

In any industry and almost every company, document pain exists. From disorganized files, inefficient paper-based processes, difficulty sharing information and collaborating together, insecure files, and more—the costs of document pain are skyrocketing, both in terms of wasted manpower and literal costs that come from human-error, fines, and security breaches. While many organizations have begun to make headway into solving these problems, it's becoming impossible to function properly without a better way to manage documents and complete the associated work that they create.

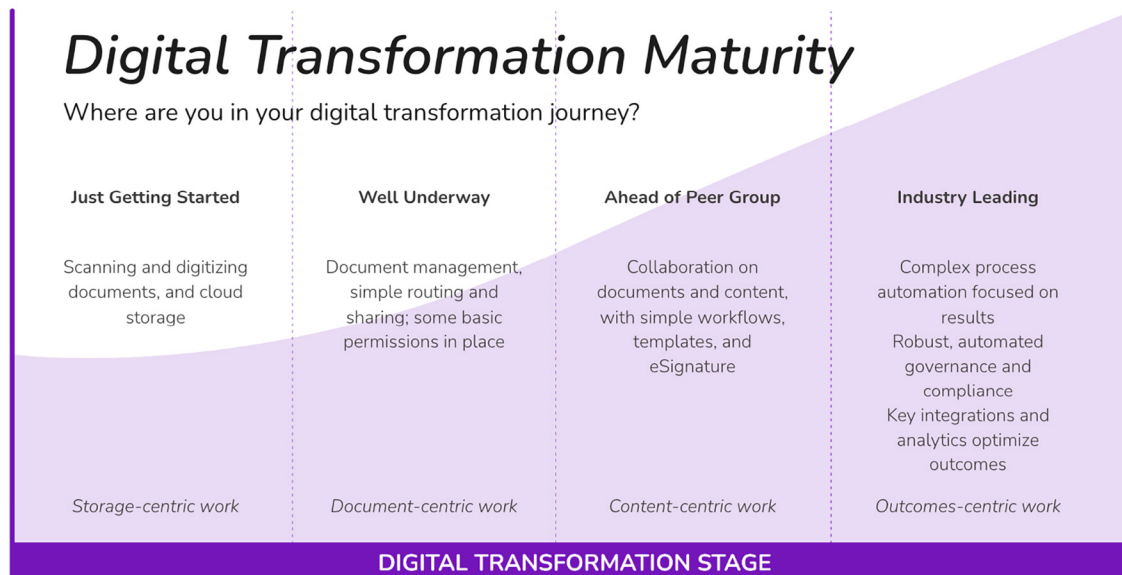

That's what Revver is for. We turn document pain into benefits that power document work and organizational growth. Regardless of what document pain you're experiencing, we power our customer's digital transformation journey forward, helping them experience rapid productivity gains, unlock growth opportunities, and put documents to work for them.

WHAT IS REVVER?

Revver is a work-centric document management system that goes beyond what legacy document management can do. Our customers use Revver for more than just organizing information and files. Revver automates entire document processes, improves document findability, creates a secure environment for collaboration, and ensures document security, compliance, and governance. We power our customer's digital transformation journey by turning document pain into benefits that power document work.

In today's world, every company is on a digital journey, whether they're at the beginning of their journey and only doing simple digital storage, or whether they're leading the charge by automating processes and building robust systems for managing document work. Regardless of where our customers are on the digital transformation curve, Revver helps them improve and move forward along the journey, so that they can achieve their digital transformation goals with a long-term goal of realigning an organization to use technology for outcome-centric work.

HOW DOES REVVER BENEFIT ME?

We do it through these five core areas: Organization, Findability, Collaboration, Automation, and Security & Compliance.

ORGANIZATION

By fixing problems that come from disorganization, Revver sets the foundation for documents work. When you know where your documents are, how they are consistently named and structured, and that they are securely in the right place, you've set the table for the rest of your document work.

FINDABILITY

Once content is organized, structured, and secured, the first productivity gains come from being able to find your documents. But it's more than just organization. Revver provides reliable searching capabilities, from keyword search, advanced search, OCR, and metadata. These features mean you can instantly find the documents you need, even if you don't remember the exact location it's stored.

COLLABORATION

Revver enables interpersonal collaboration on documents as well. Revver provides the tools to easily share content with colleagues and clients, as well as the tools to work on those documents. With the ability to leave comments, annotations, integrated eSignatures, as well as append/prepend, and even coedit in Microsoft 365, any document work can be done in Revver.

AUTOMATION

True power in document work comes from automation. Revver puts automation and workflow in the hands of every user, with a no-code workflow engine designed to help you automate organization and collaboration, and complete entire end-to-end document processes. By automating long document processes, users not only power efficiency and growth, but their work is completed more reliably and with fewer errors.

SECURITY & COMPLIANCE

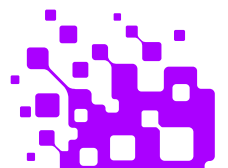

None of these key features were designed without security in mind. Revver encrypts every stored file with bank-grade encryption, while providing all the controls you need to customize your security to your exact needs. Users can even automate the process of setting access controls, retention policies, and more, so every file that's stored in Revver automatically inherits the appropriate access and security policies. We make it possible to automate compliance without having to manage the security on every document, so our customers can rest assured that their documents are safe.

We're confident in our ability to bring these benefits to customers because of our deep experience transforming and modernizing document-dependent processes. We've helped customers and businesses across a wide array of verticals, such as accounting firms, healthcare providers, insurance companies, manufacturing, and social care, just to name a few. We help power document-dependent work across many use cases, including employee management, client management, new customer onboarding, and repetitive operations, and we can help you as well.

SUMMARY

At Revver, we're more than just document management. We're focused on helping companies digitize and automate all of their document-dependent work, transforming your document work and processes from a burdensome task to a powerful source of positive growth and impact. By doing so, our customers experience dramatically improved efficiency and process improvements, which in turn drive positive business outcomes and real growth.
