MCP to governed business context, metrics, and actions.
- Your rules**

Choose the LLM, set access and cost controls, and deploy in our cloud or yours.

Why you can trust the numbers

- Validated on your real data
- Version-controlled & traceable
- Staging first, rollback always
- Nothing quietly disappears

Three ways to run it

- We do it**

Professional Services runs it end to end. You approve.
- We do it together**

Your team drives, our engineers handle the hard parts.
- You do it**

Your team, our tooling and playbooks, support on call.
- Bring one workbook to the first call.**

We'll show you exactly what its migration looks like, on your own content.
