 **UPTICK**

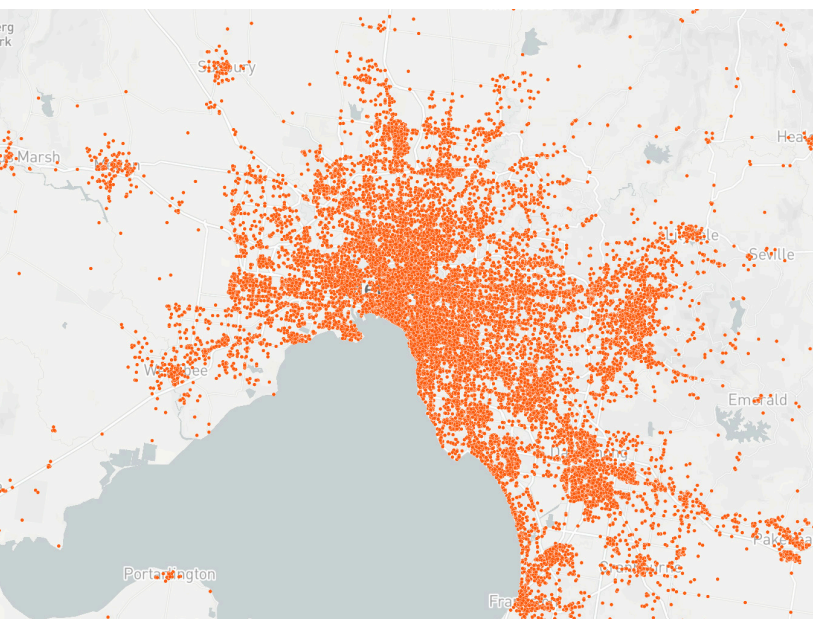

The future of asset protection.

The Uptick vision is to make real-time compliance the default in the asset protection industry.

We're building a global compliance network.

Every building will have a *digital compliance twin*, a single source of truth for all stakeholders, including the owner, facility manager, service provider, auditor and relevant authorities.

We believe this increased visibility and transparency will help the entire industry grow, and ultimately save lives by making buildings safer.

Scale you can trust.

Over 2000 technicians, servicing over 350,000 buildings and tenancies and billing in excess of 600M annually. All from audit and fire industries that trust Uptick with their data and business operations. You'll be in safe hands, and in good company.

"We've gone from under 40 staff to over 80 full-time staff. Revenue has increased threefold. The amount of staff, the volume of work, and the profitability has certainly increased exponentially."

- LinkFIRE

Get ahead and stay ahead with Uptick Workforce.

Easy-to-use innovative asset protection software.

Purpose built for the asset protection industry with built-in standards, smart business tools and advanced technology.

“We have found an efficiency improvement across our fire operations of at least 50%, which has translated into significant savings whilst providing better service delivery to our customers.”

– ARA Fire

bSECURE

A single source of truth for property compliance data; information instantly available where it is needed.

Geospatial Floorplans

Reduce technician time on-site and impress your customers with multi-level floor plans and asset registers.

Subcontractor Portal

Reduce the double-handling of information and get complete visibility of contracted job progress.

Customer Portal

Give your clients more than just downloadable PDF insights with a customer portal they will actually use.

Digital Logbooks

Go paperless and keep your compliance data safe with Digital Logbooks.

Project Management

Manage quoting, job stages and cost centers to run your projects profitably.

Remote Monitoring

Proactively monitor fire panels, don't wait for preventative maintenance inspections.

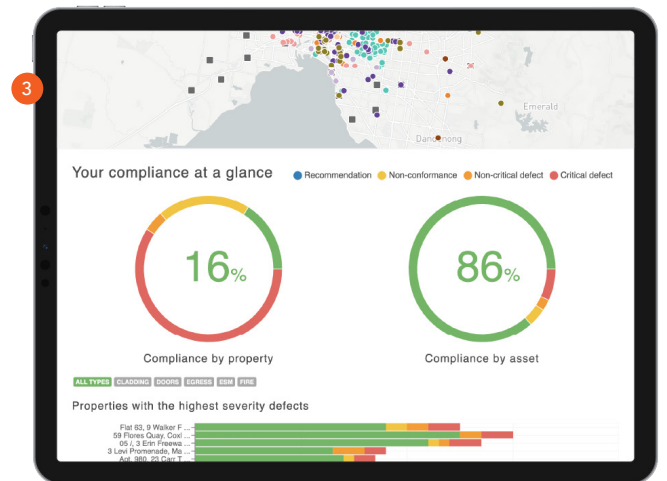

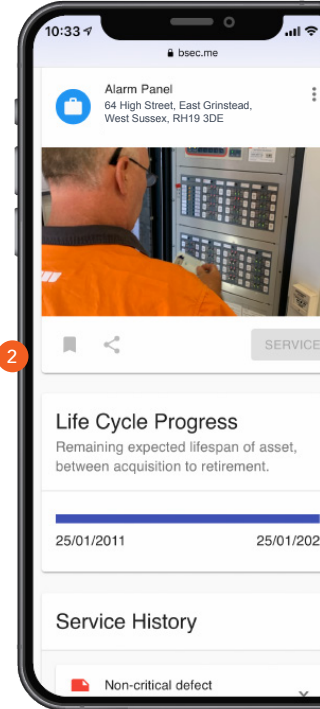

Business Intelligence

Spend less time compiling management reports, and more time actioning data.

State-of-the-art feature highlights.

Uptick are leading the charge and pushing the asset protection industry forward with leading technology.

- 1 Reduce technician time on-site and impress your customers with multi-level Geospatial Floorplans and asset registers.
- 2 Turn any asset into a digital "dropbox" with bSECURE. A single source of truth for property compliance data; instantly available where it is needed.
- 3 Give your clients insights, not just PDFs, by providing the ultimate level of transparency with a Customer Portal they will actually use.
- 4 Spend less time compiling management reports, and more time actioning data with a powerful BI Suite allowing you to visualise and analyse your data.
