USING DELLA IN YOUR LANGUAGE

Introducing Della's groundbreaking multilingual, question answering approach to contract review

HOW DELLA'S MULTILINGUAL CAPABILITY WORKS

Della's AI is built on a 'massively pre-trained language model', which understands how real people speak, taking into account the syntax and grammar of a query.

Instead of many small models trained to detect specific clauses or data points, Della uses a single model, which has been trained on hundreds of thousands of questions to perform in-depth analysis and review.

Della has already been used in 20 languages* for legal contract review and continues to be trained on more and more.

What does this mean in simple terms?

Let's imagine you have a checklist of questions in English and you need to review a Japanese document. Using Della, you can analyse the Japanese documents against your checklist and get the answers to your questions, in English.

Della can be trained quickly on new languages, with guidance from local counsel to verify the accuracy of the answers. We've had great success in terms of accuracy so far in many European languages as well as Japanese.

WHY DELLA?

Della is easy to use

Anyone can use Della, no technical skills are required and you can learn to use the system in less than 10 minutes.

Della becomes more efficient over time

Della's models learn directly from any interactions and corrections, allowing users to review documents faster and more efficiently every time they use it.

Della is affordable

Through Della's unique 'transfer learning' system, smaller law firms can leverage the tool for sophisticated contract analysis without having to train their own models, saving both time and money.

Della is multilingual

Della can analyse documents in English, French and Dutch and can answer questions in more than 20 other languages.

Della becomes smarter over time

Della uses cutting-edge massive language models to power its AI, and an innovative 'transfer learning' system, which allows users to share training securely to ensure that Della gets smarter every time it is used.

*English, French, German, Dutch, Spanish, Italian, Portuguese, Japanese, Turkish, Russian, Bulgarian, Polish, Swedish, Mandarin Chinese, Vietnamese, Romanian, Welsh, Afrikaans, Croatian & Catalan

HOW ACCURATE IS DELLA'S MULTILINGUAL CAPABILITY?

A USE CASE

An Austrian law firm wanted to test how accurate Della could be at reviewing Austrian leases.

The firm put together a list of 77 questions that needed to be answered. They wanted to see whether they could use Della for the following use cases: multi-jurisdictional lease review and reporting, mass document review, contract risk assessment and repapering.

CONCLUSION

It took a very short period of time to train Della's model to a high degree of accuracy on a completely new language.

FIRST ANSWER ACCURACY*

Phase 1:
50% questions answered correctly

Phase 2
82% questions answered correctly

Phase 3
89% questions answered correctly

*In this example there were 50 Austrian documents per batch.

HOW CAN DELLA'S MULTILINGUAL CAPABILITIES BE USED?

M&A Due Diligence

Use Della on multijurisdictional due diligence projects to speed up contract review and detect potential problems early on.

International finance

Summarise long finance agreements in multiple languages and detect if they are compliant with regional policies.

Cross-border deals

Use Della's unique translation feature to overcome translation challenges with multilingual audits, employment, post-merger integration and regulatory compliance.

International compliance

Della can be used to navigate business uncertainty in the wake of Brexit. You can apply the same checklist of questions in English onto mulitlingual documents to detect regulatory red flags.

Intellectual property

Identify the representations, license and obligations applicable to data and IP ownership, regardless of the language of the paperwork.

Multilingual real estate review

Review leases, sub-leases and amendments regardless of their orginal language and extract the relevant information in English into Excel.

TRAINING DELLA IN A NEW LANGUAGE

1. Load your documents

First, you load a document in any language, a lease agreement for example, into the Della Platform.

2. Create your checklist

Then you compile a list of questions that you need the answer to or use a template that Della provides. You can save your template for future use.

3. Analyse your document

You then open the document you want to analyse, select your checklist and let Della work its magic.

4. Reviewing phases

This part is very important when training Della in a new language. You can mark when an answer is correct which helps our AI learn. If an answer is incorrect, you can check through Della's alternative answers or point it in the right direction.

Della usually requires a couple of review phases to reach optimum accuracy level. In our experience, Della needs on average 3 review phases to be trained on a new language.

5. Download your report

Aggregate your analysis and export as a Word document or in Excel as per your needs.

della

Della is a legal tech startup that will help you review your documents 4 x faster than manual review.
