Efficiency Driven HIMS for
Patient Lifecycle Management

WHY RESCRIBE:

Creating an Impact in Future of Healthcare Innovation:

Efficient Patient Lifecycle Management

Create a seamless structure of operational excellence through digital interface. Right from appointment booking to patient admission, treatment, discharge and post treatment support services.

Swift Departmental Communication

Facilitate inter-departmental workflow for increased response rate, better decision making with reduced errors. Entire hospital staff including doctors, nurses, admin and management, have real-time access to information.

Integrate Technology Driven Workflows

Implement a full-stack architecture which is self-configurable for ease of use. Single dashboard, real-time notification, integrated modules work in tandem for reduced operational inefficiencies. CRM and overall support is an inclusive part of our work.

Enhance Revenue Management

Build frictionless processes that increase topline with reduced cost of operations, makes for sustainable healthcare mechanism. With smooth transition across departments, established patient lifecycle journey and regular monitoring and tracking, higher profitability for healthcare companies is determined.

Mitigate Pilferage Loss

Keep your inventory and assets in updated records to reduce any unforeseen loss due to pilferage, theft or error.

A robust inventory management module enables hospitals to keep track and avert any shortages that might have a direct business implication.

Precautionary and preventive care

Initiate a proactive culture with patient's lifecycle being managed at the hospital, not just till treatment, but even beyond that.

Suggestive precautionary and preventive care inclusion for patients leads to better reviews and increased patient satisfaction

Reduce patient dropouts

Provide a care-driven experience to patients that gives them the comfort to conduct all tests, procedures and consultations at the hospital and reduced any possibility of switching to competitor or neighbourhood service providers.

Strengthen Control Access

Become vigilant by sharing right access controls with the relevant authorised personnel, to remove any mishaps of mismatched numbers. Give ownership to team members at different stages of approval, that increases accountability with responsibility.

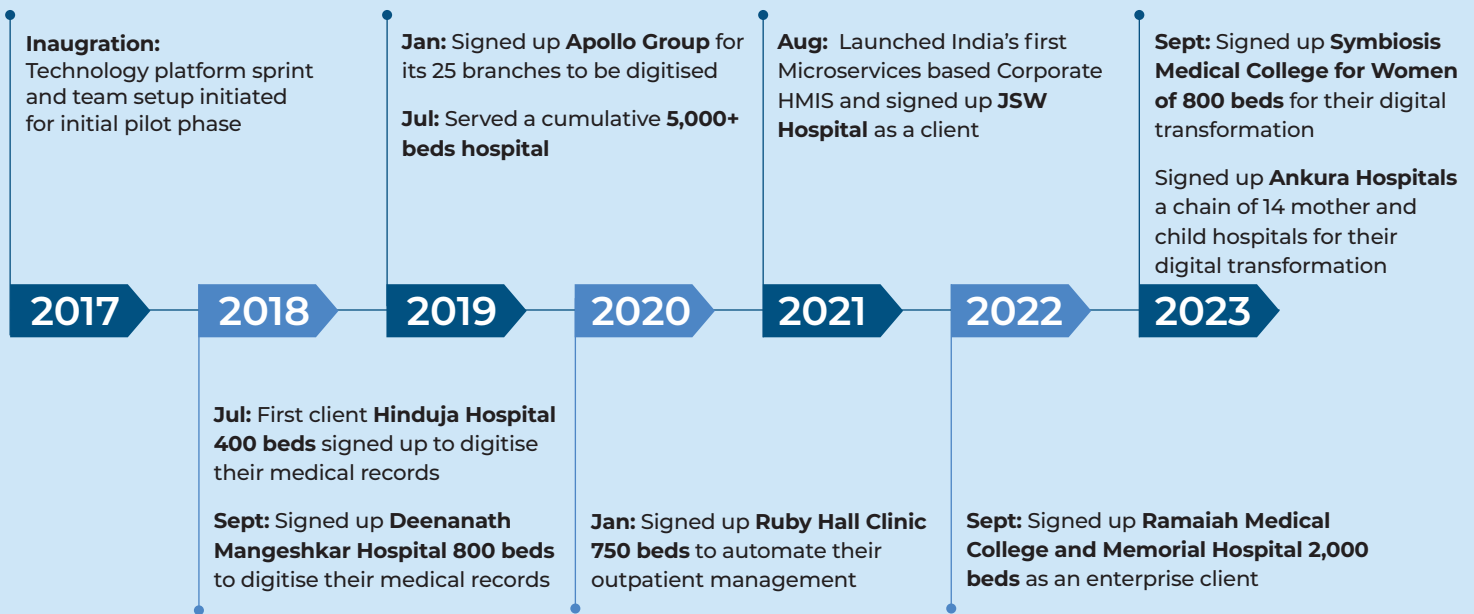

Overall Real-time Visibility

Ensure all quality and financial metrics are available on a single dashboard, with data that can be mined for further insights and intelligence delivery. Create indicators that drive performance across departments and deliver action oriented goals.

Patient Experience

Client Synopsis

Vanita Multispeciality Hospital is a 100 bed, greenfield project that is fully equipped with State-of-the-art ICUs, Modular Glass Operation Theatre, High End Cath Lab, MRI, CT etc.

With the Founder Dr. Bhushan Somani having exposure of how world-class care enables faster recovery, and smooth hospital management, they were keen on implementing an HIMS that is not just user technologically adept but more human than others.

Why Rescribe for Vanitha Hospital?

The Need:

-  Superior patient experience
-  Real time monitoring of all business functions
-  Advanced technology for business growth
-  Endure complete accountability at each stage of patient journey
-  Training in local language with ease of implementation

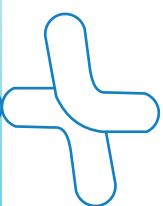

Rescribe's solutions offered them the benefit of:

- Personalised deployment to suit each department need
- Alignment across departments for effective patient journey
- Staff training conducted in local language along with dedicated training to IT manager
- Standard product implemented yet flexibility employed for new additions and changes

Rescribe implications:

-  Removed resistance from manual to tech based operations
-  Increased inter-departmental conversion rate overall
-  Cumulative 45yrs+ experience at client disposal

Rescribe's HIMS solutions have made Vanitha Hospital supercharged with technology that blends with human needs.

Your Bridge to a Healthier Future!
