

Forms Automation

Let anyone on your team build dynamic, advanced forms in seconds with our AI-powered, drag-and-drop digital forms builder. Digitize forms, automate form-driven workflows, and delight employees and customers — without coding.

Is your organization bogged down with paper forms that slow the business and create downstream errors? Are your digital forms limited to plain-looking, static data entry pages with few customization options and integrations?

Non-optimal forms can negatively impact business-critical processes, resulting in process inefficiency, data errors, and poor customer experience.

You need an easy yet powerful way to create dynamic, customized, and attractive forms that seamlessly send data to any system.

Welcome to quick, codeless form generation. With Forms Automation, part of the Nintex Automation CE platform, create simple to complex forms in no time. Save time, reduce errors, and optimize the customer experience by collecting all the right data at just the right time.

AI forms generation

Use AI agents to create forms automatically from simple instructions or PDF files — then translate them online in just seconds.

Drag-and-drop design

Simply drag your selected form controls onto the canvas, define your rules, and publish. Build intuitive, branded, mobile-friendly forms in minutes.

Built-in translation

Our built-in forms translation tool handles 100+ languages instantly.

Workflow integration

Digital forms are just the beginning. Seamlessly drive downstream workflows with native forms data and automate your entire forms-based process.

Business Benefits*

100s of hours
of admin work freed
up each year

85% faster approvals
and **70%** faster billing

\$1,000s saved
in data entry, printing,
and reporting costs

80% reduction in
document handling time

300% increase
in employee efficiency

Hours to create forms,
not days or weeks

* Metrics based on results seen by active Nintex customers.

“

Implementing the visitor registration form so quickly just wouldn't have been possible without Nintex.

Victor Kong
IT Manager
National Gallery Singapore

“

My new form tool is Nintex. Period. All my development is in Nintex, and I no longer have to touch InfoPath. In fact, when I need a new update to an InfoPath form, I just rebuild it in Nintex.

Erin Glen
SharePoint Solutions Architect
Goodwill of Virginia

“

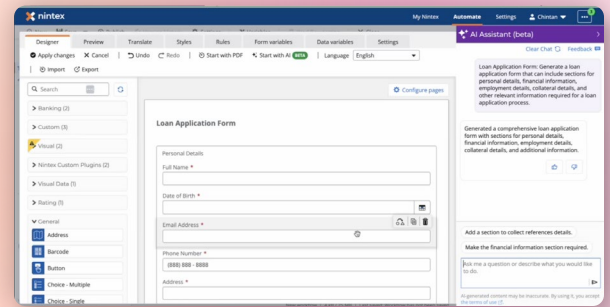

We have other tools; We're a big Microsoft shop. But I know I can do it simpler and easier, and get it done faster, with Nintex.

Nintex Forms Capabilities

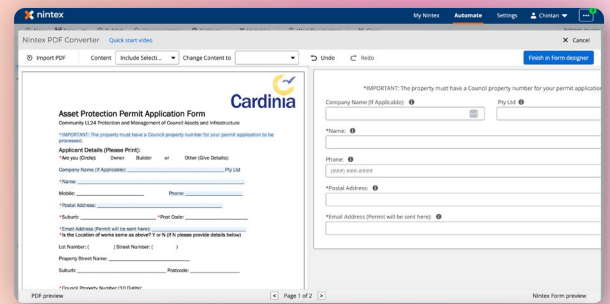

Generate forms with an AI Assistant

Let our AI Forms Assistant automatically generate forms for you. Tell it what type of form you want, and the AI Forms Assistant does the rest. Continue conversation with the assistant around form structure, fields, and conditional logic until you're satisfied. Supports all form field types including text inputs, dropdowns, checkboxes, etc. and over 100 languages.

Convert PDF forms to dynamic fillable forms

Use AI to automatically generate fillable digital forms from static PDF forms with just a few clicks. Convert the entire PDF form or a portion. Post-conversion, you can configure controls, change the form layout, add styles and rules, etc. before publishing. These forms can then capture data, start a workflow, or be sent to someone as a task.

Create the exact forms you need

Rapidly build robust forms the way you want them. Easily drag in available form controls, from barcode scanners and multiple-choice options to geolocation tabs, images, and attachments. Present a truly customized forms experience with modified controls or new ones you create. Add new question types, tables, and charts. Deploy customer error messaging and integrate field-level data intelligence.

A screenshot of a 'SAFALO Vendor Onboarding' form. The form includes fields for 'Vendor Name', 'Address', 'City', 'Zip/Post Code', 'Country', 'First Name', 'Last Name', 'Phone Number', and 'Email'. It also has a 'Description of work' section with a 'Billing Cycle' dropdown, a 'Currency' dropdown, and a 'Start Date' field. The form includes a 'Submit' button and a 'Cancel' button.

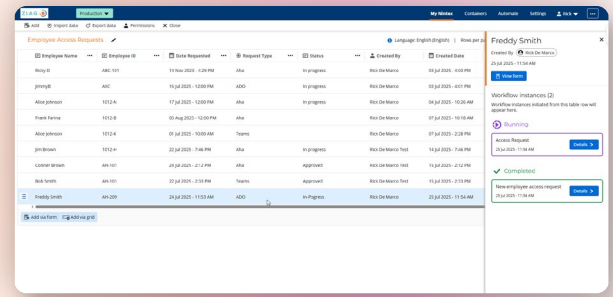

Build intuitive forms your users will love

Enhance the form-filling experience with on-brand forms using advanced logic that dynamically responds to a customer's every input. Present only the field or fields needed next to ease effort, reduce errors, and collect more of the right information the first time around.

A screenshot of a form showing a list of football teams and a 'Goals scored in the' section. The teams listed are 'Crystal Palace', 'Manchester United', 'Liverpool', and 'Tottenham Spurs'. The 'Goals scored in the' section shows a bar chart with values for each team. The form includes a 'Submit' button and a 'Cancel' button.

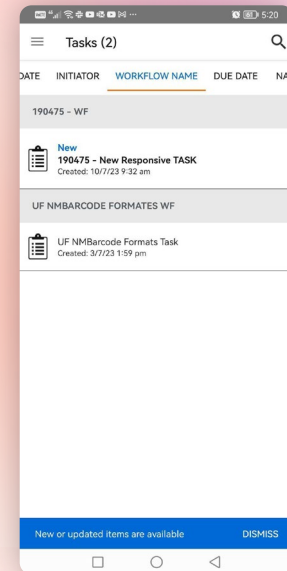

Manage forms data natively

Easily design forms from tables and store submission data natively in Nintex — no reliance on SharePoint or external systems necessary. Gain full control, flexible access, and the ability to initiate or update processes based on form data changes. Simplify your stack, cut costs, and drive efficiency from a single forms and workflow solution.

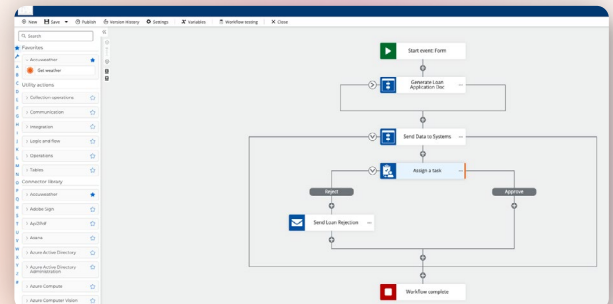

Capture data with mobile forms

Capture data on any device, from anywhere online or offline, with mobile-ready, responsive forms. Empower customers, employees, and stakeholders to complete, submit, and receive forms quickly and easily. With the Nintex mobile app, complete forms with or without an internet connection. Easily add custom branding and features to your mobile app.

Automate forms-based workflows

Create forms that kick off review and approval workflows. Drag and drop forms actions directly into your Nintex workflows to automatically assign form tasks, collect e-signatures, or generate and send a completed form. Enable team members to approve vendor contracts, collect client feedback, and more.

At Nintex, we believe intelligent automation can remove friction from work and inspire teams to build a culture of efficiency that accelerates business success.
