# Tricentis Tosca Exploratory Testing

Reduce Business Risk

Exploratory testing is a process that enables testers to learn a product, design and execute test cases, and interpret test results simultaneously. Tricentis Tosca's Exploratory Test Assistant helps testers document the entire exploratory testing process using video editing, screenshots, and notetaking.

Exploratory testing, when paired with specification-based testing, has been proven to result in an increase in critical defects found in a product. Diversifying your testing with Tricentis Tosca's approach, helps to ensure your testing has covered all of your bases.

Provide Rapid Feedback

Exploratory testing allows agile teams to rapidly and reliably deliver comprehensive feedback about a product under test. Tricentis Tosca's Exploratory Test Assistant is a vital testing tool for agile teams to maximize the frequency of feedback and help succeed in any fast-paced development environment.

Capture Interactions

Enhance your exploratory testing experience by automatically recording all your mouse and keyboard interactions. Revisit your interactions by moving through them step-by-step. Effortlessly share all your recorded scenarios by exporting them as a PDF and sharing them with your developers.
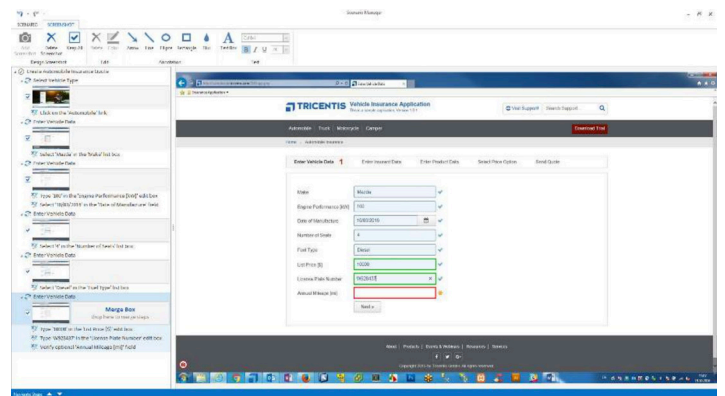

Documentation & Monitoring

The biggest drawback of exploratory testing is keeping track of the tests that have already been executed. Tricentis Tosca's intelligent approach removes this barrier by facilitating easy documentation of your actions over the course of your test.

Tricentis Tosca's Exploratory Test Assistant allows you to capture your exploration, and provides video editing functions to save the exploratory testing results that matter most. This enables you to easily share with developers the defects you discovered while testing. Additionally, the status and results of your exploratory tests, as well as your created artefacts, are available in a dashboard. This allows you to easily track improvements even in unstable software development environments.

Guided Exploratory Testing

Tricentis Tosca's Exploratory Test Assistant allows you to base your exploratory testing on existing manual and/or automated test cases, while still maintaining the freedom to explore. This enables you to get started quickly and to improve the power of your test cases with almost no additional effort

About Tricentis

With the industry's #1 Continuous Testing platform, Tricentis is recognized for reinventing software testing for DevOps. Through risk-based testing, scriptless end-to-end test automation, and the industry's most extensive technology support, Tricentis breaks through the barriers experienced with conventional software testing methods. Our innovative technologies simplify testing for even the most complex enterprise applications—transforming testing from a roadblock to a catalyst for innovation.
