SUPPLY CHAIN APP STUDIO

Deliver AI to Those Who Need It Most

As the rate of change accelerates, organizations struggle to push AI beyond strategic insights into practical applications serving those on the front lines. For many, external change is quickly outpacing supply chain agility. Decision makers are increasingly challenged to answer questions without full confidence in their choices.

Coupa Supply Chain App Studio streamlines the process of connecting the dots between data, domain expertise, and science for rapid supply chain decision-making across the enterprise. Supporting data-driven decisions at all levels in your organization, App Studio deploys purpose-built apps to those who need them most. Part of Coupa Supply Chain Design & Planning powered by LLamasoft, App Studio bridges the gap between business and science through a no-code environment leveraging data from across your systems, data lake, and external data sources.

Paired with a deep algorithm library and/or open-source technologies, delivering production-grade, scalable, and reusable applications for your business has never been so easy.

App Studio's purpose-built apps provide business users the ability to see input data, ask questions, interact with visualizations, and share information among all relevant stakeholders across the enterprise. Applications may also be configured to distribute results to other systems or processes, efficiently pushing these data-driven decisions into immediate action.

PERSONALIZED EXPERIENCES

Supply Chain App Studio
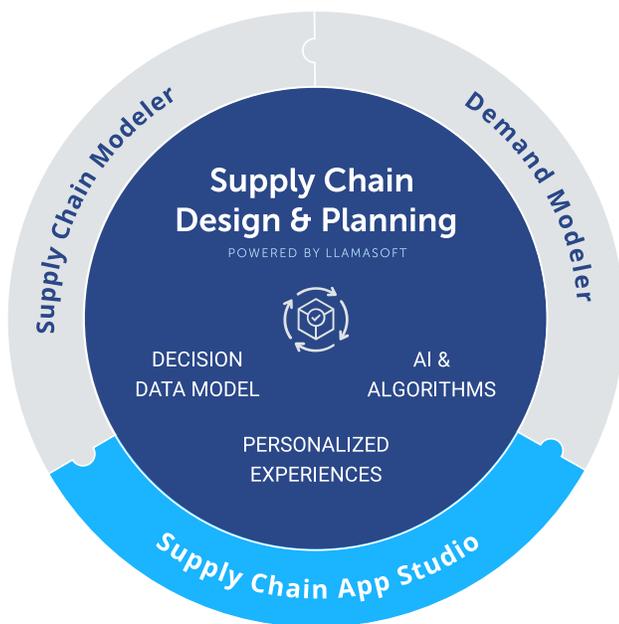

Effortless Power: Deploy applications in a no-code environment, powered by Coupa's advanced algorithms and/or your own custom algorithms.

Rapid Value: Accelerate time to value through the use of an automated data infrastructure and streamlined interface development.

Deployment Hub: Manage enterprise deployment and support of purpose-built apps.

Adopt continuous supply chain design and planning

Coupa Supply Chain Design & Planning powered by LLamasoft delivers the science behind smarter, faster supply chain decisions.

Built exclusively for analysis of the extended supply chain, it harnesses advanced algorithms and a digital model of your extended supply chain for facilitating experimentation and trade-off testing to uncover what affects both tactical and strategic decisions.

Get in on the revolutionary impact AI is having on operations, strategy, and competitive gains.
