

NITRO PDF PRO V26

What's New in Nitro PDF Pro

Nitro PDF Pro has been redesigned with a modern interface and AI built in to handle the heavy lifting for you. Everything you need to work faster is right where you need it—no complexity, just a better way to handle your PDFs.

A complete visual refresh

It's the same powerful PDF editor your teams rely on, made easier to use. Version 26 brings a cleaner interface, more intuitive navigation, and improved discoverability at any screen size.

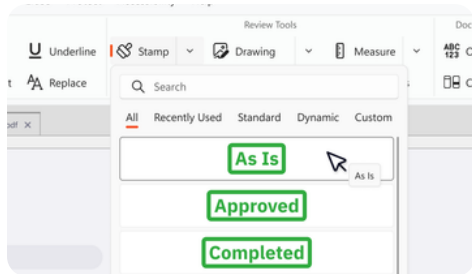

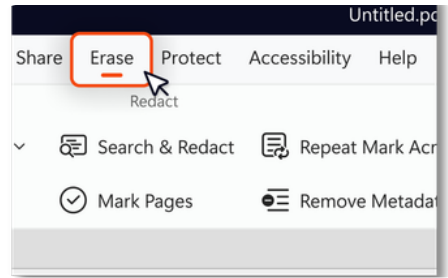

A modernized look and feel

Every tab across the product—and the Home Screen—has been redesigned with new icons, updated button styles, and consistent formatting throughout.

Improved placement of tools

Data-clearing capabilities like Redact and Remove Metadata now live together in one place, so the tool you need is where you'd expect it.

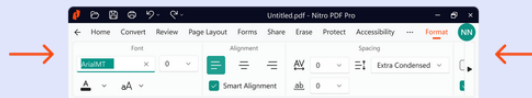

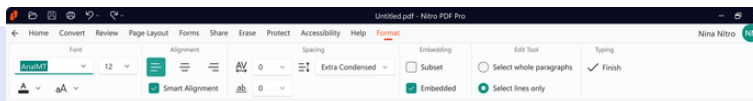

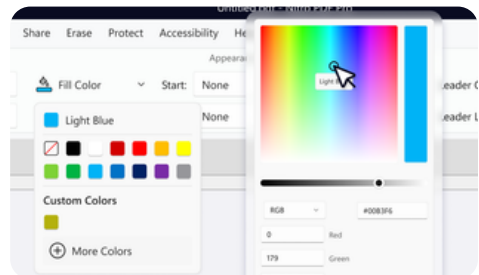

A redesigned Stamps panel

Stamps are now searchable and organized into dedicated tabs by type, so finding the right stamp no longer means scrolling through a crowded list.

A more intuitive color picker

Colors now display by name rather than hex codes, making formatting decisions faster and more natural.

Enhanced screen size responsiveness

As your window narrows, buttons collapse from right to left, keeping your most-used actions visible for as long as possible.

A new **Smart Tools** tab

Version 26 introduces a dedicated home for every AI-powered capability—giving you everything you need to analyze complex content in any language, extract critical data, and protect sensitive information.

The Smart Tools tab brings together:

Form Extract

Turn form data into structured, Excel-ready insights.

Table Extract

Automatically pull tabular data into clean, organized Excel files.

Form Create

Instantly transform static PDFs into interactive, fillable forms.

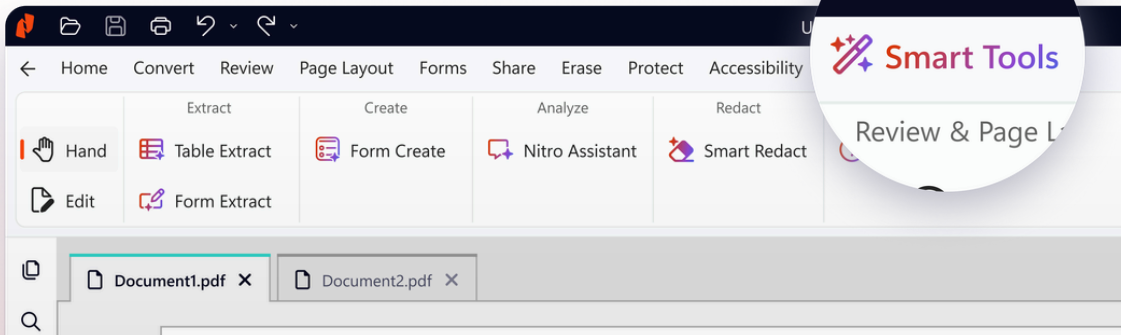

Smart Redact

Automatically detect and permanently remove sensitive information.

Nitro Assistant

Chat with your PDF to search, summarize, and translate in multiple languages.

*Smart Tools can be enabled or disabled individually through the **Nitro Admin Portal**, giving your organization control over which AI capabilities are available to your users.*

Feature improvements you asked for

You asked and we listened: Delivering better language support, improved compression, and a faster, more accurate OCR engine—improvements that solve real workflow challenges.

Enhanced PDF compression

Significant improvements to compression technology deliver smaller files without sacrificing quality. With streamlined optimization settings, creating well-structured PDFs for sharing and archival is easier than ever.

A new OCR engine

Delivering improvements to accuracy and speed, the new engine handles low-resolution and noisy scans with greater precision, reducing manual corrections and processing longer documents faster.

Right-to-left language support

Purpose-built for Arabic, Hebrew, and other RTL languages. Page Layout settings and Document Properties now respect RTL orientation, ensuring documents display and print correctly across all file types.

Ready to get started with the new Nitro PDF Pro?

Version 26 is a significant update for Nitro PDF Pro. A redesigned interface, a new dedicated home for every AI-powered capability, and a better compression and OCR engine—all in one release.
