Toray ACS, Inc

Bridging the Gap in Apparel Design

In our conversations with many apparel companies, we have heard a common refrain:

- "The modelist's design intent is not fully reflected in the CAD data."
- "Mistakes occur in notches and seam allowances."
- "Digitalization is not progressing, and processes remain dependent on individual know-how."

These challenges between modelists and CAD operators are not simply matters of operation or skill, but stem from "a lack of mechanisms to correctly translate and share design intent."

While many solutions aim for "integration" across the entire supply chain, true transformation cannot be achieved unless the operations on the ground themselves change.

Based on our apparel CAD expertise accumulated over many years, we provide solutions that bridge this "gap" and simultaneously improve design quality and operational efficiency.

Our Fashion Solutions

Directly improving the "hands-on processes"

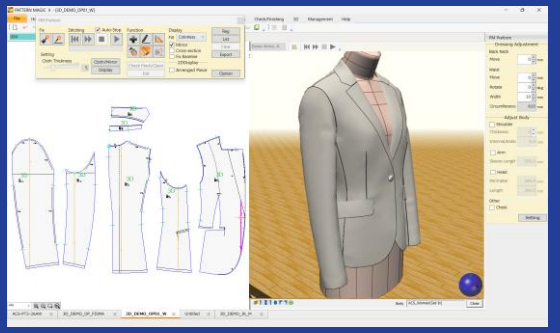

CREACOMPO® GLOBAL

Pattern making

Intuitive controls make the software easy to use, even for beginners.

3D design simulation

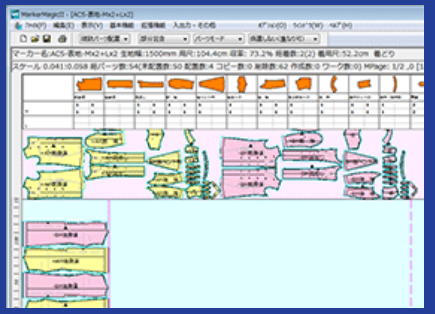

Simple operations enable toile checks and corrections in a short time, achieving reduced lead time and cost savings.

Grading

Creates high-quality size ranges without compromising the design or silhouette.

Marker making

Achieves "reduced working time," "fewer mistakes," and "improved yield."

Tech Pack

Solves problems such as duplicate work, missed revisions, and transcription errors.

Our Strengths

Project success depends not on mere system implementation, but on whether transformation of on-site operations is achieved. While many solutions offer integration and visualization, the challenge remains whether they will continue to be used in actual operations. We take responsibility not just for "implementation" but also for "sustained adoption and the delivery of results," ensuring the realization of business value.

01 Ease of Implementation

Large-scale system implementations generally carry risks such as "misalignment with operations," "resistance among frontline staff," and "prolonged implementation." We minimize these risks through an approach that starts small and delivers reliable results.

02 Ease of Operation

The biggest challenge many projects face is ending up with a "system that goes unused."
We achieve high utilization rates and sustained use in day-to-day operations through "business fit," "ease of operation," and "operational support."

03 Delivering Results

ROI (Return on Investment) is generated not by system cost reduction, but by eliminating operational waste.
We anticipate immediate results particularly in the following areas.

- Reduction in the number of sample corrections
- Reduction in verification man-hours between design and production
- Shortened product launch lead time

Our Track Record

Since 1976, we have led the development of Japan's first computerized apparel grading system. Over the years, we have developed a range of products including fashion CAD and tech pack software, and have also provided IT solutions. Throughout this time, we have worked closely with craftsmen in the apparel industry, continuing to innovate in garment manufacturing through ongoing research and development, and providing forward-looking products and services.

Approximately **60**% share of the Japanese market

Users located in approximately **30** countries

More than **27,000** licenses sold

Launch of CREACOMPO® in **1998**

Corporate Outline

Corporate Name	Toray Advanced Computer Solution, Inc.
Established	October 1st, 2000
Paid-in Capital	300 million yen (wholly owned by Toray Industries, Inc.)
Shareholder	Toray Industries, Inc.
Head office	5th Fl., oak Kandakajicho, 3-4, Kandakajicho, Chiyoda-Ku, Tokyo 101-0045, Japan
Main Business	• Planning, development, marketing, and maintenance of apparel system (CREACOMPO®, XIFORM®) • Consultation on system implementation of plan, design and production management
