

Bare Metal. Cloud Speed. Optimal Experience.

*Maxihost empowers companies to efficiently deploy
bare metal servers through software automation,
delivering an optimal user experience.*

Maxihost enables an optimal user experience.

We offer high-performance, **Bare Metal** to support the infrastructure needs of business across **multiple geographic regions**.

Our **state-of-the-art hardware** with advanced processors supports a range of workloads, including ones that require higher scalability and core density.

We bring **automation** and **cloud functionality** to bare metal servers, enabling easy, rapid provisioning, management, scaling, and optimization.

Our reliable, secure, **low-latency network** allows companies to ensure a seamless user experience for their customers.

We help our clients with **custom deployments**, from hardware procurement to network connectivity.

You can deploy one or hundreds of servers in **less than 10 minutes** across different locations. Scale up or down without commitments and get **billed by the minute**.

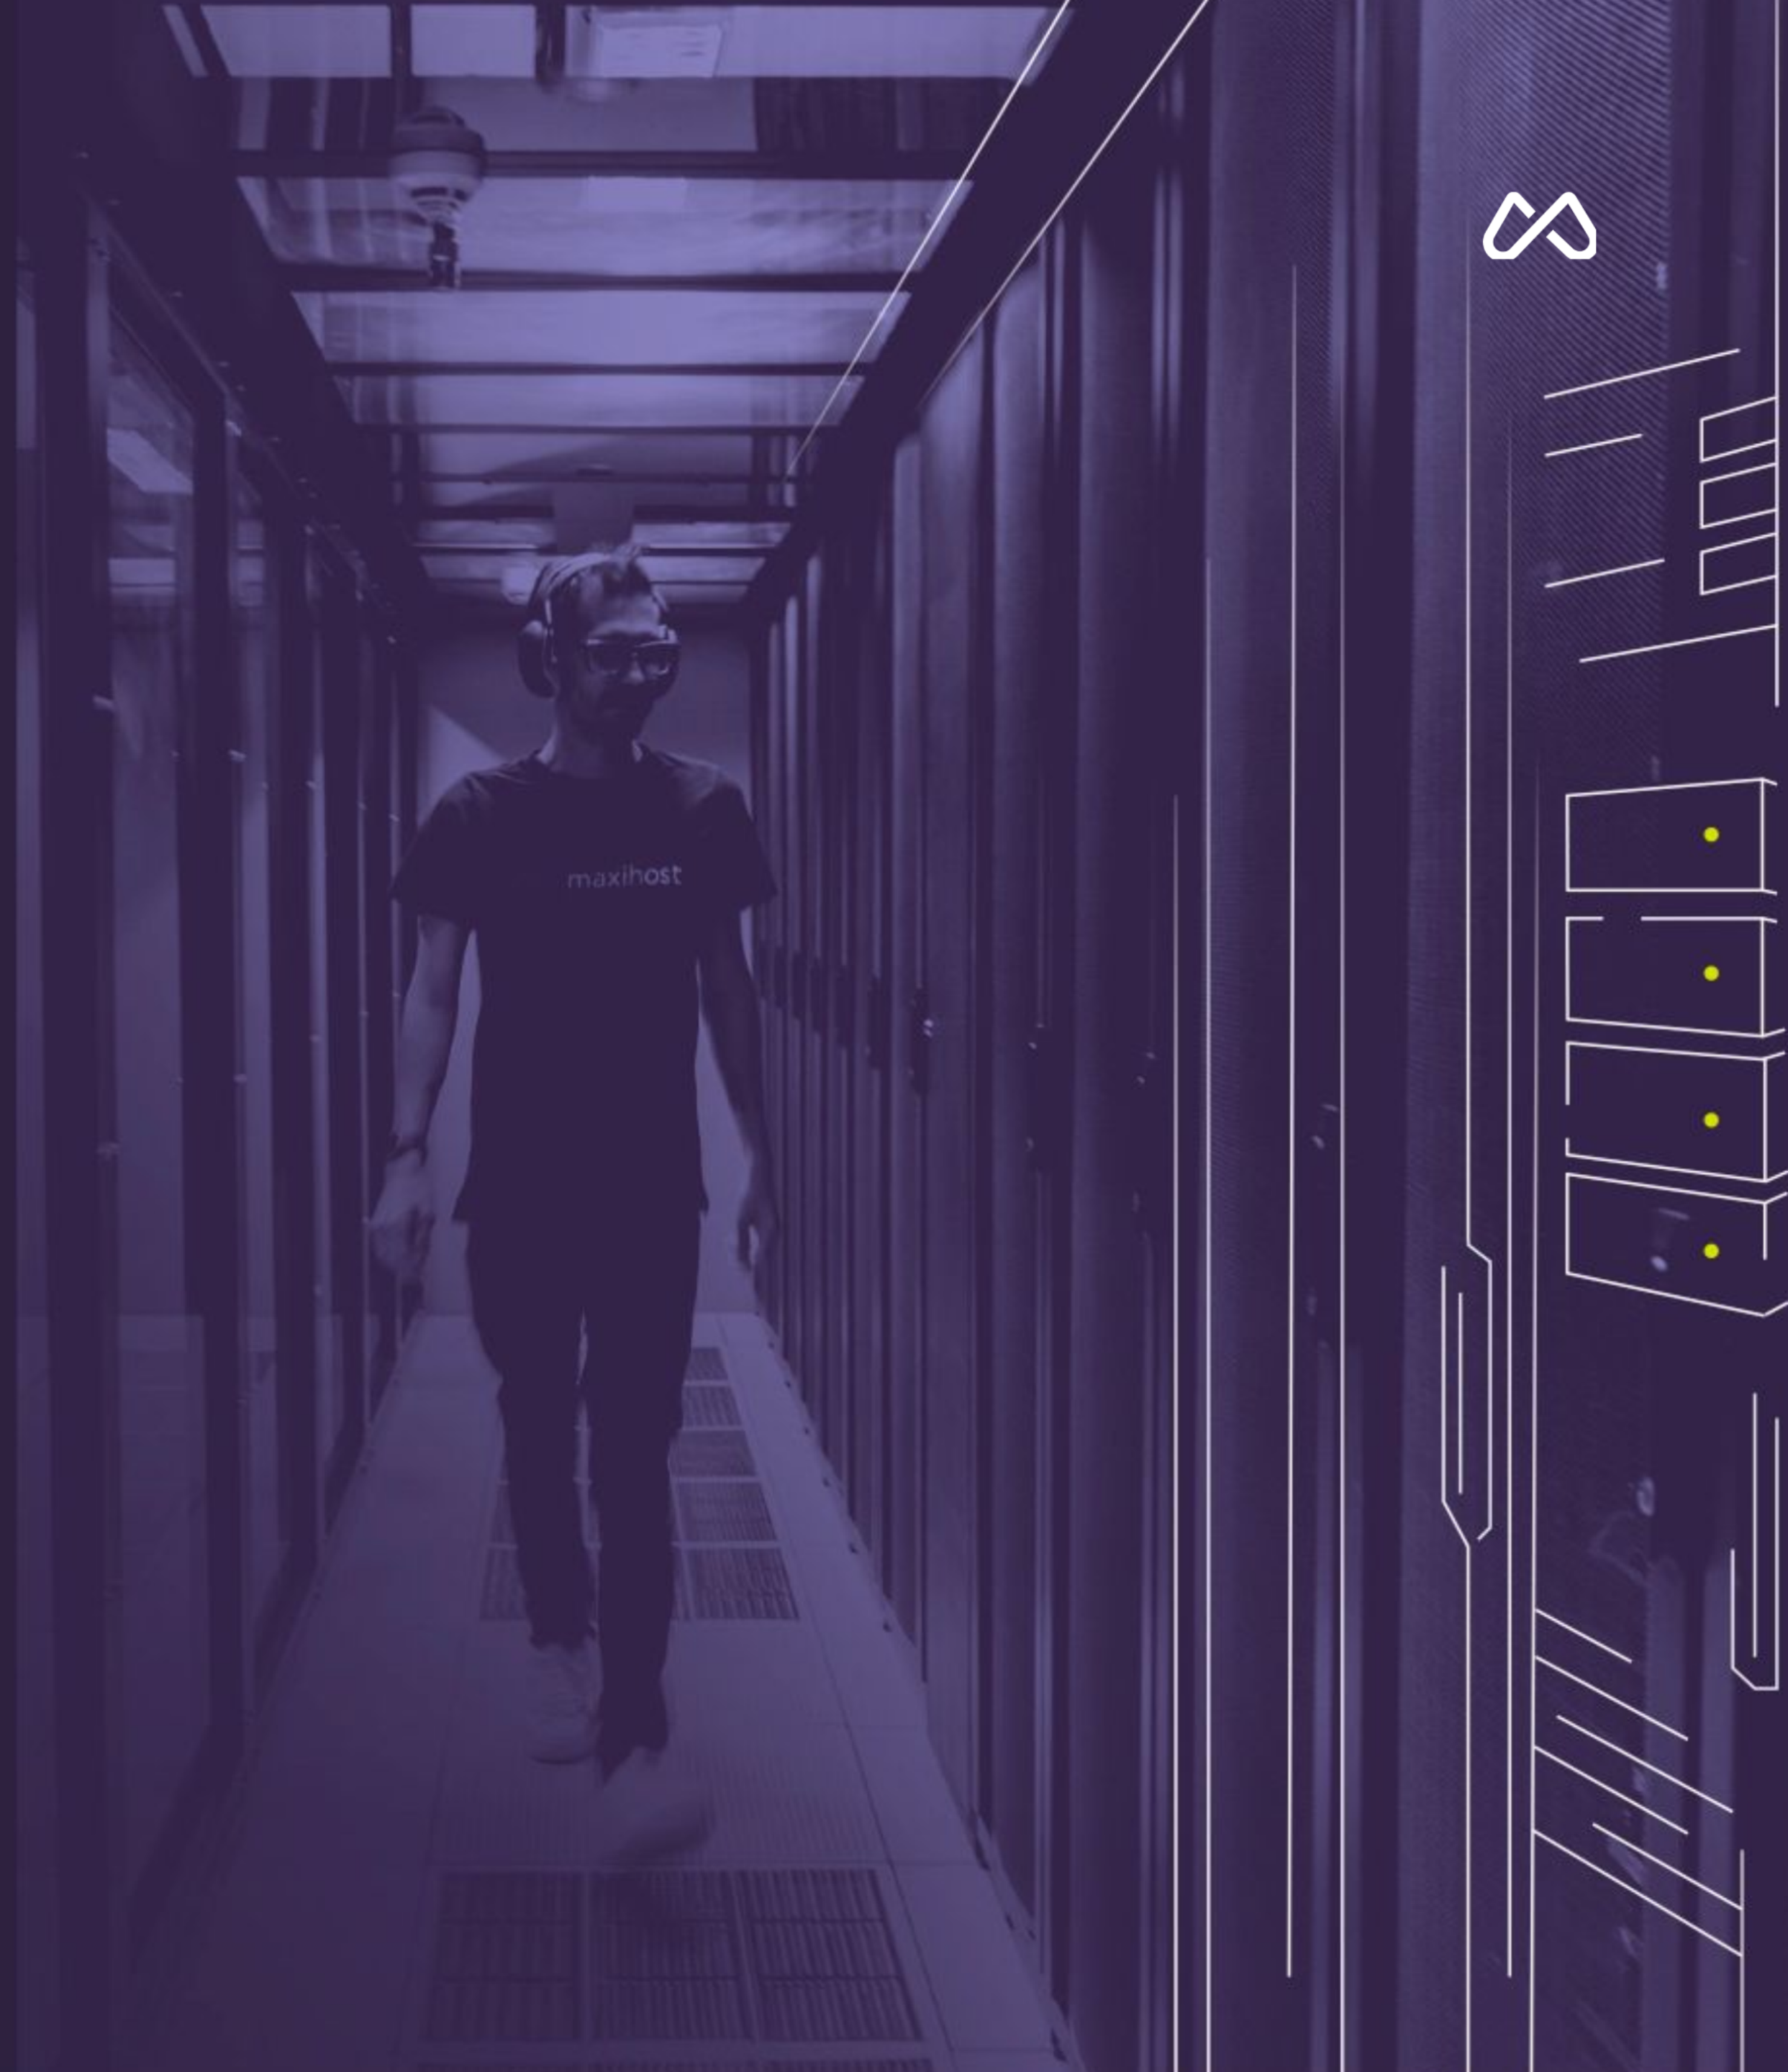

Bare metal servers

Dedicated Hardware with an automation system that combines the agility and scalability of the cloud with the power of bare metal.

Our powerful, rock-solid hardware delivers the raw processing power needed by processor-intensive and disk I/O intensive workloads and comes with an unmatched level of automation and flexibility. With Maxihost Bare Metal, you can scale your configuration to meet your demands, make changes in just seconds, and adjust your infrastructure to meet your evolving business needs.

- ✓ Automation System with multiple functions
- ✓ APIs to integrate the servers with your systems
- ✓ Manage multiple regions from the same workspace
- ✓ DDoS protection
- ✓ A reliable, stable and excellent connected network
- ✓ 20 TB of egress bandwidth (ingress traffic is always

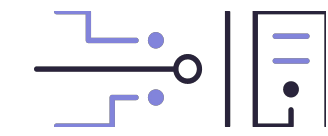

Our network

To guarantee **high performance, low latency, stability, and scalability**, we design and manage our network in every region we have a presence, using our own ASN that directly connects to Tier 1 providers. Our edge network infrastructure does not depend on third parties.

We have taken the same approach we use to automate our cloud and applied it to our network. The result is a **self-healing, performance-based routing network** that you can start using in minutes.

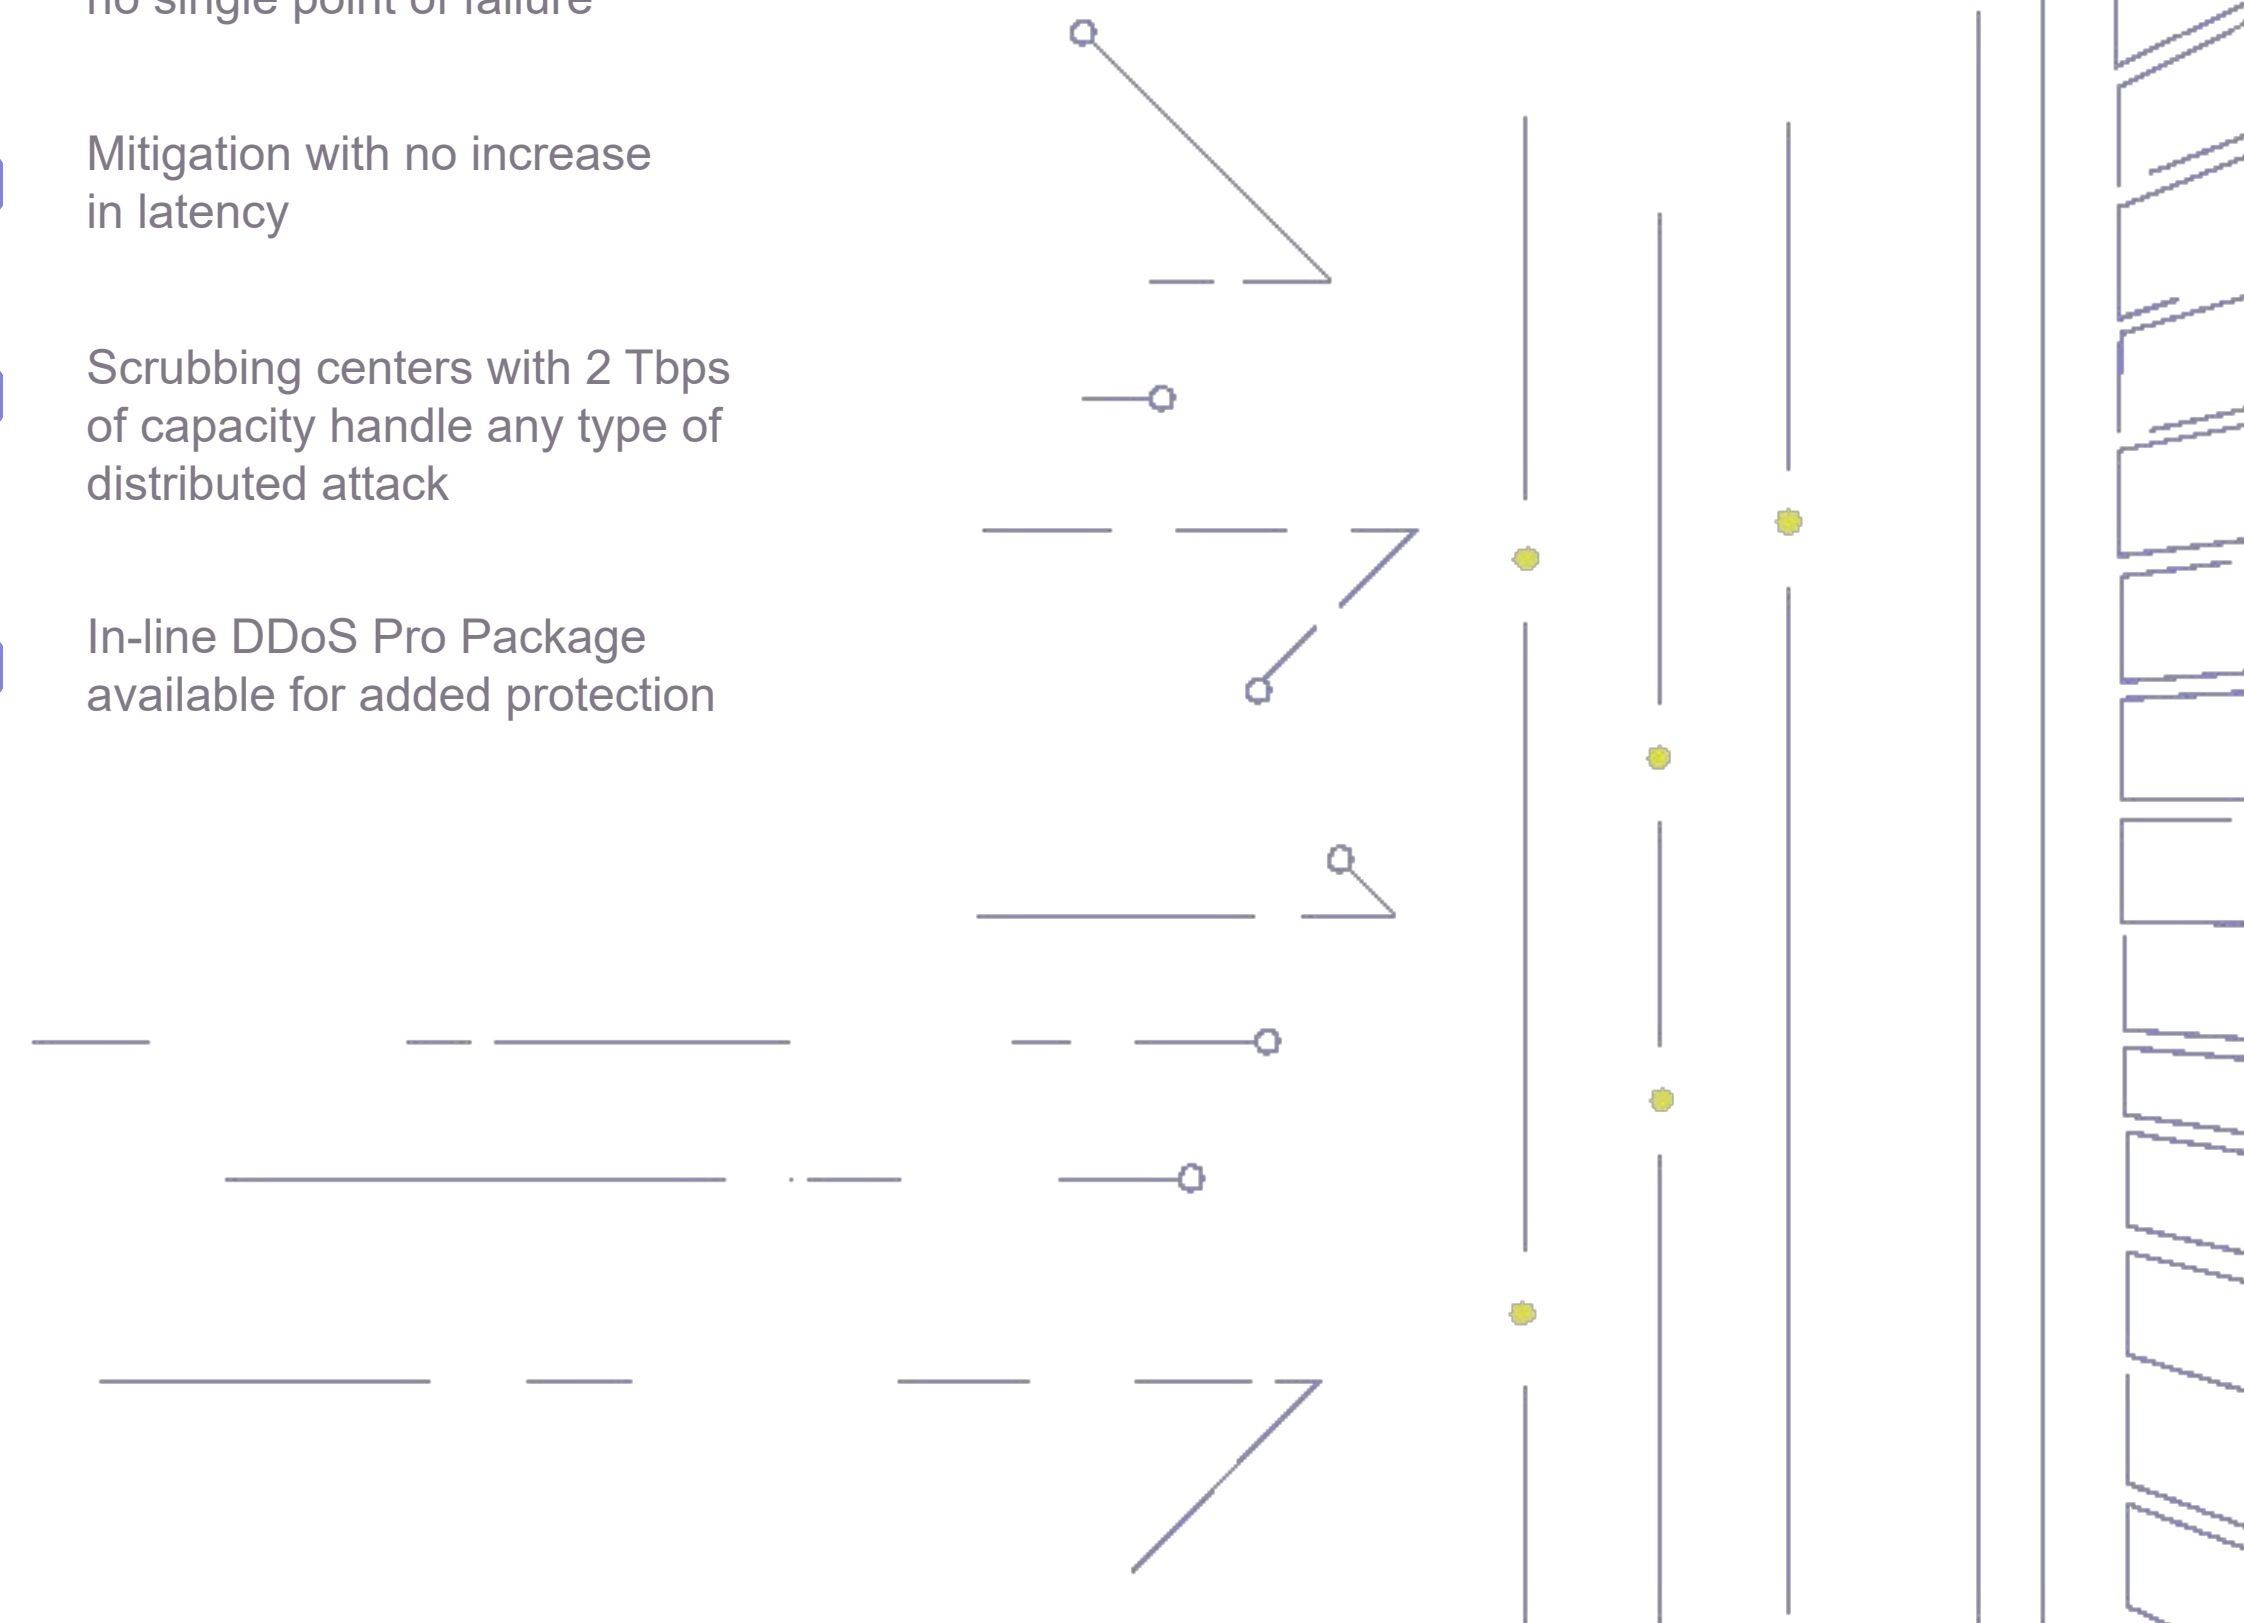

DDoS mitigation

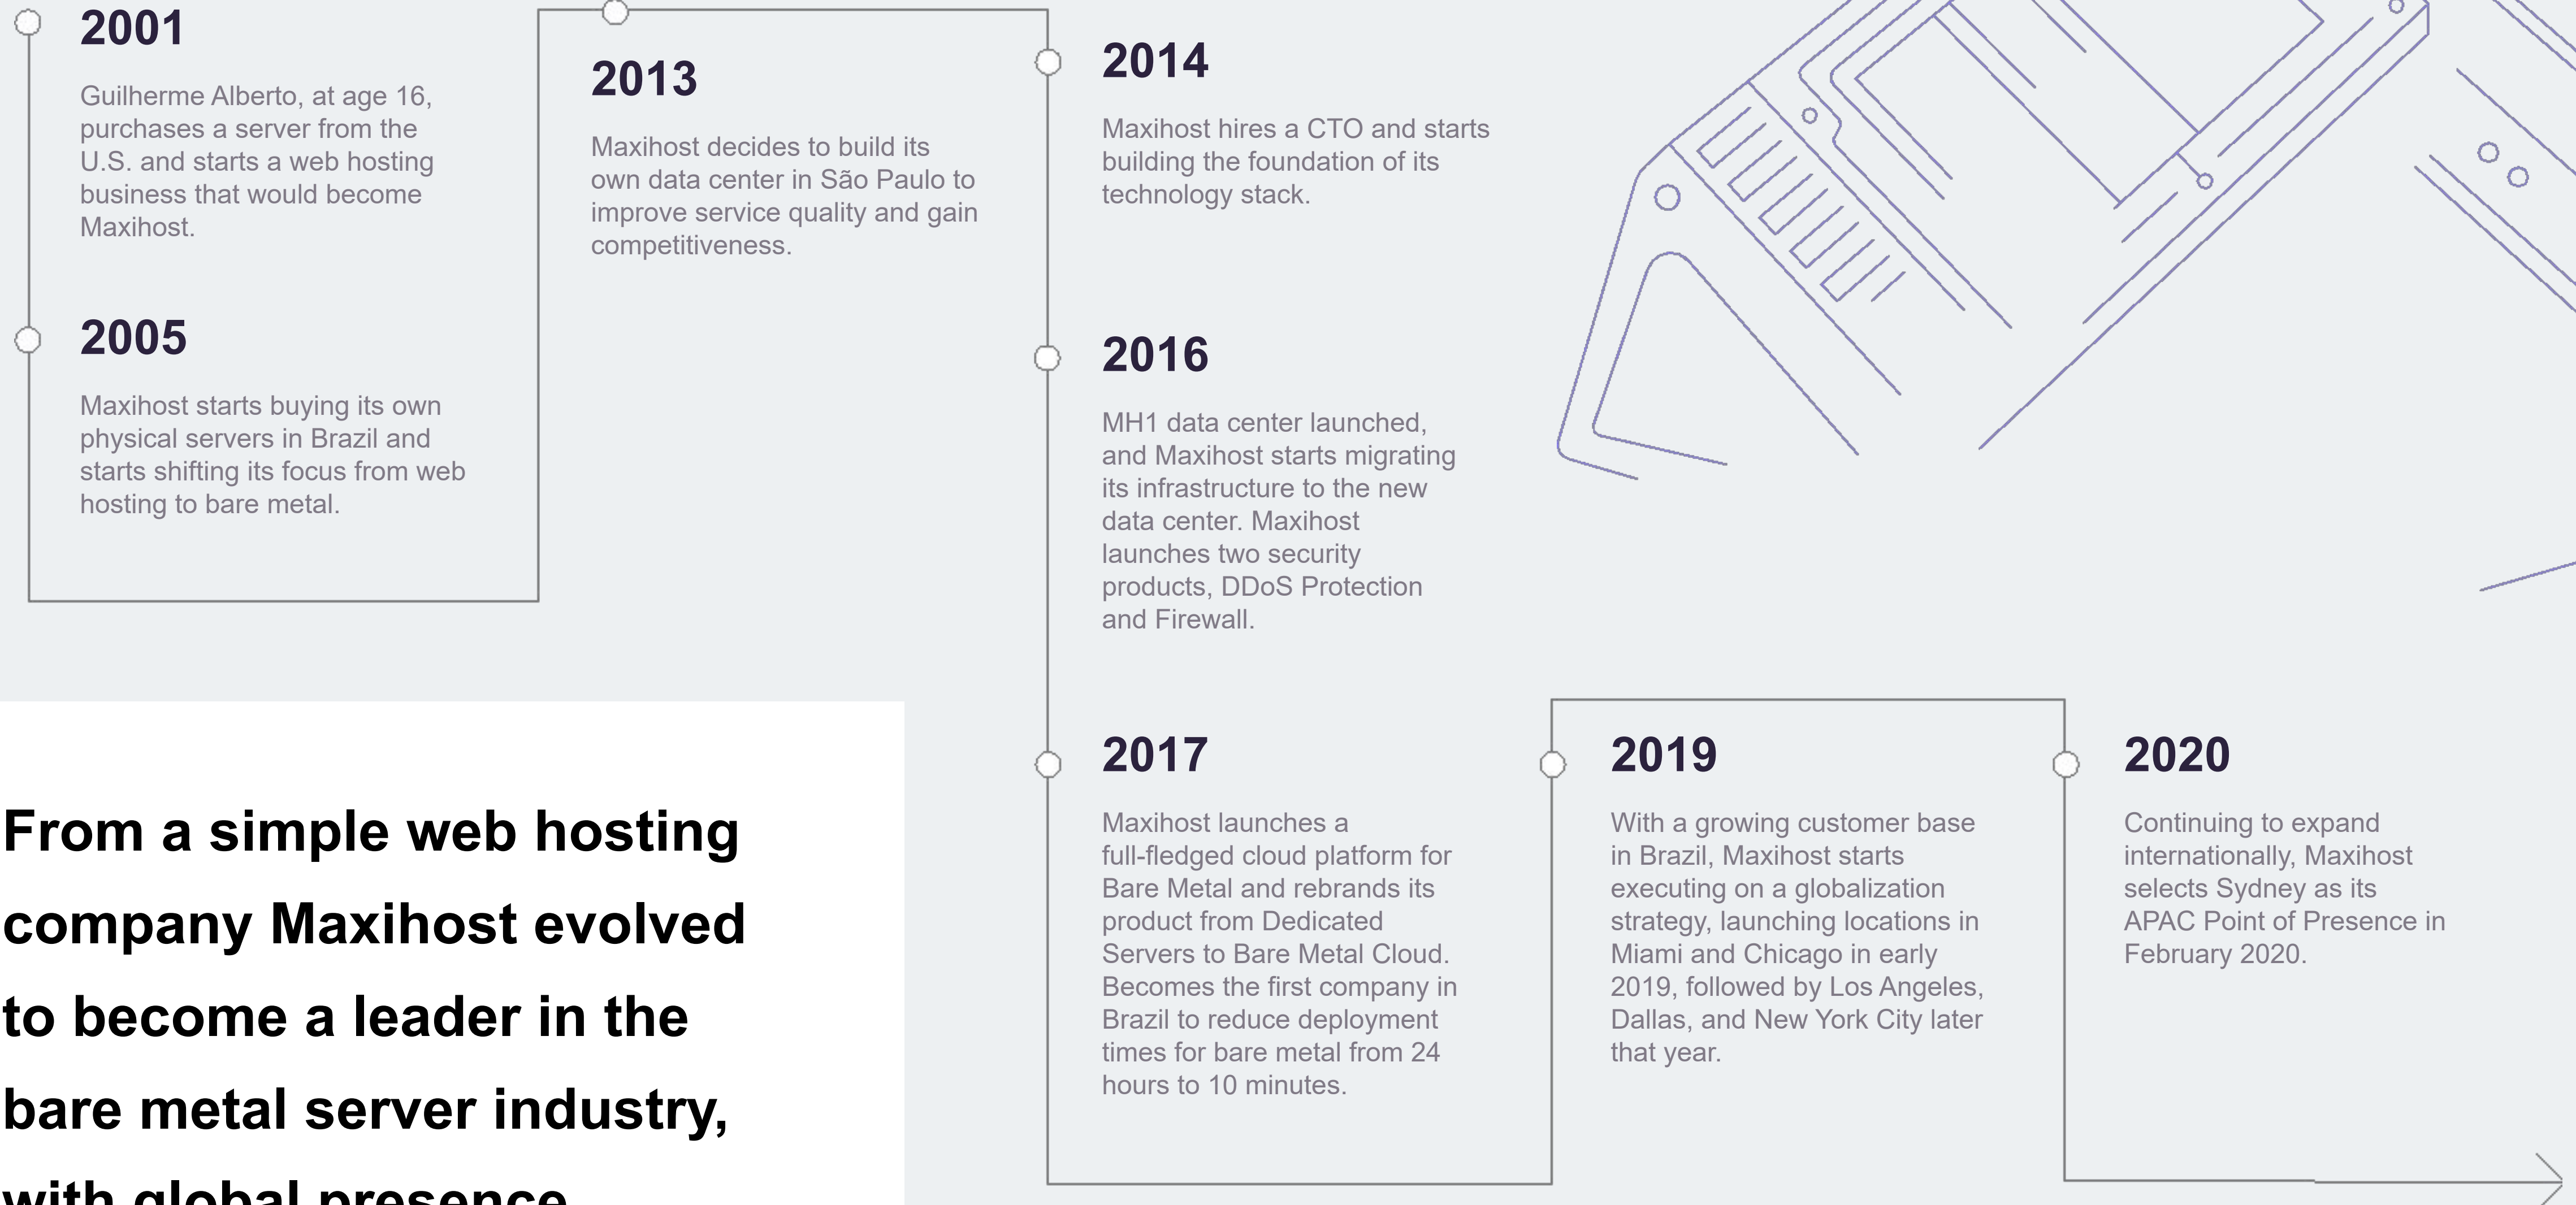

With more than a decade of experience supporting industries that are constantly under attack, such as the gaming industry, Maxihost has developed highly effective DDoS Mitigation solutions that protect your business from disruption.

- ✓ Default out-of-path topology ensures no single point of failure
- ✓ Mitigation with no increase in latency
- ✓ Scrubbing centers with 2 Tbps of capacity handle any type of distributed attack
- ✓ In-line DDoS Pro Package available for added protection

Our history

From a simple web hosting company Maxihost evolved to become a leader in the bare metal server industry, with global presence.

Maxihost is based in the financial heart of São Paulo.

Headquartered in the financial heart of São Paulo, Brazil, where the company runs a privately-owned, carrier-neutral data center with dedicated servers, Maxihost also offers colocation and custom deployment, helping customers establish a presence in Brazil.

Integrators

Maxihost global presence

Maxihost makes multi-region deployments easy through:

- ✓ Standardized product specifications
- ✓ Standardized offerings
- ✓ Direct access to Tier 1 networks and key exchanges
- ✓ Consistent level of personalized support

We believe there is a better way to work with infrastructure.

Our solutions help companies reduce their costs and increase the efficiency of their IT operations.

Contact us today to discuss how we can support your business goals.
