

Microsoft SharePoint

Bring your SharePoint to life. Actively bring existing SharePoint content to employees' attention using any available screen and device within your organization. Generate more traffic to SharePoint and easily increase intranet visits.

Increasing SharePoint usage is challenging, as employees actively have to visit your SharePoint site. Employees might be too busy or even lack the means to visit SharePoint. Why not turn it around? Instead of trying to get people to visit SharePoint, bring SharePoint to them. Automatically present the latest and greatest of SharePoint to your staff, without additional workload for content creators.

Instantly **increase** SharePoint visits

With our Sharepoint integration, your SharePoint content will no longer go unnoticed. Important messages are automatically brought to everyone's attention, and full SharePoint articles are now just one click away.

Put a spotlight on SharePoint

Get your money's worth out of SharePoint by driving people to actively use SharePoint. Guide employees to relevant content and personalized news with just one click.

Automated updates prevent double entry

Save time and money by efficiently redistributing existing SharePoint content. Information is automatically updated, greatly simplifying the content management process.

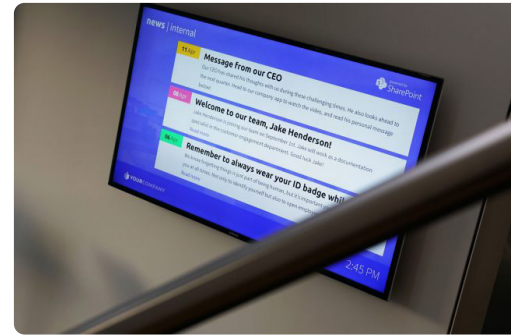

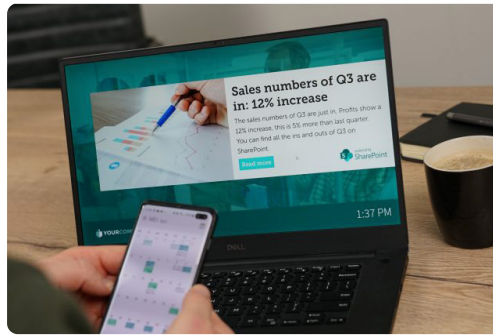

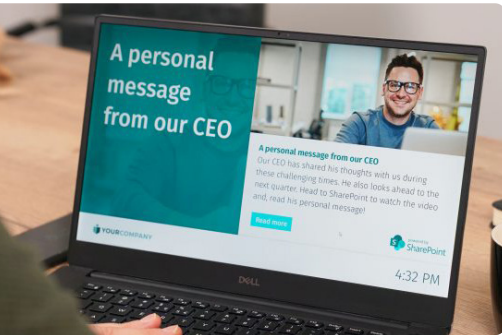

Bring SharePoint outside corporate walls

Ensure your intranet is accessible to everyone. Share relevant news and important headlines on mobile devices and keep employees without access to a PC in the loop.

See this **integration** in action

Netpresenter leverages every screen within your organization to make sure you can reach your entire workforce. Your content will automatically be scaled to fit different devices and screen sizes.

“

“The **popularity** of and traffic to our **intranet** has increased considerable since we started using Netpresenter”

Niels Dekker

Public Affairs & Communication Manager at RWG
